CHAPTER XLIII.

PROFESSIONAL SCHOOLS.

The whole number of medical students for the year, of all classes excepting those in postgraduate schools, was 23,433, a decrease of 944 since the previous year. This is the first time in ten years that a decrease in the number of medical students has occurred, the annual increase heretofore being constant and appreciable. Whether the lengthened course of four years and longer annual sessions, with a corresponding increase in expenses, cause young men to reflect more carefully before entering upon medical study is left for others to determine.

Theological students showed an increase of only 200 during the year, and for several years the increase in this class of students has been very slight. It is doubtful whether it has equaled the growth in population.

It is difficult to account for the seemingly abnormal increase in the number of law students. In 1896–97 they numbered 10,449; this year their number is 11,615. A large increase has been regularly occurring for ten years, which shows that it is not an accidental variation. The ratio of increase during the last ten years has been 217 per cent, while medical students during the same length of time increased only 79 per cent, and theological students only 28 per cent. The increase in the number of dental students in ten years has been remarkable also, viz, 327 per cent. Is it not possible that the large growth in these two classes, law and dentistry, is attributable to similar causes?

In former years it was customary for young men to study law in private offices, and dental students frequently obtained all their training under a private preceptor. Scarcely any young man would expect to acquire his dental knowledge in such manner at the present time, but he now determines what dental school he will attend almost as soon as he decides upon dentistry itself. The many advantages of systematic study in a law school, and the almost absolute necessity of such method of study in those States where full written examinations are required for admission to the bar, have caused the discarding, to a large extent, of study in private offices. This seems to be the most plausible explanation of the large number of students of law and dentistry, after making due allowance for the considerable increase now noticeable in the number of young men entering the professions generally, not only in this country, but in others as well, particularly in Germany.

The diagram given shows the relative number of students of the different classes at three decennial periods—1878, 1888, and 1898. It will be seen that while the number of medical students in 1888 was nearly four times as great as the number in law, in 1898 it was only twice as great. The number of law students in ten years has risen much above the number in theology, and likewise the number in dentistry has nearly doubled the number in pharmacy. In 1878 there were fourteen times as many medical as dental students; in 1898 about three and one-half times as many.

LAW SCHOOL OF THE UNIVERSITY OF MAINE.[1]

The trustees of the University of Maine voted to open a law school October 5, 1898, in the city of Bangor, having a population of about 23,000; the university proper being at Orono, 9 miles distant. With no law school in New England north of Boston, the constituency to which it appeals is a wide one, and it is believed that there is abundant room for the development of a large and prosperous school.

In conformity to the requirements for admission to the bar in the State of Maine, the course of study has been arranged to cover two years.

CONSOLIDATION OF MEDICAL COLLEGES.

At the graduating exercises of the *Medical College of New York University* (in 1898), the chancellor, Rev. Dr. Henry M. MacCracken, announced that a consolidation of the medical department with the Bellevue Hospital Medical College had been effected, and that the resulting institution would be called "The University and Bellevue Hospital Medical College." Dr. Edward G. Janeway, it was stated, would be the dean of the faculty.[2]

Atlanta Medical College and the Southern Medical College have been united under the name of the Atlanta College of Physicians and Surgeons. For many years both of these schools have been in a very flourishing condition, and naturally both have been rivals for popular prestige. The Atlanta college was the older,

[1] Announcement, 1898-99.

[2] New York Medical Record, May 28, 1898.

Digitized by Google

and, in fact, one of the oldest in the South, while on the other hand, the Southern had already attained a high position for its thorough curriculum.[1]

The *Cleveland Medical College of Ohio* and the Cleveland University of Medicine and Surgery were united in May, 1897, under the name of the Cleveland Homeopathic Medical College.

Buffalo University medical department and the Niagara University medical school were consolidated in 1898. The faculties of the two institutions will henceforth work together under the charter of the University of Buffalo. This will add materially to the teaching strength of the institution, as the Niagara faculty brings not only a number of strong and experienced teachers, but also a quantity of valuable apparatus, books, pathological specimens, and a great amount of material for clinical instruction.[2]

Rush Medical College[3] entered into relations of affiliation with the University of Chicago in April, 1898. One of the conditions precedent to affiliation was the removal of a debt of $71,000 against the college. This was raised by the gift of $25,000 each from Dr. Nicholas Senn, professor of surgery, and Dr. Ephraim Ingals, professor emeritus of materia medica and therapeutics. The remainder of the debt was raised by subscription from the other members of the faculty. In view of the generous gifts of the above-named gentlemen, the trustees established the Nicholas Senn professorship of surgery and the Ingals professorship of therapeutics and preventive medicine.

Rush Medical College has adopted the quarterly system in vogue at the University of Chicago, which will go into effect the present year.[4] The academic year will begin July 1, and will be divided into four quarters, designated the summer, autumn, winter, and spring quarters, and beginning on the first day of July, October, January, and April, respectively. Instruction will be given in all departments during each quarter, and the several courses will be so arranged that a student can begin his medical study at the commencement of any quarter, and continue it advantageously. He may continue in residence at the college as many successive quarters as he desires, but credit will not be given for more than three successive quarters. Attendance upon twelve quarters will be required for graduation, and at least forty-five months must intervene between the beginning of a student's first course of medical study and the date of his graduation.

CORNELL UNIVERSITY MEDICAL COLLEGE.[5]

The event of the year, and one of the epoch-making events in the entire history of Cornell University, was the establishment of the medical college. Ever since the university opened, its sanguine friends have dreamed of a medical department; but the treasury was always overdrawn for the support of existing departments, and no benefactor came forward with an endowment for a department of medicine. It is true that from time to time proposals were received for the federation of independent medical schools in other cities, but such unions offered no prospect for the advancement of medical education, and the university shrank from even a nominal connection with proprietary institutions whose ultimate object was economic and financial, not scientific and educational.

But if Cornell had no medical department, she cultivated with special zeal and assiduity those biological sciences which form the scientific foundation of the medical profession. Furthermore, this university recognized the indispensable importance of these sciences to the physician and surgeon at a time when—to

quote from Prof. Burt G. Wilder's writings in 1875—students of medicine were accustomed to hear "lectures upon surgery without any knowledge of anatomy, and upon therapeutics while ignorant of physiology." Indeed, within two years after its opening in 1868, Cornell University had arranged a four-years' course in natural history, leading to the degree of bachelor of science, which was well adapted to the needs of students who contemplated the study of medicine; and, in 1878, for such students as could not take this full course, a shorter two-years' course was provided, in which a large amount of time was devoted to practical work in anatomy, physiology, histology, and chemistry. Thus, Cornell University, from the beginning, has recognized and acted upon the first great principle of medical education, the principle so emphatically enunciated by Professor Huxley in his address to the medical students of University College, London: "I do not believe that all the talking about and thinking of medical education will do the slightest good until the fact is clearly recognized that men must be thoroughly grounded in the theoretical branches of their profession."

The theoretical branches of the medical profession have been well taught in the scientific laboratories of Cornell University, and they must be even more fully and thoroughly taught in the future. But medicine is an art as well as a science. The practical part of the curriculum presupposes hospitals, clinics, and dispensaries, which exist in sufficient supply only in a large city. If a medical course is given in a small city or village where these facilities do not exist, it is no better than the teachings of physics and chemistry without a laboratory. It follows, therefore, as a second principle of medical education, that for the purely professional subjects of the curriculum students should have access to the hospitals and dispensaries of a large city, which, in the case of Cornell University, should undoubtedly be the city of New York. The ideal arrangement would be for students to complete their scientific training in the extensive laboratories of the university at Ithaca and then take their professional branches under medical professors in New York who are entitled to utilize, for teaching purposes, the vast quantity and variety of clinical material found in the great city hospitals.

For Cornell University, therefore, situated as it is in a small city, the ideal of a medical department would be one which should be located in New York City, but which should at the same time utilize the scientific instruction offered in the academic department at Ithaca. In practice this means provision for a full four-years' course in New York, with the duplication at Ithaca of the first two years of the course—the scientific bases of medicine—anatomy, physiology, chemistry, bacteriology, histology, etc. For Cornell University, therefore, Huxley's saying is especially true, that "the question of medical education is, in a very large and broad sense, a question of finance."

Thanks to the generosity and wisdom of Col. Oliver H. Payne, this ideal is an actuality. A gift for the establishment and maintenance of a medical department of this university having been tendered to the trustees by him, it was, at a special meeting of the board, held April 14, 1898, voted to "establish a medical department in New York City, to be known and designated as the Cornell University Medical College, of which a portion of the instruction may be duplicated in Ithaca." Six professors were then elected to chairs in the new department, to which were subsequently added 5 more members of the faculty and 56 clinical professors, instructors, clinical assistants, etc. With this teaching staff of 67 in the medical college, assisted by the professors in the scientific departments of the university, the new department will begin its first year on October 4, 1898.

All the advantages of Cornell University, rural and urban, will be combined for the student of the science of medicine. The great hospitals of New York City, with which an unusually large proportion of the faculty are connected in the capacity of surgeons or physicians, make it imperative that the last two years of

Digitized by Google

the course should be taken by all students of the college in that city, where the opportunities of clinical instruction are literally unsurpassed.

To the student, too, who aims to excel in his profession, and to that end is not contented with completing the bare minimum of work necessary to obtaining his professional degree, Cornell University offers further encouragement. In the academic department the student has absolute liberty in the choice of studies, so that, if the future medical student enters that course he may, while cultivating letters and philosophy, at the same time master thoroughly his anatomy, physiology, histology, chemistry, physics, and botany, and at the end of four years receive his A. B. degree. There then would remain of the medical curriculum only the professional branches, which he could compass in the next two years in New York City. Thus, thanks to the elective system, he would win both the A. B. and the M. D. degrees in six years, though each separately requires four years.

A building in the grounds of the Bellevue Hospital has been leased from the commissioner of charities for the use of the medical college during the year 1898-99. A site for the permanent home of the department has been purchased at a cost of $150,000. It comprises the entire First Avenue front of the block lying between Twenty-seventh and Twenty-eighth streets, a space of 100 by 200 feet.

HIGHER TRAINING FOR MILITARY SURGERY AND SANITATION.

[By GEORGE M. KOBER, M. D., Washington, D. C.[1]]

Perhaps no subject just now is of greater interest to the profession and the public than the training of medical men as future medical officers of the Army. Few men will question that military surgery and sanitation should have a place in the medical-college curriculum. Those who are in doubt will simply have to recall our experience in past wars and consider the probabilities of the future.

In the Crimean war the French army lost 1 man out of 3 of the whole army, and of 95,613 lives lost only 10,240 were killed, about as many died of wounds, while the remainder, more than 75,000, died of disease.

The total deaths in the Union Army during our civil war numbered 259,496, or over 15 per cent of the entire number of enlistments. Of this number, 124,586, or nearly one-half, died from disease, while 134,910 were killed in battle or died from the effects of wounds. Indeed it is calculated that in that war the Union Army treated over 6,000,000 cases, including 151,384 cases of continued fever, mostly typhoid, 1,739,135 cases of diarrhea and dysentery, 76,318 cases of measles, 18,952 cases of smallpox, and 24,812 cases of erysipelas.

"What an excess of pain and sorrow—what an ocean of tears and blood—are contained in these figures!"

Consider, if you please, that in addition to this terrible sacrifice of human life a generous nation expends $140,000,000 a year for the support of invalids of this war.

In spite of this array of preventable diseases, Professor Virchow, the highest medical authority in Germany, in reviewing the medical history of that war, said: "That the French in the Crimea learned from their experience little or nothing, and the Americans during the civil war so much, was not due to the magnitude of the need which the Americans had to suffer—for this was not greater than that experienced by the French in the Crimea—but rather to the critical and truly scientific spirit, the open mind, the sound and practical common sense which in America gradually permeated all departments of army organization, and which, under the wonderful cooperation of an entire nation, reached the highest point of humane effort ever attained in a great war."

From this time dates a new era in military medicine, and the knowledge purchased at so vast an expense, has had a beneficial influence upon other armies and borne fruit in our recent brief but glorious war; for, notwithstanding the most unjust criticism of the press, the work of the Medical Department of the Army, in the face of adverse climatic conditions, shows a marked improvement over that performed heretofore.

We ought not to judge the efficiency of the Medical Corps by a few isolated cases of suffering and distress incident to the exigencies of war; but should estimate the work by the grand total accomplished.

[1] From address delivered at the decennial anniversary of the Medical and Surgical Society of the District of Columbia.

Digitized by Google

The War Department, on October 4, posted a bulletin showing the number of deaths from all causes between May 1 and September 30 to have been as follows:

Killed, 23 officers and 257 enlisted men; died of wounds, 4 officers and 61 enlisted men; died of disease, 80 officers and 2,485 enlisted men, being an aggregate of 2,910 out of a total force of 274,777 officers and enlisted men, or a percentage of 1.59.

In estimating these percentages due allowances should, of course, be made for the comparative short duration of the recent war; and reliable conclusions can only be drawn by comparing the statistics of the first six months of our civil war with the corresponding period of the Spanish-American war. This, at present, is not practicable; but we do know that among 20,000 troops stationed at Camp Alger, Va., at the close of the second month of its recent occupancy, there were only 39 cases of typhoid fever, while at the corresponding period of 1861 the same number of troops near Washington furnished 166 cases.

When it is remembered that the largest percentage of sickness and mortality generally occurs during the first few months of a war—because large numbers of unseasoned troops are aggregated in military camps, and their very ages, from 18 to 30, together with a radical change in the mode of living, render them especially liable to typhoid fever infection—we may confidently expect that future comparisons with troops exposed to similar influences will show that the Medical Corps has kept pace with the progress of preventive medicine. Indeed, the medical statistics so far at hand clearly demonstrate its success in diminishing the horrors of war.

All this is the more creditable when we consider that the United States, with a small standing army and a small corps of trained medical officers, was suddenly involved in war, absolutely unprepared for the struggle, except that we had men gifted with good common sense, powers of observation and application, and a generous nation to provide the necessary means.

If the American medical staff accomplished so much without special training, how much more might have been achieved had the volunteer medical officers enjoyed instruction in military surgery and sanitation such as is given in the Army Medical School in this city, established by Surgeon-General Sternberg five years ago, as one of his first official acts.

Some one will say, "Necessity is the mother of invention. Experience is the best teacher. We did it before, and we can do again." Yes; but who can deny that had the medical officers of our wars known more of army diseases, their causes and prevention; had they appreciated the importance of military sanitation and the routine of their official duties, the results, creditable as they are, would have been still more satisfactory?

It is true the volunteer medical officer is perfectly familiar with surgery and medicine. Their practice from civil life does not differ save in the circumstances which surround them; but it is not so with his official and sanitary duties, and, as well expressed by a competent critic, "the difficulties encountered by the Army Medical Department were due to the impossibility of having in so short a time an experienced and well-disciplined medical force sufficiently strong in numbers to control the sanitary situation in an aggregation of a quarter of a million of men hurriedly thrown together in military camps."

Our Army certainly needs reorganization. Instead, however, of attacking a faulty system, for which the people or their representatives in Congress are largely to blame, the present chief of the Army Medical Department has been made a target for most unjust criticism. He appears to be held responsible for the care of every individual sick, for the sanitary condition of camps, for the misdeeds of his subordinates, for the failure of the Quartermaster's Department to land medical supplies, etc.; but this earnest, hard-working officer needs no vindication at my hands. History will do this when the facts are known, and the facts already developed reflect the highest credit upon his administration.

His circular of April 25, four days after the declaration of war, in which he urged on medical and commanding officers the importance of sanitary precautions for the prevention of disease in camps, has alone saved thousands of lives, as judged by the experience of former wars.

The question naturally arises, What can be done to secure an experienced sanitary corps of medical officers in the event of future wars? And the answer must be, we should either have a large standing army, fully trained and equipped for any and every emergency, or provide this special training in some other way.

One of our Presidents has said that, "under our system of government we will never have a large standing army, and our strength and safety are in a general dissemination of military knowledge among the people." This advice has been acted upon by numerous educational institutions teaching the coming men of America the elements of the art of war; but so far scarcely any of our medical colleges have deemed it necessary to teach their students the duties of medical officers. It is true the National Guard affords an opportunity for this training,

Digitized by Google

but even if all the medical officers of the State troops were on the high plane of efficiency that a few have attained, they could not fill the demand of those needed in a war of any proportion, requiring at least one medical officer for every 200 fighting men; and we should, therefore, look to our medical schools for a systematic diffusion of military sanitation.

Our medical colleges have very generally introduced instruction in personal and public hygiene, and there should be no difficulty in convincing them that it is a patriotic duty to establish a course on military surgery and sanitation.

As a matter of fact, one of the medical schools in this city established such a course in 1894, and it is believed that interest in the general course on hygiene has been promoted thereby.

It is no more difficult to interest the average student in this than in any of the subjects taught, provided the course is made obligatory and he is required to pass a satisfactory examination. This is sufficient to insure prompt attendance and attention; but apart from this we can appeal to the patriotism and ambition of the student.

It can not be expected that every young physician will or can choose the Army or other public service for his professional career; but there will be ample opportunities for the application of the knowledge thus acquired as sanitary officers in connection with health boards, as physicians and surgeons in charge of hospitals, reform schools, jails, prisons, and asylums, as ship and police surgeons, pension examiners, surgeons in the employ of railroad and mining companies, or of surveying expeditions, as medical examiners of insurance companies, and in the home of almost every patient.

When a student is told, for example, that the general rules to be observed in the examination of recruits will enable him to select able-bodied men for the police force and life insurance policies, and that the question of food, its preparation and the care of cooking utensils are of practical importance in the management of his patients, his interest in these subjects will be stimulated. Indeed, he will soon learn that the aphorisms of the army cook's creed are not less applicable to the civilian. Take, for instance, the following, the truth of which the soldier learned from bitter experience:

"Cleanliness is next to godliness both in persons and kettles. It is less dangerous to work your elbows than your comrade's bowels. Remember, that beans badly boiled kill more than bullets, and too much grease is more fatal than powder."

The average student of to-day will not forget the import of these aphorisms, and takes pride in being able to explain that dirty and greasy pots furnish food for certain saprophytic germs and consequent toxic products, which in turn produce cholera morbus and other gastro-enteric disorders; that an excess of grease and improperly cooked beans render the digestive tract vulnerable to the germs of typhoid fever and dysentery, and are, to a great extent, responsible for the many cases of simple and chronic diarrhea. He will also appreciate the necessity of a prompt and correct diagnosis and proper disinfection, in order to limit the spread of typhoid fever and other infectious diseases, and will scarcely forget that good wholesome food and personal hygiene secure pure blood, which offers the best possible defense against microbial invaders.

The lectures on military hygiene and surgery may very properly be devoted to the following subjects:

1. The national necessity of instruction in military surgery and sanitation.
2. The duties of medical officers, professional and administrative.
3. The duties of medical officers as sanitary officers.
4. The importance of examination of recruits and discharges on surgeons' certificates.
5. The training of the hospital corps.
6. The hygiene of troops in permanent posts.
7. The hygiene of troops upon the march and in camps.
8. Preparation and supplies for field service and active hostilities.
9. Modern firearms, explosives, and projectiles.
10. The effects of modern firearms in battle and probable amount of surgical work in a given number of wounded.
11. General consideration of gunshot, sabre, and bayonet wounds.
12. Dressing stations, field, base, and general hospital.
13. Army diseases, their causes and prevention.

In order to supplement theoretical instruction by practical experience, legislation should be invoked to enable respectable medical colleges to recommend to the Surgeon-General a certain number of qualified students for admission to the Army Medical School. Upon completion of their course, those passing the most creditable examination might be chosen to fill vacancies in the regular corps, while the

Digitized by Google

remainder should be appointed additional assistant surgeons for a term of two years, at the expiration of which they should return to civil life, obligated to render service whenever the exigencies of war require it.

The advantage of this plan, apart from supplying the public service with superior talent, would be the creation of a strong reserve, whose special training would be invaluable, not only to State troops, but to the nation, in peace as well as in war.

In conclusion, let us not relax our efforts to elevate the standard of our beneficent profession. Progress has crowned our past. We will not retrograde. Let us, hand in hand, with heart and mind, join in promoting the welfare of American medicine until she has reached the proudest pinnacle in the world of learning, until she has become the fountainhead of all that is pure in scientific medicine.

ELECTIVE STUDIES IN MEDICINE.

[By Dr. H. P. BOWDITCH, of the Harvard Medical School.[1]]

During the last quarter of a century the improvement in medical education in this country has consisted chiefly in increasing the requirements for admission, in lengthening the course, and in extension of the laboratory method of instruction. Important as these improvements have been, it may fairly be asked whether they have kept pace with the requirements imposed upon teachers by the remarkable advance in every department of medicine during the last thirty years.

During this period we have seen the germ theory of disease established upon a firm basis and extended so as to throw light upon a large number of morbid processes with which it was formerly supposed to have no connection. Antiseptic methods have revolutionized the surgeon's art. The study of the internal secretion of glands has led to the development of a system of glandular therapeutics. The use of the antitoxin treatment has robbed one at least of the most dreaded diseases of more than half of its terror, while the use of instruments of precision has increased the accuracy of our diagnosis in nearly all the ills to which flesh is heir. * * *

To extend the course of instruction in the medical schools of this country beyond the present four-year limit does not, under the prevailing conditions of education in America, seem desirable, and the curriculum of most of our schools is already so crowded that no considerable amount of instruction can possibly be added. In what way, then, can we give to our medical students an adequate amount of information on all subjects embraced in the constantly widening domain of medical science and art? In other words, how shall instruction keep pace with knowledge?

In seeking an answer to this question it may be assumed that a medical school of the first rank should be an institution in which the most advanced instruction in all departments of medicine can be obtained, and on this assumption it is, of course, impossible to arrange a course of study that every student *must* follow in all its details, for in the time which may properly be devoted to a course of professional study it is quite impossible for even the most intelligent students to assimilate all the varied information which such a school may reasonably be expected to impart.

It seems, therefore, to be evident that in arranging a course of medical study a distinction must be made between those subjects which it is *essential* that *every* student should know and those subjects which it is *desirable* that *certain* students should know, that is, between those things of which no man who calls himself a physician can afford to be ignorant and those which are important for certain physicians but not for all; in other words, provision must be made both for required and for elective studies.

The introduction of the elective system into a professional school is not an altogether novel proposition. For several years a large part of the instruction in the fourth year of the Harvard Medical School has been given in elective courses in various specialties, such as ophthalmology, otology, etc. The extension of the elective system to the earlier years of the course would be attended by no difficulty as far as details of administration are concerned, and has, indeed, been advocated by President Eliot in a speech at the dinner of the Harvard Medical Alumni Association in 1895. * * *

Any one who is familiar with the existing methods of medical instruction is aware that in nearly every department many things are taught which are subsequently found to be of use to only a fraction of those receiving the instruction.

Thus, the surgical anatomy of hernia is taught to men who will subsequently devote themselves to dermatology; future obstetricians are required to master the details of physiological optics, and the microscopical anatomy of tumors forms a part of the instruction of men destined to a career as alienists. Now, no one can question the propriety of including instruction on all these subjects in the curriculum of a medical school, but it may be fairly questioned whether every student should be forced to take instruction in them all. It may, perhaps, be urged that no choice of studies can be made without determining to some extent the direction in which the work of a future practitioner is to be specialized, and that such specialization can not be properly and safely permitted until the student has completed his medical studies. To this it may be answered that, whatever may be the dangers of too early specialization, the dangers of crowding the medical course with instruction of which many students do not feel the need, and of thus encouraging perfunctory and superficial work, are certainly no less serious. Moreover, it will doubtless be found perfectly possible to establish such a relation between the required and the elective courses that the requirements in each department will be in no way lowered, while a certain freedom of choice is permitted with regard to the direction in which the work is pursued.

It would doubtless be found desirable in practice not to confine the possibility of taking elective courses to the year in which the required instruction is given; for a student may frequently in the latter part of his course become interested in a subject like mental diseases, for instance, and will then be glad of an opportunity to take special instruction on the physiology of cerebral localization. The elective courses should, therefore, be so arranged that they may be taken in any part of the medical curriculum. * * *

Under the existing conditions of medical education the introduction of the elective system in some form or other seems to be an essential condition to any further important advance. If it be said that under this system the medical degree will cease to have the definite meaning now attached to it, and that it will be impossible to tell from his diploma in what way a physician has been educated, it may be replied that, though the degrees of A. B., A. M., Ph. D., and S. D. are affected with exactly this same uncertainty of signification, their value seems in no way diminished thereby. As long as the M. D. degree stands for a definite amount of serious work on medical subjects, directed on lines above indicated, we may be reasonably sure that those who hold it will be safe custodians of the health of the community in which they practice.

If it be urged that the elective system in medical education will lead to the production of a class of physicians who, owing to the early specialization of their work, will be inclined to overrate the importance of their specialty and to see in every disease an opportunity for the display of their special skill, it may be pointed out that this result is apt to be due not so much to early as to imperfect instruction in the work of a specialist, and that, since the elective system tends to encourage thoroughness in special instruction, the evil may be expected to diminish rather than to increase.

COST OF MEDICAL EDUCATION IN GREAT BRITAIN.[1]

The educational number of the British Medical Journal, August 27, contains the following data, which may prove interesting for a comparison with the requirements in this country:

The fee paid to medical schools for the full curriculum—the composition fee—varies a good deal and ranges from a little under £100 to a little over £150. The difference, however, when spread over five years, is not very considerable, and we do not think that very much weight should be attached to this point in choosing a school. From £30 to £50 must be added for various necessary additional expenses—for extra classes, materials used in practical work, instruments, books, and subscriptions to clubs—so that it may be roughly estimated that the sum paid by the medical student for his education should not exceed about £200 and may be made, perhaps, about £50 less. The fees to be paid for degrees or diplomas vary very much, but they may be set down, perhaps, at about £50.

As has been observed, the cost of living varies very much in different places. It is, for instance, decidedly lower in Aberdeen or Edinburgh than it is in London; but we may, perhaps, assume that a fair average will be about £100 a year, provided that the student lives free of expense during the Easter and summer vacations. To this must be added a suitable allowance for clothing and traveling expenses.

[1] New York Medical Journal, September 17, 1898.

From this it will be seen that the estimated minimum, allowing £500 ($2,500) for five years' maintenance during the curriculum, and, say £20 ($100) a year for five years for incidentals—total $500, will enable him to get his diplomas for from $3,900 to $4,250. But, as the editor says:

On the whole, it should not be expected that a student should be able to pass through the prescribed curriculum and obtain the necessary degrees or diplomas for an expenditure of less than £1,000 ($5,000), and it must be recognized that this amount is very likely to be exceeded. In former times it was sometimes possible for the student to earn something during the last year or two of the curriculum, but this has now become extremely difficult, and the attempt ought not to be encouraged. The five years now prescribed is all too short a period within which to crowd the immense number of subjects with which the student is expected to become familiar.

THE METRIC SYSTEM OF WEIGHTS AND MEASURES.[1]

The committee on weights and measures of the American Pharmaceutical Association, at its meeting in Baltimore, 1898, reported as follows:

Your committee, however, are pleased to report substantial progress in the adoption and use of the metric system by the world at large. The most important advance in its recognition is the use of the metric system of weights and measures in the recently issued British Pharmacopœia; and although the old imperial system has also been given in this work, it is probable that the action taken is the stepping-stone to the exclusive adoption of the metric system in future editions of this authority. In addition to this a bill has passed both Houses of Parliament legalizing the system in Great Britain, and probably before this date has received royal assent. Russia has also made the adoption of the metric system a certainty after a stipulated date.

It is to be regretted that our own physicians do not more generally use the metric system in their everyday prescription writing. Our American physicians do not take up its use as rapidly as we would expect from members of a profession so progressive in science and in investigation.

This is no doubt largely due to the fact that medical students are still taught mainly in the old system of weights and measures, and the difficulty they experience in adapting new terms and calculations to the dosage which they have been taught prevents their serious consideration of the subject.

We can hope for no rapid progress in the use of the metric system in medicine until our medical schools and colleges teach this system alone and medical authors at least give it the preference rather than stating the equivalent in metric terms. In view of this fact your chairman would suggest that a resolution be passed by this association to be presented to the American Medical Association at its next meeting, to be held at Columbus, Ohio, requesting the American Medical Association to use its influence in bringing about the exclusive use of the metric system of weights and measures by all colleges and schools of medicine recognized by them in the United States.

This would require only such men as are engaged in scientific instruction in teaching medicine to change their old established methods of dosage and calculations, and all students coming under their instruction would from their entrance in college know no other system of weights and measures.

In accordance with this suggestion, a resolution covering the proposition is herewith presented:

"Whereas the metric system of weights and measures is used exclusively in the United States Pharmacopœia, and is official in the pharmacopœias of nearly all other nations; and

"Whereas it has become the universal system of weights and measures in scientific calculations; be it

"*Resolved*, That the members of the American Pharmaceutical Association request the American Medical Association to use its influence with all colleges and schools of medicine recognized by them in the United States, to use exclusively the metric system of weights and measures in the instruction of students, beginning with the classes entering said colleges and schools in the college year of 1900."

H. M. Whelpley, M. D., St. Louis, Mo., spoke as follows:

During the past fifteen years I have paid considerable attention to the work of introducing the metric system among pharmacists and physicians. I find that the

[1] Proceedings of American Pharmaceutical Association, 1898, pages 89, 450.

Digitized by Google

doctors claim that a pharmacist can not fill their prescriptions if written in the metric system, while the druggists say that the physicians are unable to write prescriptions in the metric system.

I have made no attempt to canvass the subject of teaching the metric system in colleges of pharmacy, for I believe that every American institution teaching pharmacy insists upon the students becoming familiar with the metric system.

In order to learn the extent to which the metric system is taught in the colleges of medicine, I sent a copy of the following inquiries to each one of the 154 medical institutions in the United States recognized by the Illinois Board of Health:

1. Is the metric system taught in your college?
2. If so, are the students obliged to become familiar with it before graduation?
3. About how many, if any, of your teachers use the metric system in their regular practice?
4. Has your college ever taken any united action favoring the general use of the metric system in prescription writing?
5. Name of the college.

Unfortunately these queries were sent out during the college vacation, and this fact undoubtedly accounts for the small number of answers received. Up to date 67 colleges have answered. A summary of the responses is as follows:

Fifty-one out of the 67 colleges answering are teaching the metric system.

Forty-three of the 67 colleges answering state that students are obliged to become familiar with the metric system before graduation.

Four of the 67 colleges answering state that all of their teachers who are practicing physicians use the metric system.

No united action has been taken by the teachers of any medical college among the 67 answering to favor the general use of the metric system in prescription writing further than is done by teaching it to the students.

From this report I judge that the metric system is taught in nearly all of the medical colleges, but fear that the members of the faculty fail to use it in prescription writing, or impress upon the graduates that it is a practical and convenient as well as scientific system of weights and measures. Some colleges seem to teach it out of a sense of duty rather than from belief in its utility. I suggest that the members of the American Pharmaceutical Association living in the vicinity of medical colleges and acquainted with the teachers take pains to impress upon such physicians the importance of using as well as teaching the metric system.

Mr. RYAN said: In regard to the charge made by physicians that pharmacists are not equipped for the use of the metric system I want to say this: The secretary of the Erie County Pharmaceutical Association, including the city of Buffalo, sent out 150 postal cards to members asking if they were acquainted with the metric system, and how many of the last 100 prescriptions filled by them had been written in the metric system, and this was the result: Seventy-one cards were returned; 60 of the 71 had full sets of metric weights and measures; 7 had none; 2 had partial sets, and 2 did not reply to this portion of the question. The report on the last 100 prescriptions, 71 being returned, made 7,100 prescriptions, and of these 769, or a trifle over 10 per cent, were in the metric system. One druggist replied that his last 100 prescriptions had all been written in the metric system. An investigation took place, and he was found to be a Polish druggist, handling all his prescriptions from one Polish doctor, who wrote all his prescriptions in that system.

UNIVERSITY OF PENNSYLVANIA—THE NEW DENTAL HALL.[1]

Realizing the need for more ample facilities for properly carrying on its educational work, the dental faculty had for several years urged the necessity for a more commodious building devoted exclusively to the requirements of dental teaching, where the most approved methods of instruction could be pursued. The matter having received the favorable consideration of the trustees, a committee was appointed to consider and report upon plans for a new building. A subcommittee was instructed to make a study of a number of the representative dental schools of this country, with a view to learning the best that had been done in the construction of dental-college buildings, their equipment, and the pedagogical methods pursued. The report of this committee embodied the results of their study of 10 representative dental colleges, and the valuable suggestions thus acquired formed the basis of the plans drawn for the new Dental Hall.

The arrangement of the interior is such that facilities are provided for the thorough education of the student in every important detail of his professional work. The clinical operating room occupies one entire floor of the main building, giving a floor space 180 by 50 feet, furnished with 100 latest pattern Wilkerson operating chairs, each provided with a fountain cuspidor, with running water attached, and attachment for the Fisk saliva ejector. Both chairs and cuspidors were specially designed and manufactured for this department. Each chair is provided with a bracket arm and table for holding instruments, besides a separate table for the instrument case. Electric service is provided for each chair. A complete locker system in connection with the operative clinic furnishes means for the safe storage of instruments when not in use. In fitting up the operating room the aim has been to make the appointments as nearly as possible like those of a first-class private office, so that from the beginning of his course the student is familiarized with the conditions he will meet in practice.

One large general laboratory for prosthetic work is provided, and separate departments for crown and bridge work, orthodontia technics, prosthetic technics, operative technics, metallurgical work, vulcanizing and modeling, special clinic rooms, and laboratories. Ample arrangements are provided for the convenience and comfort of the students in the care of instruments, tools, etc. There are also hat and coat rooms, lavatories, etc., a bicycle room, laundry, store rooms, and living apartments of the janitor, and an assembly room for the exclusive use and recreation of the students when not on duty. The laboratories are fitted with the most approved appliances for work and instruction in the several departments of dentistry. Compressed air is supplied to the laboratory tables for melting and soldering operations, as well as for metallurgical work. The laboratory lathes are driven by an electric motor, and no feature which could add to the facilities for thorough and accurate work has been omitted.

The lecture amphitheater will comfortably seat 350. It joins the main building by a corridor, and in relation with it are arranged the dental museum and library.

VETERINARY STUDY IN MASSACHUSETTS.[1]

The last legislature of Massachusetts appropriated $25,000 for the erection and equipment of a veterinary laboratory and stable hospital in connection with the State Agricultural College. Provision was also made for an annual appropriation of $1,000 as a maintenance fund for the veterinary laboratory, to provide means of instruction, and to carry on investigations of the diseases of domestic animals. This allowance is to be made from January 1, 1899. Two new buildings are to be erected. One will be used as a hospital, and the other will contain the class rooms for students in veterinary science, the private office of the professor in the department, his cabinet of specimens, and other rooms connected with the work. The cabinet will open into the laboratory, so that the specimens can be used for either class room or laboratory work. The Agricultural College, although giving a thorough preliminary course in veterinary medicine, does not grant any degree. Those who wish for this must take the regular courses in professional veterinary schools.

NOTE.—In Chapter XXV, entitled "The Learned Professions and Social Control," by Mr. Addis, which appeared in the Commissioner's Report for 1896-97, on page 1202, under the head of Pennsylvania and in the second column, the words "Others must stand an examination" should be "All [except licentiates of New Jersey] must stand an examination before board." The error of the text is due to the writer of the chapter and not to Dr. Latta, secretary of the Medical Council of Pennsylvania, whose answer is reproduced correctly on page 1234 under Pennsylvania. In reply to the note explaining the cause of the error Dr. Latta has further favored this Bureau with the following information: "The latter clause of the thirteenth section of the act of 1893 provides for the acceptance of certificates from other States in lieu of examination, but the council has held that it has the authority to determine what certificates shall be recognized, and at present it recognizes the certificate from New Jersey only."

d This sum (estimated) has been given for hospital improvement and erection of clinical amphitheater in John Sealy Hospital, to be called "Rebecca Sealy Amphitheater," contributed by children of John and Rebecca Sealy (deceased). "University Hall" (dormitory building) given by G. W. Breckenridge, at a cost of $40,000 (including equipment), is completed and was on May 15, 1897, formally transferred to the university. *e* Four years hereafter.

CHAPTER XLIV.

AGRICULTURAL AND MECHANICAL COLLEGES.[1]

NEW BUILDINGS AND CHANGES IN THE COURSE OR IN THE METHODS OF INSTRUCTION (FROM PRESIDENTS' REPORTS).

President William Leroy Broun, Alabama Agricultural and Mechanical College.—Among the 280 students enrolled were 61 from other States. No change in the method of instruction. Much attention is given to laboratory instruction, the college being provided with 10 laboratories in the different scientific departments. For the study of electricity there is the usual experimental lecture course and a full course in electrical engineering, the laboratory of which contains 15 different dynamos. Compressed air is used in the mechanical engineering department.

President John L. Buchanan, Arkansas Industrial University.—No material changes have been made, but there have been some important additions to the course. The chair of economics and sociology was filled by the election of a competent professor and a four years' course of instruction in those subjects provided. The art department was duly organized, and a convenient and commodious studio, with a partial outfit, provided for it. Fuller and more definitely outlined courses in agriculture and horticulture have been introduced. The work of the session suffered somewhat from the war excitement. A number of students volunteered, some of whom, as well as a number of former students, received appointments as officers, owing principally to their military training received here.

A handsome plant or green house, with a room adjoining which serves as a botanical laboratory, has been erected, at a cost of about $2,500, and furnished with a largely increased collection of plants. Two new office rooms have been added to the experiment station building, costing in the neighborhood of $1,000, and a seed and tool house erected on the farm, costing about $200. The plant house and seed and tool house are of wood on a stone foundation; the office rooms are of wood veneered with brick. A sewerage system, with lavatories, toilet rooms, and bath house has been constructed, at a cost of $2,000. The university shops have received an addition to their equipment in the way of machinery and tools, costing between $5,000 and $6,000. The department of civil engineering has been given more commodious quarters and valuable additions have been made to its outfit. The apparatus of the electrical laboratory has been increased by purchases amounting to nearly $1,000—an X-ray outfit, two Kelvin voltmeters, an AC-DC polyphase motor generator, etc. Thus the university is better equipped than ever before for both theoretical and practical instruction. The buildings are in excellent condition and the grounds have been improved.

President Martin Kellogg, University of California.—A college of commerce has been established and will begin its courses at once. Prof. George Davidson, formerly of the Coast Survey, has been appointed to the chair of geography.

What are called the "affiliated college buildings" [professional schools] in San Francisco, built by a State appropriation, have been completed at a cost of $175,672.

[1] Compiled by Mr. Wellford Addis, specialist for obtaining and collating information regarding colleges of agriculture and the mechanic arts.

Digitized by Google

At Berkeley several buildings have been erected, at a cost of $55,318, namely: An agricultural hall (to replace the one burned), which has a complete equipment for the agricultural college; a two-story and basement building for the botanical department, with laboratories; a hall for philosophy, including experimental psychology; a large building for zoology (freshman), physics, mechanical drawing, and industrial art. A site for the Wilmerding Trade School has been given by citizens of San Francisco, and valuable additions, chiefly gifts, have been made to the library. The electrical department is fully equipped in the hall of mechanics.

President Alston Ellis, Colorado State Agricultural College.—The college year of thirty-nine weeks, divided into three terms of thirteen weeks each, closed with the exercises of commencement day, Thursday, June 2, 1898. The year was characterized by steady progress in all the departments of instruction. There was nothing connected with the administration of the college that was particularly marked or especially distinguished from that of the year preceding. Experience has shown that the strengthening of the course of study by the addition of another year's work was a step in the right direction. The standard of scholarship has been raised and the work of the institution has reached more to the dignity of what is known as collegiate instruction. It is not supposed that the total revenue received from the State for the support of the college within the next year will exceed $38,000. Fortunately, however, the receipts from the land income fund, those arising from the Congressional act of 1862, are gradually increasing. It is fair to estimate that the increase of receipts from the last-mentioned source will make up the loss of revenue received under the operations of the mill-tax law. The commercial department that was established two years ago now enrolls about 80 students. Its course covers a period of two years and presents a great deal of scholastic work in addition to the peculiar work for which commercial colleges usually make more or less adequate provisions.

The college buildings and grounds have been kept in a good state of repair, and many improvements of a minor character have been made in the interior of the various buildings on the college grounds. At this writing the new chemical laboratory is completed and in use. The total cost of the building, including heating, lighting, and plumbing appliances, is $27,387.76. Of this amount a little over $6,000 had been paid prior to June 30, 1897. Probably the architect's fee and cost of supervision, amounting to about $1,300, ought to be added to the cost of the building as above reported.

President G. W. Flint, Storrs Agricultural College.—The course is now four years in duration, with full lines in English, agriculture, horticulture, mathematics, veterinary science, physiology, mechanical drawing, and work in wood and iron. No new buildings added, though several are needed. Two cottages for dwellings were finished December 1, 1898.

President George A. Harter, Delaware College.—The principle of freedom in the election of studies without destroying educational coherency has been introduced into the junior and senior years of the several courses. The call for volunteers by the President caused 7 seniors, 7 juniors, 3 sophomores, and 2 freshmen to respond, all being made commissioned or noncommissioned officers in the First Delaware Regiment; but as the work of the senior class was practically finished, the members of the senior class who entered the military service were graduated with the rest of the class.

President W. F. Yocum, Florida Agricultural College.—The department of agriculture, which for some years had been combined with that of chemistry, has become a separate department in charge of a competent professor. The mechanical course of study has been much strengthened and new apparatus purchased. A complete course in electrical engineering will be inaugurated at the beginning of the next year. No important additions have been made to the grounds or buildings.

President H. C. White, Georgia State College of Agriculture and the Mechanic Arts.—The condition of the college is entirely satisfactory, and its progress during the past year all that could be expected or desired. A thorough examination of the college

Digitized by Google

and its affairs was made by two distinct committees of the general assembly of the State and both of these committees unanimously testified to the efficiency of the work of the college and the scrupulous integrity and carefulness of its financial management. A difference of opinion was developed as to the expediency of continuing the connection of the college with the State University, but all measures presented to the general assembly looking to a disturbance of present relations were defeated by large majorities. No changes of importance have been made in the courses or the methods of instruction. Existing courses have been strengthened and somewhat extended.

One new building (the gift of the State) has been completed, of three stories and basement, constructed of brick and granite, at a cost of, approximately, $23,000. With the exception of one lecture room and two administrative offices, the basement and two lower floors are occupied by the lecture rooms, laboratories, museums, stock rooms, etc., of the school of chemistry. The third floor has been fitted up with lecture rooms, laboratories, etc., for the school of biology. The accommodations and equipment for these two schools is now admirable and first class in every particular. The portion of a building formerly occupied by the school of chemistry has been refitted (at a cost of, approximately, $2,000) for the department of electrical engineering, and additional engines, dynamos, and other apparatus provided at an approximate cost of $4,000. This department is now fairly well provided with space and apparatus for very satisfactory teaching, both didactic and experimental, of electricity and its applications in "the industries of life." The study of compressed air as a secondary motor power is not yet specialized. A new and excellent farm of 120 acres (100 under cultivation) has been purchased (from funds of the university) for the school of agriculture and is now in process of equipment.

President F. B. Gault, University of Idaho.—There has been erected during the year a greenhouse for a horticultural department in which instruction is to be given in floriculture and greenhouse management. There is a building, a story and a half, in front of greenhouse for class room and other horticultural work.

President Andrew S. Draper, University of Illinois.—The university has been unprecedently prosperous during the last year. A school of law was established upon a substantial footing, and the college of physicians and surgeons of Chicago, with over 400 students, was absorbed and became the school of medicine of the university. The school of library science, formerly at Armour Institute, Chicago, was removed to the university.

President J. H. Smart, Purdue University.—Our course in railway engineering and management has been greatly enlarged. A noteworthy increase in our attendance has occurred, the number of students now being 750 with 57 post-graduate students. We have printed 5 regular college bulletins, 14 newspaper bulletins, and 2 food bulletins.

A one-story brick building, 50 by 100 feet, with corridor 20 by 40 feet, to be used for our railway testing department, has been built, and a greenhouse for the horticultural department, the last containing 3 rooms, one for a work room, the other two affording different degrees of temperature. For the extensive course in electrical engineering, the building and equipment of which is valued at $55,000, a one-story brick addition has been added 63 by 26 feet.

President Beardshear, Iowa State Agricultural College.—An additional year of study has been added to all our courses, excepting the agricultural and veterinary, which have been strengthened. Our work in domestic science has been enlarged and another teacher added to the department. Our fiscal year has been changed to close June 30, and our commencement will be in June instead of in November.

A new carpenter shop, 120 feet in length by 37 in breadth and 30 in height, made of brick and covered with slate, costing about $5,000, was erected and completed in July, 1898. A campanile was finished late last fall, at a cost of about $6,000, for the reception of memorial chimes presented by Prof. E.W. Stanton in memory of his wife, who was one of the first members of the faculty of the college.

Digitized by Google

President Thomas E. Will, Kansas State Agricultural College.—Extensive changes in the course of study have been made during the two years ending July 1, 1898. The work was begun at the close of the fiscal year ending July 1, 1897, and is still in progress. The principal object of the changes was and is to emphasize the work in agriculture and mechanic arts, and also to give more prominence to studies conducive to civic intelligence and good citizenship. Special four years' courses in agriculture, household economics, architecture, and a short dairy course have been added. A civil engineering course has been prepared, and will doubtless be adopted by the board of regents at their meeting in January, 1899.

A building costing $16,000, for the use of the department of domestic science, has been erected. It was occupied at the beginning of the winter term, 1898, and will be dedicated January 6, 1899. This building accommodates the two departments of sewing and household economics, including cooking, and also contains a large students' dining hall and a kitchen, thus enabling board to be furnished to students at cost—that is to say, at $1.75 a week.

Electricity is studied in elementary physics during the first year. We have no laboratory. Electricity as an element in nature is studied under the head of meteorology and protection from lightning.

President James K. Patterson, Agricultural and Mechanical College of Kentucky.—The course of mechanical engineering was modified, as shown in the schedules [a comparison of the two schedules, old and new, shows a very decided change in respect to electrical engineering, that study gaining additional attention, it seems, by the use of the morning hours of Saturday during the junior and senior years]. The study of electricity as a secondary motive power forms a part of the course of study in the department of mechanical and electrical engineering. The study of compressed air as a secondary motive power is not considered, except as transmission of power by compressed air forms a part of the subject of thermodynamics.

A new building devoted to natural science was completed and dedicated in January, 1898. The building is constructed of pressed brick, with oolitic limestone trimmings, and slate roof. The building is about 97 feet square, and is three stories high, not including the basement, which extends under the whole structure. The building is heated by steam and lighted by electricity, and cost, with new furniture, about $22,000. In this hall are facilities for instruction in geology, zoology, botany, and allied subjects. On the third floor the State geological collection has been placed.

President Thomas D. Boyd, Louisiana State University and Agricultural and Mechanical College.—The buildings and grounds occupied by the university belong to the General Government and were formerly used for the purposes of a garrison. Hence the buildings are not well adapted to college purposes and were, when the university took charge of them, in bad condition. As the appropriation of $20,000 by the State legislature of 1896 depends upon the sale of certain State property for the amount named, the same is not yet available, and, therefore, the proposed central building has not yet been built.

President A. W. Harris, The University of Maine.—There are no important changes in courses or methods of instruction. One new building has been erected upon the university grounds by the Q. T. V. Society to be used as a club-house, furnishing a home for about 25 students. The facilities for instruction in electrical engineering are, with slight additions, as before. The apparatus of the department of physics for instruction in electricity is already large, and is constantly being increased. It will be noted that the number of students in electrical engineering exceeds that in any other line.

President R. W. Silvester, Maryland Agricultural College.—No changes in course or methods of instruction. A building of brick has been constructed, at a cost of $10,000, to be used as a science hall, thus supplying laboratory facilities, the want of which has long been felt. Through the departments of the State horticulturist and farmers' institutes much good is being accomplished and the work of a university extension character is having its effect with us.

Digitized by Google

President Henry H. Goodell, Massachusetts Agricultural College.—The State has this year appropriated $25,000 to erect and equip for class instruction and original research a two-story veterinary laboratory of brick, in connection with a hospital stable, likewise of brick, where diseased animals can be observed and treated. It has also erected and equipped, at a cost of $2,000, a small plant to be used exclusively in solving dairy problems.

President J. M. Crafts, Massachusetts Institute of Technology.—A new building is now under construction with a total floor space of 48,000 square feet. It will receive the departments of architecture, biology, and geology, will furnish additional space to the departments of mechanical engineering, chemistry, and will indirectly better the situation for all the other departments needing more space.

President J. L. Snyder, Michigan Agricultural College.—While no important buildings have been added to the college during the past year, there have been a number of minor additions made at an outlay of about $9,000, which adds much to the equipment and conveniences of the college. An electric-lighting system has been installed at a cost of $5,000. This outlay was for dynamos and the wiring of buildings. The dynamo is run with water power by an outside party under a five-year contract. The enrollment has reached 470, the highest figure in the history of the college. All students are required to take industrial work in one of the three courses of study offered. In fact, the work of the college is confined to courses of study, in which scientific and technical instruction in agriculture, mechanic arts, and domestic economy play the leading part. Six thousand dollars were expended in repairing buildings.

President Cyrus Northrop, University of Minnesota.—The instruction in the lines of agriculture and mechanic arts in the university has been somewhat broadened during the last year, more attention having been given to forestry and general agriculture and to electrical engineering and to railroad engineering. Indeed, there has been improvement along all the lines of study. The work in both colleges of agriculture and mechanic arts has been most satisfactory. Four hundred and seventy students have been connected with the agricultural department during the year, 129 with that of mechanic arts, and 54 with that of mines. The third topic of your inquiry is answered by Professor Shepardson to the following effect:

"THE UNIVERSITY OF MINNESOTA,
"*Minneapolis, August 26, 1898.*

"Replying to the inquiry from the Department of Education regarding instruction in the use of electricity and compressed air as secondary motive powers, I would say that our four years' course in electrical engineering is largely devoted to preparation for and study of electricity as a motive power. If the question refers specifically to the use of electric motors and transmission, such as would compete with compressed air, it is difficult to differentiate. The course 'Electrical generators' of four recitations and lectures per week through the third term of junior year has largely to do with motors. The four-hour course in 'Alternating currents' in first-term senior, the four-hour course in 'Electrical transmission' in second-term senior, and the two-hour course in third-term senior on 'Central stations,' all bear upon electric power. The first three of these terms are accompanied by six to ten hours per week upon experimental work in the laboratory. The 'Thesis' in the third term allows students to work ten or more hours per week upon such subjects if so desired. The 'Designs and specifications' of third-term senior may also be directed that way.

"In the study of compressed air the seniors in mechanical engineering have a two-hour course of lectures and recitations in the third-term senior. The mechanical laboratory has some equipment along that line. There are several plants in the Twin Cities which use compressed air to some extent. These, with the numerous and extensive electric plants, are examined by the students from year to year."

President Stephen D. Lee, Mississippi Agricultural and Mechanical College.—The session ending June 28 has had several interruptions. The yellow-fever scare in the

Digitized by Google

summer and fall of 1897 prevented the college from opening in September, and we did not open till November 15—two months late. The studies and duties of nine months were put into seven and a half months. The war with Spain in the spring of 1898 unsettled the student body. The senior class of 15 members, with two exceptions, volunteered and enlisted in the regiments from Mississippi. The class was graduated six weeks before the regular time. About 70 students left the college from the other classes, most of them enlisting for the war. The United States Army officer, Capt. H. H. Ludlow, Sixth Artillery, was ordered to his regiment and the two rifle cannon were drawn in by the Ordnance Department. A large per cent of the officers in the Mississippi regiments were graduates of the college, and in almost every company former students were found holding commissioned and noncommissioned positions.

The academic instruction has been fully up to that of former years. Electrical apparatus for laboratory instruction and for lighting buildings and grounds has been purchased and is now being received, as also a larger air compressor for increasing supply of water for use on the campus. A new building has been erected for a woodshop to make room for the electrical plant in the larger shop building. The grounds and the farm, station, and horticultural departments are in perfect and improved condition, and the shops are fairly well equipped. The complete electric plant will be in operation at beginning of the next session in September. All told, the year has been a most successful and progressive one, notwithstanding the abnormal interruptions.

Director George E. Ladd, School of Mines and Metallurgy, Missouri.—The old academic course has been remodeled and made into a four-year course in general science, the work in which is largely elective, and during the last two years is wholly so. A wooden structure has been built at a cost of $350 to supply, temporarily, quarters for the woodworking shop and dynamo laboratory. We have a compressed-air drill used by students experimentally; also temporarily a good air compressor and mining pump (the invention of one of our professors) run by compressed air. Lecture on this subject is given by our professor of engineering. We offer a number of courses, lectures, and much laboratory work in electricity.

President James Reid, Montana Agricultural College.—The changes have been as follows: The domestic science course has been changed from a two-year to a four-year course. Upon the completion of the course the degree of bachelor of science is conferred. The course in agriculture also covers four years, and upon its completion the degree of bachelor of scientific agriculture is conferred. The veterinary has been changed and remodeled for an engineering laboratory, costing about $1,200. The work in this laboratory will be chiefly in electrical lines.

Chancellor George E. MacLean, the University of Nebraska.—During the past year the faculty made a study of the curricula of leading institutions in this country and Europe. They further studied the registration of students in the college during the past five years to see what had been the demands made by these students. As a result of their studies they revised the groups of studies in the university, recognizing first, the demand for general groups; secondly, for special groups. It was clear that a further evolution of the group system, recognizing cognate studies, correlation of studies, and sequences, would be preferable to the abandonment of groups. It is believed that the university has not only met local demands, but given an example of original and progressive evolution of a curriculum. The present scheme is as follows:

A. General scientific group.
C. Special groups:
1. Agriculture and chemistry.
2. Botany and agriculture.
3. Botany and zoology.
4. Chemistry and physics.
5. Horticulture and botany.
6. Mathematics and physics.
7. Zoology and philosophy.

B. General agricultural group.
D. Technical groups:
I. Technical agriculture.
II. Civil engineering.
III. Municipal engineering.
IV. Electrical engineering.
V. Steam engineering.
VI. Mechanical engineering.

Digitized by Google

Early in the spring ground was broken for the erection of the wing of a new building, to be known as the college of mechanic arts. Through the liberality of the last legislature, $30,000 was appropriated for the erection of the first wing of this new building. The dimensions of the wing are 65 by 120 feet. The style is of the Romanesque order of architecture. There are lecture rooms for general use, besides the mechanic-art shop, photometry room, civil engineering, testing laboratory, senior laboratory, battery room, standardizing room, electro-metallurgical laboratory, museum, library, mechanics' arts office, civil engineering office, electrical engineering office, engineering room, and apparatus room. In the autumn of 1897 the enlarged dairy building was completed and opened. In addition to the accommodations for the farm and dairy school it has specifically for the experiment station a botanical and horticultural laboratory and the laboratory for the study of soil physics, while a new wing to the barn gives relief to the former overcrowding and affords an opportunity for experiments in feeding. The didactic and experimental provisions for the study of electricity have for a series of years been excellent, and there has been added certain apparatus for the use of students in developing their theses.

President J. E. Stubbs, Nevada State University.—(1) Courses of instruction. The organization of the university comprises the following schools of instruction and training: (*a*) The school of liberal arts; (*b*) the school of mines; (*c*) the school of agriculture; (*d*) the school of mechanics; (*e*) the school of civil engineering; (*f*) the State normal school. The school of civil engineering was opened last year. The school of mines naturally maintains a leading position in the interest of the people of this State. The school of agriculture will receive more attention in the next five years than hitherto, for the reason that there seems to be a growth of interest in the subject of agriculture in this State. Quite a desirable change has been made in the school of liberal arts. At the beginning of the junior year students, with the approval of the faculty, may choose to pursue a special line of study, consisting of one major subject and two minor subjects, the minor subjects to give breadth and depth to the subject taken as a major. An effort has been made to improve the quality and general character of the work in the military department. Also, an advance has been made in the requirements of the State normal school, a department of the university but not of the Agricultural and Mechanical College. The faculty have given careful consideration to secure the very best methods of instruction through the proper combination of class room, laboratory, and library methods.

(2) The new mechanical building was equipped with new machinery apportioned to three departments: First, the woodworking shop; second, the machine shop; and third, the blacksmith shop. The equipments cover machinery and tools of the best kind adapted to the needs of this department. For the completion of this building and for the equipment the State spent the last year $7,073.09.

(3) In connection with the mechanical building the university has established a small electrical laboratory, consisting of dynamo and other electrical appliances, for the purpose of giving practical instruction in the construction and use of electrical machinery and apparatus to students in all the science schools. It is not intended, for the present at least, to establish a department of electrical engineering.

President Charles S. Murkland, the New Hampshire College of Agriculture and the Mechanic Arts.—The chief change in the courses of the institution has been an elevation of the standard, amounting to nearly one complete year's work. The requirements for admission have been raised, so that students who enter must have had the equivalent of a good high-school education. Courses have been readjusted with special reference to developing the pedagogical sequence of the agricultural courses, in the attempt to make them equal in intellectual quality with the engineering courses. No important addition has been made to the plant. No special provision has been made for the study of compressed air as a motive power. The experimental researches in electricity have not developed any results significant enough for special mention. In general, the work of the year has been progressive,

Digitized by Google

and the changes have been determined by the necessity of adjusting the college more accurately to the requirements of the State.

President Austin Scott, Rutgers Scientific School, The New Jersey State College for the Benefit of Agriculture and the Mechanic Arts.—The course in agriculture has received an increased number of elections, and it has been possible to accommodate all of those students pursuing this course with board and lodging at the college farm, where they have daily practice in farm methods under the immediate supervision of the professor of agriculture. Among the more important acquisitions for better instruction in electricity are an electrical condenser, a 1½-horsepower motor, a thermo-generator, an ammeter, and X-ray supplies. Other purchases of apparatus and instruments include an aneroid barometer, a polar planimeter, beam compasses, graduated, a pantograph, an ellipsograph, a solar eye-piece, a collimating eye-piece, a direct vision prism, and a set of demonstration lenses. The library has received valuable additions of mathematical and chemical works.

To aid in promoting the purposes of the sanitary laws of New Jersey, the trustees of Rutgers College and Rutgers Scientific School have appointed a board of examiners to conduct examinations and grant certificates in municipal hygiene to officers of local boards of health, sanitary inspectors, factory inspectors, plumbing inspectors, and to those who may seek appointments to these positions without expense to this institution. The examinations are designed to test the fitness of persons who may be called upon to engage in the execution of the health laws, and the certificates issued will indicate the degree in which the holders are qualified to perform the duties relating to the promotion and the protection of the public health required by the laws of the State, and by the rules, regulations, and ordinances of local boards of health. The first of the triyearly examinations was held in June, 1898, at which time three persons approved themselves as qualified to act—one as an executive health officer, one as a sanitary inspector, and one as a plumbing inspector. This plan of instruction and examination in municipal hygiene is now introduced for the first time, it is believed, in any American institution.

In the general work of this department five half courses, of six lectures each, have been given, as follows: One half course each on India and Persia, the Eastern question, modern history, English literature, and six American poets. The total attendance at the 30 lectures was 794 persons and the average attendance 720. The total attendance at the class hours following each lecture was 410 persons and the average attendance 341. Ordinary half-course pass cards were awarded to 10 persons and honor pass cards to 4.

In special work 31 lectures were given, at which the total attendance was estimated at 2,000 persons and the average attendance at 1,700. The total attendance at the class hours was estimated at 1,290 persons and the average attendance at 1,075.

President C. T. Jordan, New Mexico College of Agriculture and Mechanic Arts.—The course of study and methods of instruction have not been materially changed. A building especially designed for laboratory work was completed during the year. The twenty-one rooms it contains are all taken up by work for the experiment station, and botanical, chemical, entomological, and physiological laboratories for college classes. The building cost about $12,500. A dormitory for girls was also completed at a cost of about $6,000. A dynamo and motor was added to the equipment of the mechanical department and is used for purposes of instruction solely.

President J. H. Worst, Agricultural College and Experiment Station, North Dakota.—No material changes in course of study or methods of instruction. The two years' short course provided for last year enrolled 12 students and the "farm school" 35 students. This farm school gives a course of instruction for three months during the winter.

President J. G. Schurman, Cornell University.—The year 1897-98 was the most prosperous, healthful, and in many ways the most memorable in the history of Cornell University. The attendance was larger than ever before, and, owing to the great

Digitized by Google

and progressive elevation in recent years in the standards of admission to nearly all courses, a striking improvement is markedly visible in the scholarship of this augmented student-body. The staff of instruction has also been larger than ever before. The great hydraulic laboratory has been completed, and a new department of instruction has been added to the college of civil engineering by the appointment of a professor of civil engineering in charge of the hydraulic laboratory. A graduate school of railway mechanical engineering has been added to the seven departments formerly constituting the Sibley College of Mechanical Engineering. The Sage Chapel has been doubled in seating capacity, and a semi-octagonal apse 16 by 31 feet has also been added as a memorial to Mr. Sage, $12,000 being devoted to interior decoration of this apse. Work has been begun on a new $55,000 chemical annex, which will double the space at the disposal of that department. The mansion of the late Hon. Henry W. Sage was conveyed by his sons, Dean and William H. Sage, to the university as a memorial to their father, and they also fitted and equipped it, and endowed it with $100,000. The State of New York established this year the New York State College of Forestry at Cornell, giving it as a laboratory, a demonstration area of 30,000 acres of Adirondack forest, and making an initial appropriation of $10,000 for maintenance. But most important of all has been the gift of Col. Oliver H. Payne, which has provided for the establishment and maintenance of a Cornell University Medical College in New York and in Ithaca. Upon this foundation a faculty of 11 professors, 54 clinical professors, instructors, etc., has been appointed, who will be assisted by the teaching force of the existing scientific departments of the university.

President James H. Canfield, Ohio State University.—We have no special changes to note for the year. The new buildings referred to in my last report have been completed and are now occupied for the purposes for which they were erected. The results following, more ample accommodation and better equipment are already apparent in the far better work they make possible. There has been a gain in our attendance of about 12¼ per cent. The greatest gain in anyone college is that in the college of agriculture and domestic science—nearly 50 per cent. The agricultural experiment station being a separate institution in this State, we have but few experiments to report. Those for the past year have been chiefly in the study of soils and in the study of the possibility of successful beet-sugar culture in this State. These will appear in the more formal report to be printed and forwarded later. It may be interesting to add, in view of the military provision in the law of 1862, that the large number of those who, as graduates and former students of this university, are now in the military service of their country and are showing unusual proficiency in the art of war is an ample proof of the wisdom of maintaining cadet service and military drill in the land-grant colleges.

President G. E. Morrow, Oklahoma Agricultural and Mechanical College.—No considerable changes in course or methods of instruction were made during the year. Increased attention was given to laboratory methods in instruction and more use made of the library. A somewhat higher standard of preparation was noticed in those entering, and a larger area of the Territory was represented in the school.

President J. H. Washburn, Rhode Island College of Agriculture and the Mechanic Arts.—The number of students has increased and our course of study has been materially raised, so that we are nearly two years in advance of our former standard. We have established a preparatory school, to take in students of agriculture who come from country schools and are unable to avail themselves of the advantages of high schools. We are conducting this school under protest and will discontinue it as soon as possible. In January we gave a short poultry-school course of four weeks, which proved to be a decided success. We are giving this year a course in road construction and engineering.

During the year the State legislature appropriated $10,000 for current expenses and $11,500 for agricultural buildings.

President Henry S. Hartzog, the Clemson Agricultural College.—A course in textile training has been added, and a building erected for same at a cost of $15,000. A building has also been erected for horticultural department at a cost of $1,000. The building for instruction in electricity is well equipped, and graduates have had no trouble in securing good positions.

President J. W. Heston, South Dakota Agricultural College.—Although the army officer detailed to this college was recalled to service in the field, we have maintained a military organization and carried on our military exercises with staff officers, who have done excellent work under the circumstances. The department of music was reorganized at the beginning of the year, and a new line of work in the value of architectural engineering and agricultural engineering was introduced. We attempted to offer instruction in German and Latin during the year as optional and elective studies and to furnish guidance for the study by assigning work to professors already burdened with other duties. The experience of the year indicated that we should do more than this, so the board elected a professor of modern languages. The board organized a preparatory department and appointed a teacher of Latin. In order to more systematically carry on the work of farmers' institutes that work was assigned to the State engineer of irrigation. It is our intention to pursue a more vigorous campaign of college extension next year and to endeavor to organize farmers' clubs for home study and scientific agricultural research. Another change is the revision of the entire curriculum, toward which we have been working for two years. We now offer all our work in short courses and run our college six days of the week all the year round. The number of studies pursued at anyone time is materially reduced. The different departments offer advanced

Digitized by Google

work not heretofore possible. Modern languages and Latin are given a prominent place, and at least one of them must be studied two years by all candidates for a bachelor's degree. Our short courses have been strengthened by the introduction of more subjects which bear directly on farm operations and processes, and also which show how scientific knowledge and technical skill may be applied in farm life and all home activities.

A new building has been erected, to be used for a mechanical laboratory. This is a two-story brick, 90 by 40. The first floor contains office, class room, machine and dynamo room. The second floor is fitted up for a drawing room and carpentry shop. The cost of the building is $5,000. A building has been remodeled for instruction in physics, industrial art, and domestic science; still another for agricultural experiment work. It contains laboratories for soil physics, chemistry, and animal and plant biological work. An electric-light plant has been added.

President Charles W. Dabney, University of Tennessee.—No essential changes have been made in the courses or methods of instruction during the past year, but decided progress has been made in many of them. The agricultural science course has been still further expanded, so as to give greater liberty of election in languages, literature, and history, and to provide more thorough and complete instruction in the sciences pertaining to agriculture. The engineering courses, which are the same in the freshman and sophomore classes for mechanical, electrical, civil, and military engineering have been further expanded, so as to provide special study under each of these heads in the junior and senior years. Some studies continue the same in all, but greater differentiation and liberty of election is provided, so as to permit students to specialize more than was possible under the old courses. In the same manner the chemical group has been arranged so as to permit students to specialize in general analytical chemistry, mining chemistry, metallurgy, pharmaceutical chemistry, or agricultural chemistry. The literary course has been rearranged so as to allow also freer election in the junior and senior classes. A course in pharmacy has been established. The department of history has been very much expanded and the work divided between two professors, one for European and American history, and the other for constitutional history and international law, with three lecturers to assist. The work in modern languages has been rearranged, so as to give more men and more time for the work in English, and to provide a separate professor, for the first time, in charge of French and German. A separate elective course has been provided in organic and agricultural chemistry in the hands of an instructor in the department of chemistry.

A mechanical hall, to be called Estabrook Hall, in honor of President Estabrook, is being erected at the cost of about $15,000. The college has outgrown its first mechanical building, and the new will be about three times as large as the old one. It will contain laboratories for hydraulic and steam testing, dynamo and dynamometer work, material testing, coal testing, oil testing, and a large general laboratory for instrument calibration and other general work. In it will also be the usual departments for wood working and iron working and the electric-lighting plant, besides storerooms for electrical goods, patterns, and plumbing supplies, coal and wood, offices for superintendent, printing, wash and dark rooms for blue-print and photographic work, a private laboratory and a general museum for displaying work of students, engineering specialties, and other things of interest to the profession. The machinery contained in the old building will be removed to the new one, and considerable new machinery and apparatus purchased for the equipment of the additional laboratories. Improved facilities are thus being provided for instruction in mechanic arts and electricity. The power will be transmitted to the different shops in the form of electricity. Two new dormitories are being erected, one to accommodate about 60 men students and the other about 40 women students; the latter is the first woman's dormitory to be erected upon the college grounds.

Acting President R. H. Whitlock, Agricultural and Mechanical College of Texas.—A new mess hall of brick has been built at a cost of $25,000, including part of equipment, as also two frame residences for professors at a cost of $3,000.

Digitized by Google

President J. M. Tanner, the Agricultural College of Utah.—The session ended June 15 was a successful one. The registration of students was 447, of an average age of 19.6 years.

A number of our students enlisted for the war when volunteers were called for. Most of these, having been well drilled in military science and tactics, were commissioned as officers in their regiments. The professor of military science was ordered to his regiment, but the military drill was continued for the balance of the year by the senior officers of the cadets. The new manual training courses have been liberally patronized during the year, and the students acquired more skill in forge and carpentry work and in cooking and sewing than was possible under the previous arrangement of courses. The sum of the expenditures during the year for college and station was $56,355.13, against $65,135.52 for the previous year. Considerable repairing work has been done on the main building, including repainting of the outside woodwork. Many needed improvements have been made on the college campus.

The experiment station has issued during the year seven bulletins and an annual report, as follows: Bulletin No. 51, Poultry Experiments; No. 52, the Chemical Composition of Utah Soils, Cache and Sanpete counties; No. 53, Utah Sugar Beets; No. 54, Cattle Feeding; No. 55, Orchard Pests; No. 56, Field Experiments with Wheat, Oats, and Barley; No. 57, By-Products of the Dairy; No. 58, Chemical Life History of Lucern, Part II, and Eighth Annual Report.

President Matthew H. Buckham, University of Vermont.—Attention is called to (*a*) the raising of standard required for preparing examinations in all departments to be 60 per cent; (*b*) abolition of all surveillance of seniors, both as to attendance and work done, which has worked well so far, action of students in enforcing fairness and honor in examinations through a jury of their own number which has been accepted by faculty in lieu of supervision; (*d*) great increase of laboratory work in departments of chemistry, biology, physics, and electricity.

The Williams Science Hall has been completed and equipped, there having been a gift of $60,000 for that purpose. Important progress has been made in the department of electricity.

President J. M. McBryde, Virginia Agricultural and Mechanical and Polytechnic Institute.—Only important change is abolition of subfreshman class. Only students of collegiate grade admitted. About $3,500 was expended for a dynamo, laboratory, and machinery for mechanical engineering department. Water is pumped by compressed air. The spring and pump are about a mile distant from the power house in which the compressor is installed. The plant was put in by the students and is watched over by them and the professor of mechanical engineering makes large use of the plant for illustrative purposes. The professor of electrical engineering makes large use of our electric-light plant. The college buildings are lighted by our direct-current dynamo and the village of Blacksburg by our alternating-current dynamo.

President Jerome H. Raymond, West Virginia University.—During the past year two new courses have been organized in the college of arts and sciences, the philosophical course, leading to the degree of bachelor of philosophy, in which one of the classical languages is required, but not both, and the modern literature course, leading to the degree of bachelor of letters, in which neither of the classical languages is required, but an equivalent amount of French or German.

The requirements for admission to the freshman class have been materially advanced during the past year. The department of ancient languages has been subdivided into two departments of Latin and Greek, and the department of modern languages has been subdivided into the departments of Germanic languages and literatures and romance languages and literatures.

The summer quarter has been instituted, beginning July 1 and continuing twelve weeks. During the present summer, which is the first summer we have had this summer quarter, we have had 178 students in residence. We have adopted the course system. A course consists of five hours' instruction a week for one quarter

Digitized by Google

(twelve weeks). Heretofore our classes have, most of them, met but two or three times a week. Now, with very few exceptions, all classes meet five times a week.

President Enoch A. Bryan, Agricultural College and School of Science of the State of Washington.—No important changes in course or method of instruction have been made. No new buildings or additions to buildings. Ferry Hall (boys' dormitory) was burned November 22, 1897. We offer a four years' course in electrical engineering, as indicated in the annual catalogue. A plant for experimental and illustrative purposes is maintained and a considerable electrical equipment is owned by the college.

President C. K. Adams, University of Wisconsin.—During the year there has been constructed a dairy barn and stock-judging building, costing $16,000. The equipment, including electric motors and other machinery, adds $2,000. The building has a frontage of 86 by 50 feet in depth, with wings 70 by 110 feet. The third floor of the barn, which is the principal one, is approached by a steel trestle bridge leading from a slight elevation near by. The stables are arranged to take advantage of our present knowledge of the requirements of sanitary engineering. There are provisions for a liberal allowance of sunshine, ample ventilation, and the walls and floors are so constructed that the rooms can be flushed with water daily if desired. The stock-judging room (with skylights) covers 40 by 70 feet. Architecturally, the building is a reproduction of a farm building in Normandy, France.

President W. H. Councill, president Agricultural and Mechanical College (colored), Alabama.—A college department has been added. Seay Hall, burnt February 9, 1898, has been rebuilt, mechanic arts building repaired, and an engine and boiler, and sawmill, painting, mattress-making, wheelwrighting, and foundry departments have been added.

President W. C. Jason, Delaware State College for Colored Students.—A frame annex to the college building was completed February 1, 1898. It is two stories high, containing dining room, kitchen, laundry, and bathrooms on first floor, and ten sleeping rooms on second floor. Its cost was about $2,000.

President John H. Jackson, Kentucky State Normal School for Colored Persons.—We have built an addition, consisting of six rooms and a chapel, to our main building, at a cost of $3,625. We have done some elementary work in electricity, but have given much more attention to awaken the interest of our students in agriculture. We have engaged in an effort to thoroughly study the growth and culture of the sugar, and we hope to be able to report upon what we have done at an early date.

President H. A. Hill, Southern University and Agricultural and Mechanical College.—The students have built an additional two-story dormitory on the farm capable of accommodating 24 pupils. Labor not included, the cost was $500. Though yellow fever interfered with our opening, we have made up the lost time by using the time usually given to the holiday vacation and by teaching extra time.

President James B. Dudley, Agricultural and Mechanical College for the Colored Race, North Carolina.—A woman's course has been added, in which is given special attention to domestic science. Two frame buildings have been erected, one for instruction in dairying, the other to be used as a barn. These buildings cost about $3,500.

President H. B. Frissell, Hampton Normal and Agricultural Institute.—A new feature of our field work has been the establishment of a model farm of 4 acres, equipped with stock and a model barn. Many of our students come from small farms, ranging in area from 1 or 2 acres up to 10 or 12, and the object of our 4-acre model farm is to give them practical experience in so managing a small area that it will grow sufficient produce to maintain at least 1 horse, 1 cow, 1 pig, some poultry, and supply a medium-sized family with the necessities of life, while maintaining, if not increasing, the fertility of the land. Aside from this, our field work has been as usual, experimentation in a simple way, to give the students practical demonstrations of the truths and principles taught in the class room. In our new domestic science building, which has been constructed during the year, 6 rooms, covering about 10,000 square feet of floor space, have been equipped for the use of the department of

Digitized by Google

agriculture. These rooms are (1) a museum and lecture room, (2) a chemical laboratory, (3) a laboratory for botany and horticulture, (4) a farm engineering room, (5) a dairy, and (6) a farm laboratory. These additions will greatly facilitate our work.

FINANCIAL NOTES.

The financial reports of the presidents of the colleges for the benefit of agriculture and the mechanic arts (excluding the college of North Carolina)[1] for 1897–98 show the following facts:

Federal aid:	
Income from land grant of 1862 (as far as reported by presidents)	[2] $594,715
Income from act of August 30, 1890 (from treasurers' reports)	[3] 1,104,000
State aid	2,459,000
Fees, and other sources of income	1,598,766
Total (omitting North Carolina Agriculture College)	5,756,541

Of these sums there were expended during the year:

For instruction in the subjects mentioned in the act of August 30, 1890, including facilities for teaching those subjects	$2,197,386
For instruction in other subjects and for other expenses	2,057,349
Total (excluding North Carolina Agricultural College)	4,254,735

Summary of statistics.

	Men.	Women.
Teachers:		
In colleges for the Caucasian race (exclusive of North Carolina College)	1,377	139
In colleges for the African race	118	86
Total	1,495	225
Students:		
(1) In colleges for the Caucasian race (exclusive of North Carolina College):

CHAPTER XLV.

STATISTICS OF NORMAL SCHOOLS.

The number of students pursuing training courses for teachers in various institutions in the United States in the scholastic year 1897–98 was 89,225. These students were in 1,376 schools of various grades. Nearly 52 per cent of the whole number, or 46,245, were in the 167 public normal schools. The 178 private normal schools had 21,293 students in training courses for teachers, public universities and colleges had 2,255, private universities and colleges had 6,065, public high schools had 7,378, and private secondary schools had 5,989 students pursuing similar courses. The following table shows the number of institutions of each class and the number of normal students in each class for four scholastic years:

Normal students reported for four years.

Classes of institutions.	1894–95.		1895–96.		1896–97.		1897–98.	
	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.	Institutions.	Students.
Public normal schools	155	36,276	160	40,421	164	43,199	167	46,245
Private normal schools	201	21,927	169	20,777	198	24,181	178	21,293
Public universities and colleges	26	1,075	27	1,691	30	1,839	23	2,255
Private universities and colleges	166	5,327	166	5,335	166	4,650	188	6,065
Public high schools	433	6,809	447	8,246	507	9,001	494	7,378
Private high schools	458	9,124	439	7,930	422	7,064	326	5,989
Grand total	1,439	80,538	1,408	84,400	1,487	89,934	1,376	89,225
In all public institutions	614	44,160	634	50,358	701	54,039	684	55,878
In all private institutions	825	36,378	774	34,042	786	35,895	692	33,347

The above statement shows that in 1897–98 nearly 63 per cent, or 55,878 students in training courses for teachers, were in public institutions. The 167 public normal schools had an average of 277 normal students to the school, while the average number to the 178 private normal schools was 120. The average number of such students in 23 public universities and colleges was 98 and in 188 private universities and colleges 32. The average number of normal students in 494 public high schools was 15, and the average number in 326 private high schools and academies was 18. Students in public and private normal schools pursuing other courses of study are accounted for elsewhere in this chapter.

The number of graduates from the public and private normal schools at the close of the year ending June, 1898, was 11,255, or almost exactly one-sixth of the number of normal students in those schools. If one-sixth of the normal students in other institutions completed their courses the total number of graduated teachers for the year must have reached 14,871.

PUBLIC NORMAL SCHOOLS.

With two exceptions, all the States make provision for the education of teachers in public normal schools. The statistics of the 167 public normal schools are summarized in Tables 1 to 8, while information concerning each school is given in Table 19.

Digitized by Google

Table 1 shows the number of public normal schools in each State. New York and Pennsylvania have 15 each; Massachusetts, 10; West Virginia, North Carolina, Mississippi, and Wisconsin, 7 each; Alabama, 6; Ohio, Minnesota, Iowa, and Missouri, 5 each. Wyoming and Nevada have no public normal schools. In the 167 schools there were 1,863 teachers employed in instructing normal students, and 241 teachers engaged wholly in other departments.

The total number of normal students in the public normal schools was 46,245, as already stated—12,578 males and 33,667 females. The enrollment in each State is shown in Table 2. These schools also had 673 students in business courses, 3,570 in secondary grades equivalent to the high school grades, and 26,104 in elementary grades, as shown in Table 2.

Table 3 shows that the total number of students and pupils receiving instruction in the public normal schools was 76,594. There were 32,080 children in the model schools attached to or used by these institutions. This 32,080 includes most of the children in the elementary grades mentioned in Table 2, but in many cases elementary schools in the neighborhood are used as model schools.

The number of colored normal students in the public normal schools was 1,763, as shown in Table 3. Nearly all these were in the public normal schools for the colored race supported by the Southern States.

The number of graduates from the normal courses of the public normal schools in 1898 was 8,188, as shown in Table 4. Of these graduates 6,645 were women and 1,543 men. There were 102 graduates from business courses and 607 from other courses.

Table 5 shows for each State the income of the public normal schools. The appropriations from States, counties, and cities for support aggregated $2,566,132 for the 167 schools, an increase of $139,947 over the previous year. The total income for the year from appropriations, tuition fees, productive funds, and from other sources was $3,445,751, an increase of $180,823 over the year 1896–97. It is probable that the greater part of the $307,409 mentioned in next to the last column of the table as "other sources and unclassified" came directly or indirectly from public appropriations.

Table 6 is an exhibit of the value of buildings and other property of the public normal schools. The number of volumes in the libraries of 150 of these institutions was 566,684, valued at $586,077. The value of buildings, grounds, scientific apparatus, etc., was $19,990,222.

The amount of public appropriations received each year for the last six years by the public normal schools is shown in Table 7. With the exception of a single year, when there was a small decrease in the appropriations, there has been a steady increase since 1892. These appropriations increased from $1,452,914 in 1892–93 to $2,566,132 in 1897–98.

Table 8 shows the amounts appropriated each year for six years for buildings and improvements in the States and Territories. There has been a decrease in the aggregate for the past two years, the $417,866 appropriated for 1897–98 being less than the aggregate for any year since 1891–92, when it was $394,635.

PRIVATE NORMAL SCHOOLS.

The number of private normal schools reporting to this office for the year 1897–98 was 178. There are many other private institutions known as normal schools, but the training of teachers is not their distinctive work. The statistics of private normal schools will be found summarized in Tables 9 to 14, while the information concerning the separate schools is given in Table 20.

Table 9 shows the number of teachers in the 178 private normal schools. There were 1,008 teachers for normal students and 736 wholly for other departments. Fifteen States and Territories have no private normal schools. In the North Atlantic and Western divisions there are only 19 such schools.

Digitized by Google

The number of students pursuing training courses for teachers in the private normal schools was 21,293, as shown in Table 10. This was a decrease of 2,888 from the previous year. The number of students in business courses was 5,031, an increase of 1,156. The number in secondary grades was 7,337, a decrease of 248. The number of pupils in elementary grades was 16,999, a decrease of 235 from the previous year. The total enrollment in all the grades and departments of these schools, as shown in Table 11, was 50,660, a net decrease of 2,215. This decrease is due to the fact that a few of the schools reported the previous year suspended and a number of others ceased to be distinctively training schools for teachers. The number of schools was thus reduced from 198 to 178.

It is also shown in Table 11 that there were 2,410 colored normal students in private normal schools, nearly all of them in colored normal schools in the South supported by donations and tuition fees. This table also shows that the number of children in the model schools used by private normal schools was 6,726.

Table 12 shows that there were 3,067 graduates from teachers' training courses, 1,164 from business courses, and 672 from other courses in the private normal schools in 1897–98. This was a decrease of 1,041 in the number of normal graduates, decrease of 347 in the number of business graduates, and a decrease of 1,034 in the number of graduates from other courses.

Table 13 shows the income received from various sources by the private normal schools so far as reported. The aggregate income of these schools was $898,909, a decrease of $127,168 from the previous year.

An exhibit of property owned by private normal schools is presented in Table 14. The number of volumes in the libraries of 140 of these schools was 194,460, valued at $197,932. The value of buildings and grounds, scientific apparatus, etc., was $5,047,507. Benefactions amounting to $240,203 were received during the year. The total money value of the endowment of the institutions reporting this item was $2,311,594.

DISTRIBUTION OF NORMAL STUDENTS.

A comparison is made in Table 15 between certain statistics of public and private normal schools. In the public normal schools only 27.20 per cent of the normal students were males, while the female students comprised 72.80 per cent of the number. In the private normal schools the number of students was almost equally divided between the sexes. In the public normal schools 17.71 per cent of the students in the school during the year graduated, while in the private normal schools the per cent of graduates was 14.40.

Table 16 is a summary, by States, of the number of students pursuing teachers' training courses in universities and colleges, in public high schools, and in private high schools and academies.

Table 17 is a general summary, by States, of all the students in the five classes of institutions reported to this office as pursuing normal or teachers' training courses in 1897–98.

Table 18 contains a list of the universities and colleges in which courses designed for the professional training of teachers are maintained. The number of normal students in each institution each year for the past six years is given. Certain universities and colleges having regularly organized departments of pedagogy did not report the number of students pursuing courses in such departments.

CHAPTER XLVI.

STATISTICS OF SECONDARY SCHOOLS.

During the scholastic year ending June, 1898, there were enrolled in institutions of various classes reporting to the Bureau of Education 626,115 secondary students. This was a gain of 41,211 over the preceding year, or more than 7 per cent. The total number of pupils enrolled in the schools of all classes in the United States for the year was 16,687,643. The secondary students comprise about 3.75 per cent of this aggregate enrollment. The secondary students enumerated were distributed among eight classes of institutions as follows:

Institutions.	Male.	Female.	Total.
Public high schools	189,187	260,413	449,600
Public normal schools	1,258	2,312	3,570
Public universities and colleges	4,797	1,846	6,643
Private high schools	52,172	53,053	105,225
Private normal schools	4,095	3,242	7,337
Private universities and colleges	28,849	12,978	41,827
Private colleges for women	.....	5,004	5,004
Manual training schools	4,021	2,888	6,909
Total	284,379	341,736	626,115

In the elementary schools of nearly all the States there are many students pursuing secondary studies where high schools are not accessible. These students and others not reported probably exceed 25,000. The aggregate number of secondary students in the United States may be safely estimated at 650,000. This total does not include the 70,950 students enrolled in commercial schools, although many of the branches taught in these institutions are equivalent to high-school studies. These students who spend only a few months in the commercial schools are not given the standing of students who are enrolled for the entire year in secondary schools.

For the year 1897-98 there were 5,315 public high schools and 1,990 private high schools and academies reporting to this office. This chapter is devoted almost exclusively to the statistics of these 7,305 secondary schools. The following table shows the growth of public and private high schools and academies for the past nine years:

Year reported.	Public.			Private.			Total.		
	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.	Schools.	Teachers.	Students.
1889-90	2,526	9,120	202,963	1,632	7,209	94,931	4,158	16,329	297,894
1890-91	2,771	8,270	211,596	1,714	6,231	98,400	4,485	14,501	309,996
1891-92	3,035	9,564	239,556	1,550	7,093	100,739	4,585	16,657	340,295
1892-93	3,218	10,141	254,023	1,575	7,199	102,375	4,793	17,340	356,398
1893-94	3,964	12,120	289,274	1,982	8,609	118,645	5,946	20,129	407,919

Digitized by Google

While there has been a small decrease in the number of private high schools and academies within the last four years, the increase in the number of public high schools has been phenomenal. In 1889–90 there were 2,526 public high schools with 202,963 secondary students, while in 1897–98 the number had reached 5,315 schools with 449,600 students.

The relative progress of public and private high schools for the past nine years is shown in the following table, which gives the proportion of the number of schools, teachers, and students of the two classes:

Year reported.	Per cent of number of schools.		Per cent of number of teachers.		Per cent of number of students.	
	Public.	Private.	Public.	Private.	Public.	Private.
1889–90	60.75	39.25	55.85	44.15	68.13	31.87
1890–91	61.78	38.22	57.03	42.97	68.26	31.74
1891–92	66.19	33.81	57.42	42.58	70.40	29.60
1892–93	66.23	33.77	60.25	39.75	70.78	29.22
1893–94	66.67	33.33	60.21	39.79	70.91	29.09
1894–95	68.37	31.63	62.26	37.74	74.74	25.26
1895–96	70.25	29.75	64.21	35.79	78.11	21.89
1896–97	70.87	29.13	63.71	36.29	79.18	20.82
1897–98	72.76	27.24	65.72	34.28	81.03	18.97

For the year ending June, 1890, the public high schools had about 68 per cent of the number of secondary students, and for the year ending June, 1898, about 81 per cent.

It was not until 1889–90 that the United States Bureau of Education attempted to collect statistics from all the public high schools, although information was collected concerning public high schools in the larger cities as early as 1876. The following table shows the percentage of the number of public and private high-school students to the total population each year for twenty-seven years:

Number of secondary students in public and private high schools.

Year.	Secondary students.					
	In public high schools.	Per cent of population.	In private high schools.	Per cent of population.	In both classes of schools.	Per cent of population.
1871			38,280	0.097		
1872			48,060	.120		
1873			56,640	.137		
1874			61,860	.145		
1875			68,580	.157		
1876	22,982	0.051	73,740	.164	96,722	0.215
1877	24,925	.054	73,560	.160	98,485	.214

1897–98	449,600	.618	105,225	.144	554,825	.762

a Previous to 1890 only the pupils in public city high schools are given. From 1890 onward all public high schools are included.

Digitized by Google

In the above table the statistics of the years from 1871 to 1889 have been carefully corrected upon the basis of reports for later years. Prior to 1890 the number of students reported by a large number of the private high schools included the whole number in attendance, the elementary pupils as well as the secondary students. An attempt has been made in the preceding table to eliminate all pupils below the high school grades.

PUBLIC HIGH SCHOOLS.

The statistics of public high schools are summarized in Tables 1 to 15 and the information concerning each school is given in detail in Table 42. Tables 16 to 29 relate exclusively to private high schools and academies, while Tables 30 to 38 combine the statistics of public and private high schools. Tables 39 and 40 show the distribution of secondary students by States in the various classes of institutions.

The number of public high schools reporting to this office for the year 1897–98 was 5,315, a gain of 206 schools over the preceding year. The number of these schools which were departments of city or village systems was 4,695, while only 620 were reported as independent. Of the number belonging to city or village systems 700 are in cities which have 8,000 population or over. The 620 independent public high schools are generally outside the cities or villages.

The number of teachers instructing students in the public high schools as shown in Table 1 was 17,941, the number of men being 8,542 and the number of women 9,399. This was an increase of 1,132 in the number of teachers over the preceding year.

Table 1 also shows that the public high schools had 449,600 secondary students, 189,187 males and 260,413 females. There was a gain of 40,167 students, or only a little less than 10 per cent. The male students comprised 42.08 per cent of the whole number, and the female students 57.92 per cent.

The States of the North Central Division had 225,578 of the public high school students, or considerably more than half the total number for the United States. The North Atlantic Division had 141,747 secondary students in the public high schools, the South Central 32,888, the South Atlantic 24,383, and the Western Division 25,004.

Included in the 449,600 there were 6,306 colored secondary students. It is noticeable that only 2,858 of these colored students were in the two Southern divisions, while the other divisions had 3,448. If the 681 colored secondary students in Missouri be subtracted from the number in the North Central Division and added to the total in the two Southern divisions the number would be 3,539 for the South and 2,767 for the Eastern, Northern, and Western sections of the country.

STUDENTS AND COURSES OF STUDY.

Table 2 shows the number of secondary students in classical and scientific courses known to be preparing for college, the number of graduates in 1898, the number of college preparatory students in the graduating classes, and the number of public high school students in military drill. The number preparing for college was 51,066, or 11.36 per cent of the whole number. The number of graduates was 53,022, or almost 12 per cent of the total enrollment. The number of graduates prepared for college was 14,552, or 27.45 per cent of the total number of graduates. The number of students in military drill was 9,032, an increase of 371 over the preceding year.

a Per cent of number of graduates.

The above table is a synopsis of the summaries exhibited in Tables 2 to 11. About 14 per cent of the male students and nearly 10 per cent of the female students were preparing for college. About 10 per cent of the male students and 13 per cent of the female students enrolled graduated in 1898. Nearly 35 per cent of the male graduates and about 23 per cent of the female graduates had prepared for college.

As shown in the above table, there were 223,307 public high school students studying Latin, or almost 50 per cent of the whole number. More than 46 per cent of the male students and 52 per cent of the female students were studying Latin in 1897-98. The number in each State is given in Table 3. The numbers and percentages for the other leading high school studies are given in the above table for the United States, and by States in detail in Tables 3 to 11.

Latin was taught in 4,488 of the 5,315 public high schools. This was an increase of 260 in the number of schools offering Latin. The number of students was 25,293 more than the preceding year, an increase of more than 12 per cent.

The table which follows shows the per cent of students in certain courses and studies each year for the past nine years. The per cent of students in Latin increased from 34.69 in 1889-90 to 49.67 in 1897-98. In several other branches the increase was quite as marked.

a Per cent of total number of graduates.

There has been a falling off in the proportion of students preparing for college since 1889–90, although the actual number each year has been larger. In 1889–90 the per cent of public high school students preparing for college was 14.44 and in 1897–98 only 11.36.

Table 12 gives the statistics of public high schools in cities of 8,000 population and over. There were 700 such schools, with 6,880 instructors and 208,775 students, in 1897–98. Outside of these cities there were 4,615 public high schools, with 11,061 instructors and 240,825 students. In the cities these schools had an average of 298 students to a school, while the average outside of the cities was 52 students to a school, as shown in Table 14.

EQUIPMENT AND INCOME.

Table 15 exhibits the equipment and income of public high schools in each State. The number of volumes in the libraries of 4,341 schools was 2,380,895; the value of grounds, buildings, scientific apparatus, etc., owned by 4,300 schools was $83,096,050. Only 1,905 schools were able to report the amount of State or municipal aid received, owing to the fact that in most cases separate accounts are not kept of the proportion of public appropriations used by the high schools. The amount of public money received by the 1,905 high schools was $4,816,237. The amount received from tuition fees by 1,646 schools was $552,932; the amount received from 202 schools from productive funds was $209,847, and the amount received by 786 schools from other sources unclassified was $1,630,831. It is certain that nearly all of the latter item should be credited to State, county, or city appropriations.

The total income of 2,141 schools reporting this item was $7,209,847. This was an average of nearly $3,368 to the school. It is hardly probable that this average would be maintained by the 3,174 schools not reporting this item.

PRIVATE HIGH SCHOOLS AND ACADEMIES.

The statistics of private high schools, academies, and seminaries having students of no higher grade than secondary are summarized in Tables 16 to 29, inclusive. The tables from 16 to 26 are similar in form to Tables 1 to 11, in which the statistics of public high schools are summarized, and the two series may be compared. Tables 27 and 15 may also be compared. Table 30 is a comparative showing of the average numbers of teachers and students in public and private high schools.

The number of private secondary schools reporting for 1897-98 was 1,990, or 110 less than the number reporting the year before. Table 16 shows that these schools had 9,357 teachers instructing secondary students, a decrease of 217, and that these schools had 105,225 students, a decrease of 2,408 from the previous year. The total number of secondary students included 1,659 colored students, 260 in the North Atlantic division, 15 in the North Central and Western divisions, and 1,384 in private colored schools in the two Southern divisions. The number of elementary pupils reported by the 1,990 schools aggregated 124,807.

STUDENTS AND COURSES OF STUDY.

The number of students in private secondary schools preparing for college was 26,693, about 25 per cent of the number enrolled and a decrease of 3,637 from the year before. As shown in Table 17, the number of these college preparatory students preparing for the classical course was 16,361, and the number preparing for scientific courses 10,332. The number of graduates in the class of 1898 was 12,148, or nearly 12 per cent of the number of secondary students enrolled. In the classes that graduated there were 5,388 students prepared for college, or more than 44 per cent of the graduates. There were 7,854 students in military drill, an increase of 1,206 over the preceding year.

Tables 18 to 23 give the number of students in each of 18 high school studies in each State, while the percentages of students in these studies are shown in Tables 24, 25, and 26. The following table is a synopsis showing the number and per cent of students by sex in college preparatory courses and in the leading high school studies in private institutions of secondary grade in 1897-98:

Studies in certain courses and studies in private high schools and academies.

Courses, studies, etc.	Number students.	Per cent of total number of secondary students.	Male students.	Per cent of total number of male students.	Female students.	Per cent of total number of female students.

a Per cent of total number of graduates.

Digitized by Google

A comparison of this table with the similar table relating to public high schools will show that while the private secondary schools were preparing over 25 per cent of their students for college but little more than 11 per cent of the public high school students were making such preparation. In the private schools 48.45 per cent studied Latin, as against 49.67 per cent in the public high schools. The per cent studying algebra in the private high schools was 51.70 and in the public high schools 56.13 per cent.

The progress made by the private high schools and academies in the past nine years, as indicated in the increased percentages of students in certain courses and studies, may be seen from the following table:

Per cent of total number secondary students in private high schools and academies in certain courses and studies.

Students and studies.	1889–90.	1890–91.	1891–92.	1892–93.	1893–94.	1894–95.	1895–96.	1896–97.	1897–98.

a Per cent of number of graduates.

The per cent of graduates has increased steadily from 8.50 in 1890 to 11.54 in 1898. The proportion of graduates prepared for college to the total number of graduates each year has decreased from 61.37 per cent in 1891 to 44.35 per cent in 1898. As in the case of the public high schools, there has been a marked increase in the number of students in Latin. In 1889–90 the per cent was 31.32, and in 1897–98 it had increased to 48.45. In the nine years the proportion studying algebra increased from 37.12 to 51.70 per cent. In the same period the number studying Greek increased from 7.02 to 10.43 per cent. In several other leading high school studies the increase is not less marked.

EQUIPMENT AND INCOME.

The equipment, income, benefactions, value of endowment, etc., of the private secondary schools are exhibited in Table 27. Of the 1,990 schools, 1,397 reported libraries with an aggregate of 1,718,631 volumes. The value of buildings, grounds, scientific apparatus, etc., owned by 1,421 of these schools was $60,769,995. Only 297 of these schools received aid from public funds to the amount of $162,299. The amount received in tuition fees by 1,245 schools was $6,349,804, while 304 schools received $838,978 from productive funds. Receipts from sources not indicated amounted to $976,755 for 430 schools. The aggregate income of 1,316 schools was $8,329,836. Benefactions amounting to $1,298,670 were received by 181 schools. The total money value of the endowment of 358 of these institutions was $44,404,372.

DENOMINATIONAL SCHOOLS.

The number of private secondary schools reported as under the control of religious denominations in 1897-98 was 968. There were 52,604 students in these denominational schools, as against 52,621 in nonsectarian schools. In Table 43, which gives in detail the statistics of private secondary schools, the name of the religious denomination controlling each school is given in column 4. From Tables 28 and 29, which show the number of schools in each State controlled by each religious denomination, the following statement is condensed:

Religious denomination.	Schools.	Instructors.	Students.
Nonsectarian	1,022	4,653	52,621
Roman Catholic	351	1,662	14,325
Baptist	92	401	6,412
Presbyterian	99	439	5,348
Episcopal	108	710	5,315
Methodist Episcopal South	51	205	4,157
Methodist	56	289	4,093
Friends	55	297	3,597
Congregational	53	225	3,362
Lutheran	33	135	1,780
All other denominations	70	341	4,215
Total	1,990	9,357	105,225

PUBLIC AND PRIVATE SECONDARY SCHOOLS.

Table 30 presents a comparison of certain statistics of public and private high schools. For example, it is shown that the public high schools have an average of about 85 students to a school, while the average number for the private high school is 54.

The statistics of public and private secondary schools are combined in Tables 31 to 38. Table 31 shows that the 7,305 schools had 27,298 teachers for secondary students and 554,825 students. Of these secondary students 241,359, or 43.50 per cent, were males and 313,466, or 56 50 per cent, were females. It is shown in Table 32 that 77,759, or 14 per cent, of the secondary students were preparing for college. The graduates for 1898 numbered 65,170, or nearly 12 per cent of the entire number enrolled. The number of graduates who had prepared for college was 19,940, or 30.60 per cent of the whole number of graduates.

The number and per cent of high school students in each of the eighteen leading high school studies in each State is given in Tables 33 to 38. The following synopsis shows the number and per cent of students in certain courses and studies for the United States:

a Per cent of number of graduates.

The progress made by public and private secondary schools in the increased percentage of students pursuing certain studies has been noticed in referring to the summaries of the two classes of schools separately.

In 1889–90 the per cent of secondary students in public and private high schools studying Latin was 33.62. For the eight years since there has been each year a large increase in the number of Latin students, until the percentage for 1897–98 was 49.44. There has been but little variation in the proportion of students in Greek, and but a small increase in the percentage of students in French, while the percentage of those studying German increased from 11.48 in 1889–90 to 14.24 in 1897–98. In 1889–90 the per cent of students in algebra was 42.77, and in 1897–98 it had increased to 55.29. The per cent in geometry increased from 20.07 to 26.59 in the same time. The percentage of students in history other than history of the United States increased from 27.83 to 37.68 per cent in the eight years. These percentages for each of the nine years are shown in the following synopsis:

Per cent of total number of secondary students in public and private high schools and academies in certain courses and studies, etc.

SECONDARY STUDENTS IN THE UNITED STATES.

The distribution of secondary students enrolled in 1897-98 in eight classes of institutions is given by States in Tables 39 and 40. It is shown that of 626,115, the total number of secondary students in the United States as reported to this Bureau, 459,813 were in public institutions and 166,302 in private institutions. In the public institutions 449,600 were in public high schools, 6,643 in preparatory departments of universities and colleges, and 3,570 in public normal schools. In the private institutions 105,225 were in private high schools and academies, 46,831 in preparatory departments of private universities and colleges, 7,337 in private normal schools, and 6,909 in manual training schools.

The number of secondary students to each 1,000 population in the United States and in each State is given in Table 41. For the whole country there was an average of 8.60 secondary students to each 1,000 of population. The average for the North Atlantic Division was 9.61; for the South Atlantic, 4.87; for the South Central, 5.16; for the North Central, 10.87; for the Western Division, 9.05.

The number of students in higher education was 144,477, as shown also in Table 41. This number includes all students who in 1897-98 were receiving higher instruction in colleges, resident graduate students in universities and colleges, and all professional students in theology, medicine, and law. The independent professional schools are included, as well as those classed as departments of universities and colleges. Students of normal schools and schools of dentistry, pharmacy, veterinary surgery, and nurse training are not here included. The last column of Table 41 shows that the number of students in higher education to each 1,000 population was 1.98. The average in the North Atlantic Division was 2.26; in the South Atlantic, 1.98; in the South Central, 1.45; in the North Central, 2.02; and in the Western Division, 2.08.

Table 42 gives in detail the statistics of the 5,315 public high schools reporting to this office. Table 43 gives similar statistics of private high schools, academies, and other private institutions for secondary instruction.

Table 44 shows the number of public and private high schools for boys only, the number for girls only, and the number of coeducational schools of this grade in each State.

CHAPTER XLVII.

CITY SCHOOL SYSTEMS.[1]

TABLE 1.—*Summary of statistics of cities containing over 8,000 inhabitants, showing increase from previous year.*

	1896–97.	1897–98.	Increase.	Per cent of increase.
Enrollment	3,594,675	3,799,881	205,206	5.71
Aggregate number of days' attendance	507,622,259	539,048,222	31,425,963	6.19
Average daily attendance	2,693,299	2,843,445	150,146	5.58
Average length of school term in days	188.5	189.6	1.1	.....
Enrollment in private and parochial schools	824,609	872,406	47,797	5.79
Number of supervising officers	3,998	4,429	431	10.78
Number of male teachers	5,773	6,005	232	4.02
Number of female teachers	68,344	72,355	4,011	5.87
Whole number of teachers	74,117	78,360	4,243	5.72
Number of buildings	8,604	9,113	509	5.91
Number of sittings	3,383,405	3,500,970	117,565	3.48
Value of school property	$267,425,289	$289,325,794	$21,900,505	8.19
Expenditure for tuition	48,772,485	52,064,649	3,292,164	6.75
Total expenditure	84,866,092	88,773,647	3,907,555	4.60

The statistical tables[2] for 1897–98 show the usual increases of enrollment and attendance, the latter being relatively somewhat less than the former, indicating a slightly lower degree of regularity. The average school term increased by 1.1 days over 1896–97, the greater part of the increase coming from the North Atlantic Division. The average number of pupils in attendance to each teacher is less than in the previous year, since the number of teachers employed has increased more rapidly than the pupils. Supervising officers have increased at a disproportionate rate, in accordance with the tendency which has been marked for several years. By one of those combinations of circumstances which sometimes occur, the number of these officers did not show the usual increase in 1896–97, being in that year only 60 more than in 1895–96, though teachers increased by nearly 4,000. During the year just passed, however, the supervisors were augmented by 431, which made them more numerous than ever before, not only in actual numbers but in proportion to the number of teachers employed. Women teachers are increasing more rapidly than men—but that is an old story.

The financial rewards of the profession of teaching are plainly increasing. The average salary of teachers and supervisors was greater during 1897–98 than in the year before, and, while it was still a few cents behind that of 1895–96, the tendency is undoubtedly upward.

The average salaries for eight years past have been:

1890–91	$606.00	1894–95	$624.74
1891–92	612.18	1895–96	629.49
1892–93	607.62	1896–97	624.37
1893–94	608.94	1897–98	[3]628.88

Digitized by Google

Important increases in salaries, more or less general, have been made recently in several of the large cities, notably in Boston, Chicago, and New York. In some other cities, on the contrary, lack of funds has necessitated reduction of teachers' incomes, either by reducing the rate of pay or by closing the schools prematurely, which means a reduction just as surely.

In Boston the school committee formulated a new salary schedule in 1896, providing for certain gradual increases, the full effect of the schedule to be reached in 1900. The principal changes involved were stated by the salary committee to be as follows:

"Raising the minimum salary of a junior master in the high schools from $1,008 to $1,476, and carrying the maximum to $3,060, an increase of $180; starting assistants in high schools at $972, an increase of $216, and carrying the maximum to $1,620, an increase of $240; raising the maximum of masters in grammar schools from $2,880 to $3,180; raising the annual increase of submasters from $60 to $120; raising the maximum of first assistants in grammar schools $132; abolishing the grade of second, third, and fourth assistant in grammar and primary schools, making the present incumbents' assistants dating from September 1, 1896; raising the minimum of assistants in grammar and primary schools $96, and the maximum $192; increasing the salary of kindergarten teachers about 10 per cent; increasing the salary of assistants in evening elementary schools from $1.50 to $2 per evening; making a new grade of first assistants in primary schools."[1]

The full salary schedule now in force in Boston, embodying these changes, is as follows:[2]

Superintendent	$4,200.00
Six supervisors, each	3,780.00
NORMAL SCHOOL.	
Head master	$3,780.00
Master, first year, $2,340; annual increase, $144; maximum	3,060.00
Assistants, first year, $1,140; annual increase, $60; maximum	1,620.00
LATIN AND HIGH SCHOOLS.	
Head masters	$3,780.00
Masters	3,060.00
Junior masters, first year, $1,476; annual increase (for eleven years), $144; salary for the twelfth and subsequent years, with the rank of master	3,060.00
Assistant principal, Girls' High School	2,040.00
Assistant principal, Roxbury High School, first year, $1,620; annual increase, $72; maximum	1,836.00
Assistants, first year, $972; annual increase, $72; maximum	1,620.00
MECHANIC ARTS HIGH SCHOOL.	
Head master	$3,780.00
Masters	3,060.00
Junior masters, first year, $1,476; annual increase (for eleven years), $144; salary for the twelfth and subsequent years, with the rank of master	3,060.00
Instructors, first year, $1,500; annual increase, $120; maximum	2,340.00
Assistant instructors, first year, $972; annual increase, $72; maximum	1,620.00
Instructor of metal working, first year, $1,800; annual increase, $60; maximum	2,580.00
GRAMMAR SCHOOLS.	
Masters, first year, $2,580; annual increase, $120; maximum	$3,180.00
Submasters, first year, $1,500; annual increase, $120; maximum	2,340.00
First assistants, first year, $972; annual increase, $48; maximum	1,212.00
Assistants, first year, $552; annual increase, $48; maximum	936.00
PRIMARY SCHOOLS.	
First assistants, first year, $984; annual increase, $48; maximum	$1,080.00
Assistants, first year, $552; annual increase, $48; maximum	936.00
KINDERGARTENS.	
Principals, first year, $600; annual increase, $48; maximum	$792.00
Assistants, first year, $432; annual increase, $48; maximum	624.00

EVENING SCHOOLS.

Principal, Evening High School (per week), first year, $40; second year, $45; third year and subsequently	$50.00
Assistants, Evening High School (per evening)	4.00
Principals, evening elementary schools, in schools where average attendance for month is 100 pupils or more (per evening)	5.00
In schools where average attendance for month is less than 100 (per evening)	4.00
First assistant, evening elementary schools, in schools where average attendance for month is 75 pupils or more (per evening)	2.50
In schools where average attendance for month is less than 75 (per evening)	2.00
Assistants, evening elementary schools (per evening)	2.00
Principals, evening drawing schools (per evening), first year, $7; second year and subsequently	8.00
Assistants, evening drawing schools (per evening), first year, $4; second year, $5; third year and subsequently	6.00

SPECIAL INSTRUCTORS.

Special instructors of music	$2,640.00
Assistant instructors of music	888.00
Director of drawing	3,000.00
Assistants to director of drawing (2)	1,500.00
Master of evening drawing schools	1,200.00
Assistant to director of drawing	800.00
Assistant to director of drawing[1]	2,508.00
Teacher of German, girls' high and girls' Latin schools	1,500.00
Teacher of chemistry, Girls' High School	1,620.00
Laboratory assistant, Girls' High School	804.00
Laboratory assistant, Roxbury High School	804.00
Teacher of physical training, Brighton High School	700.00
Teacher of physical training, girls' high and girls' Latin schools	900.00
Teacher of physical training and reading, girls' high and girls' Latin schools	900.00
Teacher of physical training, East Boston High School	300.00
Teacher of physical culture, Roxbury High School	1,200.00
Director of kindergartens	2,880.00
Assistant teacher of the theory and practice of the kindergarten, Normal School	1,380.00
Teacher of songs and games, Normal School	240.00
Director of French and German	3,000.00
Assistants	1,500.00
Director of physical training	3,000.00
Assistant	2,280.00
Horace Mann School for the Deaf:	
Principal	2,880.00
Assistant principal, first year, $1,152; annual increase, $72; maximum	1,440.00
Assistants, first year, $780; annual increase $72; maximum	1,284.00
Principal of manual training schools	2,508.00
Instructors in manual training schools	1,620.00
Instructors in manual training schools	1,200.00
Assistant instructors in manual training schools, first year, $804; annual increase, $48; maximum	996.00
Principal of schools of cookery	1,500.00
Instructors in schools of cookery, first year, $552; annual increase, $48; maximum	936.00
Instructor in school on Spectacle Island (including all expenses connected with the school, except for books)	400.00
Instructor of military drill	2,000.00
Armorer	1,050.00
Teachers of sewing:	
One division	132.00
Two divisions	228.00
Three divisions	324.00
Four divisions	408.00
Five divisions	492.00
Six divisions	564.00
Seven divisions	636.00
Eight divisions	696.00
Nine divisions	744.00

[1] To give instruction in drawing in the Normal School, and to assist the director of drawing.

Digitized by Google

Teachers of sewing—Continued.	
Ten divisions	$702.00
Eleven divisions	840.00
All over eleven divisions	888.00
Special assistant teachers, first grade (per day)	1.00
Special assistant teachers, kindergartens (per week)	5.00

In Chicago an active crusade during the spring and summer of 1898 resulted in the adoption of the following schedule,[1] which contained important advances, especially for teachers of the lower grades and for those of long service:

	Per annum.
Superintendent of schools	$7,000
District superintendent of schools,[2] during the first two years of service in such position	3,500
District superintendent of schools, after two years of service in such position	4,000

SUPERVISORS.

Supervisor of modern languages	3,000
Supervisor of singing (high school grades)	2,400
Supervisor of singing (primary grades)	2,400
Supervisor of drawing (high schools)	2,500
Supervisor of drawing (grammar and primary grades)	2,800
Supervisor of physical culture	2,400
Supervisor of schools for the deaf	1,500
Supervisor of manual training in grammer grades	2,000
Assistant supervisor of drawing (grammar and primary grades)	2,200
Supervising principal of kindergartens	1,200

TEACHERS OF SPECIAL STUDIES.

Special teachers of drawing and music in primary and grammar grades.

For first year of service	1,000
For the second year	1,200
For the third year	1,300
For the fourth year	1,400
For the fifth year	1,500
For the sixth and subsequent years	1,600

HIGH SCHOOLS.

Grouping of principals.

First group.—$2,500 the first year, increasing $100 a year until a maximum of $3,000 is reached.
Second group.—$2,000 the first year, increasing $100 a year until a maximum of $2,500 is reached.

Grouping of instructors.

First group.—$1,500 the first year, increasing $100 a year until a maximum of $2,000 is reached.
Second group.—$1,200 the first year, increasing $100 a year until a maximum of $1,500 is reached.
Third group.—$850 the first year, $900 the second year, increasing $75 a year until a maximum of $1,200 is reached.

Teachers of German, French, and drawing.

First group.—$1,200 the first year, increasing $50 a year until a maximum of $1,500 is reached.
Second group.—$750 the first year, increasing $50 a year until a maximum of $1,200 is reached.
High school substitutes, $4 to $5 per day, at the discretion of the superintendent. Substitutes to be paid for days of actual service.

CHICAGO NORMAL SCHOOL.

Principal, $5,000. Substitutes to be paid the same as high school substitutes.

PRINCIPALS OF ELEMENTARY SCHOOLS.

Principals of schools shall receive $1,200 per annum for the first year's service, increasing $100 a year to a maximum salary.
First group.—For schools having an average membership for the school year of 700 or more pupils the maximum salary shall be $2,500 per annum.
Second group.—For schools having an average membership for the school year of 300 to 700 pupils the maximum salary shall be $2,200 per annum.

[1] From the Directory of the Public Schools of the City of Chicago for 1899.
[2] There are eight district superintendents, and one assistant superintendent in charge of high schools who ranks as a district superintendent.

Digitized by Google

Third group.—For schools having an average membership for the school year under 300 pupils the maximum salary shall be $1,500 per annum.

Whenever the membership of a school is reduced by transfer of pupils to other schools, or by the opening of a new school, the salary of the principal shall not be reduced for two years on account of the reduced membership.

Assistants to principals.

Assistants to principals, each, $1,175 per annum.

Head assistants.

For year beginning January 1, 1898, $975, and advancing $50 each year until a maximum salary of $1,175 is reached. Head assistants who began service before January 1, 1898, to receive $75 advance upon the schedule of 1897.

Extra teachers.

For year beginning January 1, 1898, $925, and advancing $50 each year until a maximum salary of $1,175 is reached.

Eighth grade teachers.

For year beginning January 1, 1898, $925, and advancing $50 each year until a maximum salary of $1,075 is reached.

Assistant teachers in grammar grades.

For first year of service	$500
For second year of service	550
For third year of service	625
For fourth year of service	675
For fifth year of service	725
For sixth year of service	800
For seventh year of service	825

After January 1, 1898, teachers who have completed the seventh year of service to receive an advance of $75 for the first year and $50 each additional year until a maximum salary of $1,000 is reached.

Assistant teachers in primary grades.

For first year of service	$500
For second year of service	550
For third year of service	575
For fourth year of service	650
For fifth year of service	700
For sixth year of service	775
For seventh year of service	800

After January 1, 1898, teachers who have completed the seventh year of service to receive an advance of $75 for the first year and $50 each additional year until a maximum salary of $1,000 is reached.

TEACHERS IN KINDERGARTENS.

Morning sessions

Directors:	
First year of service	$500
Second year of service	550
Third year of service	600
Fourth year of service	650
Fifth and subsequent years	700
Assistants:	
First year of service	350
Second year of service	400
Third year of service	450
Fourth and subsequent years	500

Directors in all-day sessions to be paid the same salaries as primary grade teachers to a maximum of $1,000 per annum. Assistants in all-day sessions to be paid the same salaries as primary grade teachers to a maximum of $725 per annum.

All changes in salary to take place at the commencement of the school month succeeding the expiration of the year's service.

Substitutes.—Experienced substitutes to be employed at the discretion of the superintendent at a compensation varying from $2.50 to $4 per day for each day of actual service, according to the experience of the substitute so employed.

Cadets.—Cadets who have completed the training course shall receive for cadet service at the rate of $20 per month; as substitutes at the rate of $2.50 per day.

Teachers of Latin.—Grade teachers having charge of Latin classes in seventh and eighth grades and grammar grade teachers who also teach German in connection with regular grade work to be paid

Digitized by Google

$50 per annum, in addition to the regular schedule, provided that no such teacher shall receive more than the maximum salary of grade teachers.

Reserve teachers.—Eight reserve teachers, one for each school district, to be employed at the discretion of the superintendent at a compensation of $800 per annum each.

Compensation of acting principal.—An additional salary of 25 per cent to be added to the salary of a head assistant, or an eighth grade teacher, when such assistant acts as principal during the absence of the principal of the school.

Compensation for acting head assistants.—Any teacher acting as head assistant during her absence on account of sickness to be paid at the rate of $975 per annum—the salary for the first year of service of said position—beginning two weeks after the absence of said head assistant.

The consolidation of the several municipalities forming Greater New York was followed by an advance in teachers' salaries in the boroughs other than that of Manhattan to bring them more nearly to the Manhattan standard. This involved heavy increases in many cases. The original consolidation law permitted the borough school boards to fix the salaries of superintendents and teachers, and left the whole matter to their discretion. The early increases mentioned, therefore, were due to local action. But in the spring of 1899 the matter was brought before the State legislature, and several bills were advocated with a view to prescribing a minimum salary, and that known as the "Ahearn bill" finally became a law. Following is its text:

SECTION 1. Section ten hundred and ninety-one of chapter three hundred and seventy-eight of the laws of eighteen hundred and ninety-seven is hereby amended to read as follows:

SEC. 1091. Each school board shall have the power to adopt by-laws fixing the salaries of the borough and associate superintendents, of principals and branch principals, and of all other members of the supervising and teaching staff, and such salaries shall be regulated by merit, by the grade of class taught, by the length of service, or by the experience in teaching of the incumbent in charge, or by such a combination of these considerations as the school board may deem proper. Said salaries need not be uniform throughout all the several boroughs, nor in any two of them, nor throughout any one borough. The salaries fixed and established and duly payable in the different schools of the territory hereby consolidated, as these salaries were on the first day of January, eighteen hundred and ninety-eight, shall be and remain the salaries in the schools of the several boroughs hereby constituted until the same shall be changed or modified as provided for in this section. No regular teacher in the public schools of any of the boroughs shall be paid a sum less than six hundred dollars per annum. No teacher shall, after ten years of service in the public schools of said boroughs, receive less than nine hundred dollars per annum; nor shall any teacher, after fifteen years of service in said schools, receive less than twelve hundred dollars per annum; and no vice-principal, head of department, or first assistant in said schools shall be paid less than fourteen hundred dollars per annum; and no male teacher, after twelve years of service in said schools, shall receive less than two thousand and one hundred and sixty dollars per annum: *Provided, however*, That the service of such teacher, vice-principal, head of department, or first assistant shall have been approved, after inspection and investigation, as fit and meritorious by a majority of the borough board of school superintendents. For all purposes affecting the increase of salaries of the teachers in any school, the principal of such school shall have a seat in the borough board of superintendents, with a vote on all increases of salaries of teachers in said school. The salaries of the women principals in said schools shall be increased, by the addition of two hundred and fifty dollars in each year, until they receive the sum of two thousand and five hundred dollars per annum; and the salaries of the male principals in said schools shall be increased, by the addition of two hundred and fifty dollars in each year, until they receive the sum of three thousand and five hundred dollars per annum; and no male principal, after ten years of service as principal in said schools, shall receive less than three thousand five hundred dollars per annum; and no woman principal of ten years' service as principal in said schools shall receive less than twenty-five hundred dollars per annum: *Provided, however*, That the service of such principal shall have been approved, after inspection and investigation, as fit and meritorious by the borough board of superintendents; but these provisions shall not apply to principals of schools of less than twelve classes. No salary now paid to any public school-teacher in the city of New York shall be reduced by the operation of this act.

SEC. 2. The board of estimate and apportionment is hereby authorized and required to direct the issue of revenue bonds for the purpose of providing funds to carry into effect the provisions of this act.

SEC. 3. This act shall take effect immediately.

THE AVERAGE CITY SCHOOL SYSTEM.

It is often said that the most favorable conditions for public education exist in the city of moderate size; that is, with a population of about 40,000. Without going fully into the reasons for this view, it may be said that in cities of this size the population is sufficiently compact to allow schools large enough for all purposes of grading and classification, which is not the case in the small city, the village, or the country district; and, on the other hand, the population is usually more homogeneous than in the great cities; there are not such extremes of wealth and poverty, and the people as a whole take more personal interest in the schools. It happens that the average population of all the cities in the country corresponds closely with that population which is considered most favorable for school work, and the average of the educational conditions of all the cities substantially coincides with what may be expected in a city of that ideal size. A discussion of those averages, therefore, receives an added interest from that coincidence.

The average population of the cities of over 8,000 inhabitants in 1890 was 41,164, and at the present time it appears, from an estimate based on school enrollment, to be about the same, with probably an increase of a few hundred. The average of the enrollment for the 626 city systems in 1897–98 is 6,070 pupils in the public schools and 1,393 in the private and parochial institutions. Of the 6,070 public school children 4,542 is the average number in daily attendance. The number of superintendents and other supervising officers is 7 to a city, the proportion of the sexes being about 4 men to 3 women. 125 teachers, 9 or 10 of them being men, is the average number employed, each teacher averaging 36 pupils in attendance. The average city has 15 buildings, each worth, with its appurtenances, $31,748, and accommodating 8 or 9 teachers and 312 pupils daily, but with seats for 72 other pupils. $141,810 is the average amount spent for all purposes in a year, $83,170 of it going to supervisors and teachers, the average salary of whom is $628.88. The schools are open nine and one-half months of twenty days each, and the average time that each child attends is about two days more than seven months. For each day that a pupil is present he costs 16¼ cents, of which 9⅞ cents are for his instruction.

These figures represent the average conditions of education in the cities. In contrast with them let us place the statistics of the country schools and villages, which may be obtained by deducting the statistics of cities from those of the United States as a whole. In the great majority of schools other than city schools there is but a single teacher to a schoolhouse, the average for the United States being 1.4 teachers and 48.2 pupils enrolled for each building. The attendance is naturally less regular in the country than in the city; while three-fourths of the pupils may be expected to be present every day in the town, only two-thirds of the country children manage to get to school regularly. City pupils have the advantage of an annual school term three and one-fourth months longer than that of their country cousins, and each enrolled child in the rural schools averages only eighty-three days of actual instruction a year.

The cost of country schoolhouses is ridiculously small as compared with the elaborate city buildings, and the outlay required per pupil is only about one-fourth as much in the former case as in the latter. An average country schoolhouse, site, and all, costs only $872.

The wages of the country schoolmaster are generally on the same plane of economy as the building he occupies, for the average amount that he receives in a year is only $217, or but little over a third as much as his more fortunate city brother receives. The word "brother" in this connection is somewhat out of place, for only 7.7 per cent. of the city teachers are men; the proportion for the country is 38 per cent. Notwithstanding the difference in the annual salary of teachers, it costs nearly as much per day for the tuition of the country child as for the city child, the difference being about 2 cents. This is due, of course, to the greater number of pupils to a teacher in the city.

Digitized by Google

In regard to expenses other than for teaching, the per diem cost is relatively much greater in the urban schools. When the patrons of the school bring the wood, and the teachers make the fires and sweep the floors, the expense for fuel and janitor service cuts very little figure; and when the excessive ventilation through the cracks between the logs is a source of discomfort, the cost of rotary blowers and fresh-air chambers naturally does not cause any concern. Just such primitive conditions as these still prevail in many districts, and even where the accommodations are of the best that can be expected in a country school the contingent expenses are very low. Then when new houses are required the expense for them per pupil is only about one-fourth as much as it would be in the city. So that while the cities must spend 6.8 cents per day for each pupil for purposes other than direct instruction, the rural districts need to spend only 3.6 cents, or slightly over half as much.

Having compared the average city school with the average country school, it may be well to add to the comparison some of the figures for the city of New York, not only the greatest city in the country in population, but that in which the typical conditions of cities in regard to expense of living and value of real estate exist in the most pronounced form. There the daily expense for each pupil attending is 24.4 cents, of which 10.9 cents are for instruction. The school property, which is still insufficient, is nevertheless worth $129 per pupil, and the supervisors and teachers receive an average of $825 a year. In Chicago this average is even higher, reaching $844. In both New York and Chicago the average pay of teachers will soon show a considerable increase over even these figures, as the result of recent legislation.

Comparison of city and country schools.

	Average of all city schools.	Average of all country and village schools.	Schools of New York City.
Ratio of average attendance to total enrollment.....per cent..	74.8	66.2	71.2
Average length of school term .....days..	189.6	125.3	195.7
Average number of days' attendance of each pupil enrolled.....	141.8	83.0	139.4
Average number of pupils in attendance to each teacher.....	36.3	22.5	42.3
Proportion of men in the teaching force .....per cent..	7.7	38.0	5.1
Average number of pupils to a building	312	48	828
Value of school property per capita of pupils in attendance.....	$101.78	$27.33	$129.34
Average value of a school building, with its site and furniture	$31,748	$872	$107,104
Average cost of tuition per day for one pupil.....cents..	0.66	7.69	10.88
Average daily expenditure per pupil for all purposes.....do....	16.47	11.29	24.37
Average salary of teachers and supervisors.....	$629	$217	$825

Proportion of the total population of the United States who inhabit cities of over 8,000 inhabitants, 31.6 per cent.

Proportion of the following items for the cities to similar items for the entire United States:

	Per cent.
Public school enrollment	25.3
Average daily attendance	27.6
Whole amount of instruction given	36.6
Number of male teachers	4.6
Whole number of teachers	19.1
Number of buildings	3.8
Value of school property	58.7
Expenditure for tuition	42.1
Total expenditure	45.7

That is to say, while 31.6 per cent of the population live in cities of over 8,000 inhabitants, only 25.3 per cent of the public school enrollment is found in them. 27.6 per cent of the average attendance, etc.

DISTRIBUTION OF PUPILS IN THE SEVERAL GRADES.

The proportion of pupils in the several stages of advancement in the course of study has an important bearing on many questions in school administration. On the material side, the preparation of accommodations and facilities for instruction is largely influenced by the number in the different grades; but beyond this, many deeper considerations relating to course of study and plans with a view to holding pupils in school as long as possible must be based upon a knowledge of how many and what proportion of children are already in the various degrees of advancement. Following are two tables showing these facts for 24 typical cities.[1]

The existing conditions of life do not permit us to expect as great a number of children in school or out of school at the age of 17 as at the age of 6,[2] the highest and the lowest ages of the children for whom the ordinary course of study is designed. According to the best data available,[3] the proportion of the number of each age to the whole number from 6 to 17, inclusive, in the United States is as follows:

	Per cent.		Per cent.
6 years	9.4	13 years	8.0
7 years	9.2	14 years	7.9
8 years	8.9	15 years	7.8
9 years	8.6	16 years	7.8
10 years	8.4	17 years	7.7
11 years	8.2		
12 years	8.1	Total	100.0

In contrast to the small differences in these percentages, the rapid falling off in the upper grades of the schools, as shown by the tables, stands forth in a strong light. The steady decrease in the actual number of children is relatively so small that mortality may be eliminated in considering the causes of the falling off in school attendance. Those causes must be sought elsewhere.

To make an average showing the mean rate of decrease from class to class for all the cities is an unsatisfactory undertaking because of the differences in the length of the course. But if we take only cities having at least 8 years in the elementary course and 4 in the high school, and omitting kindergartens, ninth grammar grades, and normal schools, we have the following totals and percentages for 21 cities:

	Number of pupils.	Per cent of total number.
First year's work	211,070	22.9
Second year's work	151,330	16.4
Third year's work	136,412	14.8
Fourth year's work	114,837	12.5
Fifth year's work	94,854	10.3
Sixth year's work	73,634	8.0
Seventh year's work	53,693	5.8
Eighth year's work	38,943	4.2
Total of 8 elementary grades	874,773	94.9
High schools (4 grades)	47,251	5.1
Total	922,024	100.0

[1] Pages 2346 and 2347.

[2] In the Education Report for 1893–94, pp. 30 and 31, were a series of tables showing for 10 cities the number of children of each year of age in the city and the number and proportion of them in school. An examination of those tables will be interesting in this connection.

[3] See Education Report for 1891–92, p. 37.

a Approximately.

b The number of pupils in the several grades is not reported; the table following shows the percentages as given in the printed reports.

c 58 in preparatory class of Polytechnic Institute and 76 in fifth year in City College.

d 2,152 in ungraded classes in grammar schools.

e 217 "out of course" in Latin school

f 720 in "4-year grammar course," 363 being in A class, 178 in B, 130 in C, and 49 in D.

g 51 in fifth year high school.

h 52 in fifth and 13 in sixth year high school.

i 226 in colored high school.

j 81 special students in high school.

TABLE 6.—*Comparative statistics of cities containing over 8,000 inhabitants, summarized by States, etc.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats for each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

TABLE 7.—*Summarized statistics of schools in cities of over 8,000 inhabitants from 1890–91 to 1897–98, inclusive.*

Cities of—	Number of city school systems.	Enrollment in public day schools.	Average daily attendance.	Aggregate number of days' attendance of all pupils.	Number of supervising officers.	Number of teachers.			Number of school buildings.	Number of seats or sittings for study.	Value of public property used for school purposes.	Expenditure for supervision and teaching.	Expenditure for all purposes.	Enrollment in private and parochial schools (largely estimated).

TABLE 8.—*Comparative statistics of city school systems from 1891-92 to 1897-98, inclusive.*

Cities of—	Ratio of private school enrollment to enrollment in all schools, public and private.	Ratio of average attendance to enrollment (public schools).	Average number of days' attendance of each pupil enrolled.	Average length of school term.	Average number of pupils in attendance to each teacher.	Average number of teachers to each supervising officer.	Average number of seats for each 100 pupils in attendance.	Average number of seats to a building.	Value of school property per capita of pupils in average attendance.	Cost of teaching and supervision per capita of pupils in average attendance.	Total cost of schools per capita of pupils in average attendance.	Average cost per day of tuition for one pupil.	Average daily expenditure per pupil for all purposes.

TABLE 9.—*Statistics of population and school enrollment and attendance in cities of over 8,000 inhabitants, 1897–98.*

	City.	Population in 1897 (estimated).	School population.		Pupils in private and parochial schools (largely estimated).	Different pupils enrolled in public day schools.			Average daily attendance in public day schools.	Number of days the public schools were actually in session.	Aggregate number of days' attendance of all pupils in public day schools.
			School census age.	Children of school census age.		Male.	Female.	Total.

TABLE 14.—*School statistics of cities and villages containing between 4,000 and 8,000 inhabitants.*

	City.	Population in 1898 (estimated).	School population.		Pupils in private and parochial schools.	Different pupils enrolled in public day schools.			Number of days the public schools were actually in session.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Supervising officers.	Regular teachers.			Buildings used for school purposes.	Seats or sittings for study in all public schools.	Value of public property used for school purposes.	Salaries of teachers and supervising officers.	Total expenditure.
			School-census age.	Children of school-census age.		Male.	Female.	Total.					Male.	Female.	Total.

TABLE 14.—*School statistics of cities and villages containing between 4,000 and 8,000 inhabitants*—Continued.

	City.	Population in 1898 (estimated).	School population.		Pupils in private and parochial schools.	Different pupils enrolled in public day schools.			Number of days the public schools were actually in session.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Supervising officers.	Regular teachers.			Buildings used for school purposes.	Seats or sittings for study in all public schools.	Value of public property used for school purposes.	Salaries of teachers and supervising officers.	Total expenditure.
			School-census age.	Children of school-census age.		Male.	Female.	Total.					Male.	Female.	Total.					
	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

TABLE 14.—*School statistics of cities and villages containing between 4,000 and 8,000 inhabitants*—Continued.

	City.	Population in 1898 (estimated).	School population.		Pupils in private and parochial schools.	Different pupils enrolled in public day schools.			Number of days the public schools were actually in session.	Aggregate number of days' attendance of all pupils.	Average daily attendance.	Supervising officers.	Regular teachers.			Buildings used for school purposes.	Seats or sittings for study in all public schools.	Value of public property used for school purposes.	Salaries of teachers and supervising officers.	Total expenditure.
			School-census age.	Children of school-census age.		Male.	Female.	Total.					Male.	Female.	Total.

CHAPTER XLVIII.

MANUAL AND INDUSTRIAL TRAINING.

References to recent Reports of the United States Commissioner of Education, in which this subject has been treated or statistics published: Annual Report for 1888–89, pages 411–428, 1362–1367; 1889–90, pages 1148, 1209–1212, 1351–1356; 1891–92, page 1197; 1892–93, pages 186–188, 569–575; 1893–94, pages 877–949, 2093–2169; 1894–95, page 2170; 1895–96, pages 969–992, 1001–1152, 1321–1329, 1510–1521 (column 8); 1896–97, pages 193–197, 699–703, 2211–2222 (column 8), 2279–2294.

For the school year 1897–98 there were 114 manual or industrial training schools reporting to this office. This was an increase of 15 over the preceding year. Of the 114 schools, 24 were industrial schools for Indian children.

In Table 3 the statistics of the two classes of schools are summarized. In the 114 schools there were employed 945 teachers, 507 men and 438 women. There were 30,683 pupils receiving manual and industrial training, 19,152 boys and 11,531 girls.

The total expenditure for manual and industrial training by 86 of the 114 schools was $655,247. Of this amount $440,572 was paid teachers, $93,058 for materials, $36,508 for tools and repairs, and $85,109 for incidentals and for items not classified.

Table 4 gives the statistics in detail of the 90 manual and industrial training schools other than Indian schools. In these 90 schools there were employed 673 teachers, 384 men and 289 women. In the same schools there were 25,893 pupils, 16,449 boys and 9,446 girls.

The detailed statistics of the 24 Indian schools will be found in Table 5. There were 272 teachers employed in these schools, 123 men and 149 women. There were 4,790 pupils, 2,705 boys and 2,085 girls.

In Table 6 are shown the branches of manual training or the trades taught and the number of pupils in each branch, so far as reported by the individual schools mentioned in Tables 4 and 5.

No attempt was made to ascertain the number of pupils receiving manual or industrial training in 1897–98 in institutions which are not distinctively manual or industrial training schools. This was done in 1893–94, and the statistics were printed in the Report of this office for that year, pages 2093 to 2169.

For a number of years the returns from city systems of public schools have shown in what grades manual training has been given if taught at all. The following table shows that in 1890 there were 37 cities of 8,000 population and over in whose public schools manual training other than drawing was taught; in 1894 there were 93 cities; in 1896 there were 121 cities, and in 1898 there were 146 cities.

CHAPTER XLIX.

COMMERCIAL EDUCATION IN THE UNITED STATES.

Commercial or business colleges, so called, had their beginning in the United States more than fifty years ago. At least one institution of this class now in existence was established in 1840. For many years the branches taught in these business schools were substantially limited to bookkeeping, arithmetic in which prominence was given to percentage and commercial calculations, penmanship, and business forms. Later stenography and typewriting were added. For twenty years or more these private schools made but slow progress, partly because the training offered in these branches was not superior to that which could be obtained by their study in many of the colleges and private academies.

In 1870 this Bureau received reports from 26 business colleges, although there must have been a larger number then in existence. These 26 schools had 5,824 students. In 1880 the number of schools reporting had increased to 162 and the number of students to 27,146.

The demand for stenographers and typewriters caused the rapid growth in the attendance upon these schools. Amanuensis courses were offered in nearly all of them, and students obtained diplomas or certificates of graduation in from two to six months in some of them. Very few of these schools had courses of study extending over more than one year.

In 1890 the number of business schools reporting to this office was 263, and the number of students 78,920. The highwater mark was reached in 1894, when 518 of these schools reported to this office, with an enrollment of 115,748 students. Since that time there has been a steady decline in the number of schools and a rapid decrease in the number of students. For the last year (1898) there were only 337 commercial or business schools reporting to this office, and the number of students was only 70,950. This decrease is attributed partly to the business depression of the past few years and partly to the fact that so many public high schools, as well as many private colleges and academics, have established commercial courses in many respects superior to those offered by a majority of the business colleges.

HIGHER COMMERCIAL EDUCATION.

It has been long admitted among leading business men that those preparing for business careers should have the opportunity to acquire a commercial education higher and broader than that given by even the best of the so-called business colleges. About ten years ago the American Bankers' Association began to direct the attention of educators and the public to the need of a more adequate professional training for young men preparing for business life. A committee was appointed to find out what was being done in this direction in the institutions for higher education in the United States. It was found that the Wharton School of Finance and Economy of the University of Pennsylvania was the only institution offering a course of study of a grade comparable with the regular collegiate course, and specializing those subjects most important to thorough training for business and citizenship. At the request of this committee Dr. Edmund J. James, then professor in the Wharton School, gave an exposition of the aims and methods of this school in a

Digitized by Google

valuable paper read before the association at Saratoga in 1890, in which he also discussed the situation of business education in general in the United States. The association adopted resolutions recommending the organization of departments similar to the Wharton School in other universities and colleges. Professor James was invited to visit the leading educational centers of Europe, examine their best commercial schools, and present a report upon the subject. Professor James presented his report to the American Bankers' Association in 1893. It was printed by the association and was greeted by educators and business men as the most valuable contribution in aid of higher commercial education yet made in this country. The report was reprinted in the 1895-96 Report of the United States Commissioner of Education.[1]

The agitation begun by the American Bankers' Association has resulted in the establishment of commercial departments in at least two universities (the University of California and the University of Chicago), the improvement of business courses in a number of colleges, and the organization of such courses in other colleges and in many public and private high schools and academies. The accompanying tables from 1 to 9 exhibit the statistics of commercial education in the United States for the year ending June, 1898.

IN UNIVERSITIES AND COLLEGES.

Table 1 shows that 172 universities and colleges had 5,869 students in commercial or business courses. The names of the institutions appear in Table 5. With a few exceptions these "commercial courses" include little more than bookkeeping, commercial arithmetic, commercial geography, commercial law, stenography, and typewriting, in connection with an English course of study covering about two years.

THE WHARTON SCHOOL.

The first institution in the United States to offer a thorough professional education to young men contemplating business careers was the Wharton School of Finance and Economy of the University of Pennsylvania, already mentioned. This school was founded in 1881 by Mr. Joseph Wharton, a wealthy citizen of Philadelphia, whose first gift to the school was $100,000. His desire was that the school should offer facilities for obtaining, (1) "An adequate education in the principles underlying successful civil government," (2) "A training suitable for those who intend to engage in business, or to undertake the management of property."

The course in finance and economy constructed upon the plan suggested by the founder extends over four years and is one of the regular college courses, leading to the degree of Bachelor of Science in Economics. In 1897-98 there were 87 students in this school.

The course of study for the four years is as follows:

Freshman class.—Composition, algebra, solid geometry, trigonometry, general chemistry, German, accounting, physical and economic geography, practical economic problems, economic literature, legislative and executive documents.

Sophomore class.—Modern novelists, history of English literature, German, business law, money and banking, business practice, American history, Roman history, theory and geography of commerce, American constitutional law, European constitutional law, legislative procedure and organization, political economy, public speaking (optional).

Junior class.—Comparative politics, modern legislative problems, public administration, business practice and banking, economic history, sociology, sociological field work, American history, English constitutional history, logic, ethics.

Senior class.—History of law and legal concepts, local and municipal institutions, political economy, statistics, public finance, transportation, advanced sociology, history of the Renaissance and the Reformation.

[1] Vol. 1, Chapt. XV, pp. 721-837, Education Report, 1895-96.

Digitized by Google

UNIVERSITY OF CALIFORNIA.

The board of regents of the University of California on January 15, 1898, decided to establish a college of commerce in that institution. The college was formally opened at the beginning of the fall term of the same year. The four years' course is parallel with the curricula of the colleges of general culture, about one-half of the subjects studied being prescribed in these colleges. The subjects making up the other half of the fundamental course are selected from a broad field covering philosophical, legal, political, historical, economic, geographical, technological, and mathematical studies. It is stated that "this college is intended to afford an opportunity for the scientific study of commerce in all its relations and for the higher education of business men and of the higher officers of the civil service." Besides the fundamental courses, the new college offers a large number of special courses, and the student may arrange his studies with special reference to his future work, the different subjects being more or less closely related to commerce. The general scope of the work proposed for the college of commerce is shown in the following list of subjects printed in the first announcement published:

Philosophical studies.—History and principles of commercial ethics.

Legal studies.—Commercial law of different nations; public international law, and the duties of diplomatic and consular officers; private international law; admiralty and maritime law; Roman law; comparative jurisprudence; judicial procedure in different countries; law of private corporations, and other special courses.

Political studies.—Constitutional law of different nations; public law and administration; municipal government; general political theory; legislative control of industry and commerce.

Historical studies.—The general political and constitutional history of the leading nations, especially during the nineteenth century; diplomatic history. Economic history—that is, the history of industry and commerce—is of such importance as to constitute a separate group. (See below.)

Economic studies.—General theory and analysis; political economy, general principles and theory; labor and wages; theory and practice of exchange, foreign and domestic; theory of value; markets, their organization and the determination of prices; currency in all countries; banking in all countries; economic features of transportation by land and water (a subject in which many special courses should be offered); industrial and commercial organization; corporations and corporation finance; communication—postal service, telegraph and telephone, newspapers and advertising; insurance—fire, marine, life, etc.; consumption, and the principles of demand and storage; commercial usages of different countries; public finance—government expenditures, revenues, including taxation, customs duties, etc., public debts, and fiscal administration; statistics, mathematical and practical; history, theory and methods—the "movement of population," actuaries' statistics, theory of prices, etc.

Studies in economic history.—The history of commerce in all countries and at every age (upon this general subject as large a number of special courses as possible should be offered); the history of the institution of private property; the history of land tenures; the history of agriculture; the history of industry from the earliest times; the history of manufactures; the history of labor and of labor organization, and other special courses.

Linguistic studies.—The languages and literatures of the nations with which we have commercial relations—American, European, and Oriental.

Geographical studies.—Political geography; geodesy; physical geography; commercial geography; biological geography, including botany, zoology, anthropology, etc.; meteorology and climatology; oceanography—coasts, harbors, etc.; navigation and nautical astronomy; geology.

Technological studies concerning the materials of commerce.—Botany—general plant morphology and economic botany; forestry and wild-plant products, also wild-animal products; agriculture—culivated plant products of all descriptions, including field, orchard, and vineyard products; animal products, such as meats, dairy products, wool, etc., and including agricultural practice, irrigation, etc.; agricultural manufactures, such as sugar, starch, textiles, oils, brewing, tanning, drying, and canning, etc.; fisheries, and all the products of the sea; mining, and mineral products, and building materials; chemical technology, and chemical products, acids, alkalis, etc.; manufactured products; decorative and industrial art.

Technological studies concerning transportation.—Civil engineering and mechanical engineering, construction of roads, bridges, canals, irrigation works, etc., motors and motive power, etc., railroad economics, etc.

Mathematical studies.—Courses covering all the mathematical principles involved in the above studies.

Digitized by Google

UNIVERSITY OF CHICAGO.

The next great institution in this country to recognize the importance of the higher business training and to make liberal provision for it is the University of Chicago. The College of Commerce and Politics opened its doors at the beginning of the last summer quarter. President Harper, in his twenty-fifth quarterly statement, presented on October 1, 1898, says:

It is with a feeling of great satisfaction that I may announce the inauguration during the past quarter of the College of Commerce and Politics. It will be remembered that the undergraduate work of the university was organized in three colleges, the College of Arts, the College of Literature, and the College of Science, each college taking its name from the group of subjects upon which special emphasis was laid. When it was first proposed by Head Professor Laughlin that the university should organize work in a line of subjects dealing more closely with the great fields of commerce and politics, it was still a question whether that work should take the form of a professional school or be organized as regular college work. After long debate in the faculties and senate of the university it was decided that the work should be organized as a college and administered as such. Herein lies the great difference between the work as thus presented in the University of Chicago and certain work of perhaps a similar character undertaken elsewhere.

A strong desire has already been indicated in the minds of many to do their college work along the lines of the departments more prominently represented in this college. The interest has been as great as was expected, and the results thus far justify the step taken.

The required course in commerce includes, besides the general branches usually taught in higher education, the following topics specially relating to commerce: Railway transportation, comparative railway legislation, financial history of the United States, money and practical economics, banking, processes of leading industries, tariff history of the United States, insurance. The courses in detail are given in a circular of information published by the university, "The College of Commerce and Politics of the University of Chicago," pages 5 to 9.

IN PUBLIC COLLEGES.

Of the 172 colleges shown in Table 5 all are private institutions except 11. Of the 11, two are supported wholly by the States in which they are located, the remaining 9 being agricultural and mechanical colleges supported by funds from the General Government, supplemented in some instances by State funds. The 11 public institutions offering commercial courses or providing for certain commercial studies are mentioned below.

University of the State of Missouri.—The 1897-98 catalogue states that instruction is given in correspondence, making out bills and statements, writing receipts, checks, notes, and drafts, together with the use of various account books. An important part of the work is a thorough drill in journalizing, concluding with the writing of entire sets of books, that the student may make a practical application of his previous work in the various business forms. This work is required in both semesters of the first year. A full course in stenography is provided for those students who wish to carry on this study while prosecuting regular work in the university.

West Virginia University.—In 1895 the commercial school of this university was established. It provides a two-year commercial course. To be admitted to this school the applicant must be proficient in arithmetic, English, spelling, geography, and United States history. Certificates are granted to students who complete the course and pass the required examinations. The course of study is arranged as follows:

First year.—English grammar, physical geography, general history, penmanship, typewriting, arithmetic, United States history, bookkeeping, algebra, civil government, business practice.

Second year.—History and principles of commerce, commercial arithmetic, shorthand, commercial law, principles of economics, court reporting, rhetoric, commercial law, commercial geography.

Colorado State Agricultural College.—The State board of agriculture in December, 1895, instructed the college faculty to "so arrange the curriculum as to make ade-

Digitized by Google

quate provision for a distinct department to be known as the commercial course of the State Agricultural College." In accordance with this action the following course of study, covering two years, is offered:

First year.—General history, plane geometry, bookkeeping, commercial arithmetic and rapid calculation, spelling, penmanship, rhetoric and rhetorical analysis, solid geometry, business practice and banking, business correspondence.

Second year.—Literature, Constitution of the United States, stenography, business geography, logic, sociology, business law, political economy, typewriting and office practice.

University of South Dakota.—The College of Business is one of the departments of the institution. The course of study extends over one academic year and "includes bookkeeping in all its forms, both single and double entry, with instruction in the retail and jobbing trade, importing, commission, banking, and other classes of business; penmanship, business arithmetic, commercial law, embracing instruction in the principles of contracts, agencies, partnerships, negotiable paper, and other legal phases of business; commercial correspondence, shorthand, typewriting, and office practice."

South Dakota Agricultural College.—One of the departments of this institution is known as the department of commercial science. The commercial studies may be taken in connection with any of the college courses. If taken alone these special studies would occupy about one year. These studies include shorthand, penmanship, commercial law, bookkeeping, business practice, correspondence, typewriting, and commercial arithmetic.

Florida Agricultural College.—The business course in this institution may be completed in one year. It includes bookkeeping, business correspondence, commercial arithmetic, commercial law, English, and penmanship. Another course in stenography, typewriting, and telegraphy covers about a year.

Nevada State University.—The University Commercial School belonging to the department of secondary education of the State University offers a course of study extending over three years and including arithmetic, algebra, English grammar, English history, literature, penmanship, United States history, bookkeeping, stenography, plane geometry, typewriting, rhetoric, civil government, and commercial law.

Montana State College of Agriculture and Mechanic Arts.—The business department of this college offers two courses in bookkeeping and one in stenography and typewriting, occupying one year each when taken in connection with other studies.

University of Arizona.—One of the special courses in this institution is the commercial course of one year. It includes business arithmetic, bookkeeping, stenography, typewriting, penmanship, and commercial law.

New Mexico College of Agriculture and Mechanic Arts.—The business department of this institution has two parallel courses of one year each. The first course includes bookkeeping, commercial arithmetic, grammar, penmanship, spelling, commercial law. The second course includes stenography and typewriting. Spanish is also taught.

North Georgia Agricultural College.—The business course covers four years of study and is parallel with the two preparatory years and the freshman and sophomore years in the A. B. and B. S. courses. The course includes English, commercial arithmetic, United States history, Latin, algebra, geometry, trigonometry, surveying, commercial and physical geography, botany, zoology, physiology, general chemistry, physics, civil government, general history, English and American literature, political economy, bookkeeping, banking, stenography, typewriting, telegraphy.

The courses of study as outlined above for the 11 public institutions may be taken as typical of the commercial or business courses offered by a majority of the 161 private colleges mentioned in the list in Table 2.

IN SECONDARY SCHOOLS.

The number of normal schools reporting to this office for 1897-98 was 345; the number of public institutions being 167, and the number of private schools 178.

Digitized by Google

Of the total number of normal schools, 107 reported 5,721 students in business courses, as shown in Table 1. Only 19 of these schools are supported by public funds. The list is given in Table 6.

Many normal schools in this country, particularly certain State normal schools are above secondary schools in grade. It is usual to regard the normal school as occupying a place in the system between secondary and higher education. Many of these schools offer four-year courses of study, which would be parallel to the last two years of the high school and the first two years of the college. For present purposes the normal schools may be classified as secondary, the commercial courses offered by them falling below the college grade.

Of the nearly 2,000 private high schools and academies reporting to this office for 1897-98, there were 653 reporting 9,740 students in commercial and business courses, as shown in Table 2. In the 653 schools there were only 40 reporting as many as 30 students each in commercial courses. The statistics of these 40 schools are given in Table 7. References to the courses of study in a few of these schools will give a general idea of the work being done in the direction of commercial education by the private secondary schools of the United States.

Thornton Academy, Saco, Me.—This school offers a business course extending over four years, parallel with the regular courses. It includes algebra, business arithmetic, Greek and Roman history, penmanship, mediæval history, bookkeeping, geometry, physiology, English composition, business forms, French or German, physics, physical geography, botany, modern history, civil government, rhetoric, chemistry, English history, United States history, astronomy, English literature, mental science.

Calvert Hall, Baltimore, Md.—The commercial course in this school may extend over one or two years. It includes commercial correspondence, commercial arithmetic, bookkeeping, banking, phonography, typewriting, modern languages, and drawing.

Wentworth Military Academy, Lexington, Mo.—The business course in this school extends over five years parallel to the classical course. It omits Latin and modern foreign languages, substituting for them commercial arithmetic, drawing, bookkeeping, business forms and correspondence, commercial law, civil government, stenography, etc.

Pawnee City Academy, Pawnee City, Nebr.—The commercial course includes most of the studies usually taught in the first and second years of the course of secondary studies, together with bookkeeping, commercial arithmetic, and commercial law.

South Jersey Institute, Bridgeton, N. J.—The business course is arranged for one year, and includes commercial calculations, bookkeeping, business correspondence, commercial law, banking, phonography and typewriting, political economy, and business ethics.

De la Salle Institute, New York City.—The commercial department offers a three years' course of study, including rhetoric, English literature, ancient and modern history, political economy, commercial arithmetic, algebra, geometry, bookkeeping, phonography, chemistry, history of commerce, commercial law, civil government, physics, commercial geography, French, German, Spanish.

Oak Ridge Institute, Oak Ridge, N. C.—The announcement is made that in the business department is grouped all the courses taught in first-class business colleges. The courses are so arranged that the student may select a course of one, two, or three years.

Park Institute, Allegheny, Pa.—The third and last year of the general course in this school is made the commercial course. In this year are taught bookkeeping, commercial arithmetic, commercial geography, commercial law, and business practice.

Brigham Young Academy, Provo City, Utah.—A department of this institution is The Commercial College. The business course requires three years for its completion, and includes commercial arithmetic, science of accounts, English, theology, business correspondence, commercial law, civil government, algebra, geometry, political economy, constitutional history, and many elective studies.

Digitized by Google

Montpelier Seminary, Montpelier, Vt.—The course of study in the business department is completed in one year, and includes bookkeeping, business practice, commercial arithmetic, commercial geography, correspondence, penmanship, and civil government.

IN PUBLIC HIGH SCHOOLS.

There were 5,260 public high schools reporting to this office for the year 1897–98. As shown in Table 2, there were 1,018 of these schools having a total of 31,633 students in the commercial or business course of study. The business course in the greater number of these schools does not differ widely from the business course in the private secondary schools already mentioned. In many of these schools the last year of the course is devoted largely to commercial studies, while in many others such studies are distributed through the whole course of four years. Of the 1,018 public high schools mentioned, there are only 139 having 50 or more commercial students each. The names and statistics of these are given in Table 8.

In many of the larger cities leading business men are urging the establishment of commercial high schools, with courses of study extending over four years. The school authorities in certain cities have partially met this demand by organizing commercial courses in the high schools already established. This arrangement is not always satisfactory, and is generally unsatisfactory when the commercial course of two years is made to parallel the regular course of four years. In an address delivered before the Chamber of Commerce of the State of New York on commercial education, Hon. William H. Maxwell, city superintendent of schools, New York City, says that the two-year commercial course in the Brooklyn high schools should be abolished, and probably the four-year commercial courses in the Manhattan high schools recently established. He urges the establishment of two separate and distinctively commercial high schools, with four-year courses, one for Manhattan and the other for Brooklyn.

Since 1892 Hon. Edward Brooks, superintendent of public schools of the city of Philadelphia, has been advocating the establishment of a commercial high school for that city, or of a commercial department in the Central High School. He has been ably seconded in this movement by such strong business men as Mr. Theodore C. Search. Mr. Search made an earnest plea for a separate institution. He feared that to make it a part of another school would not secure the best results; that it would be overshadowed by the classical and other departments. He felt that as a separate institution the commercial school would have stronger teachers and better methods of instruction. On the score of economy the city council did not authorize the expenditure for a separate school; but a department of commerce is established as part of the Central High School, with an excellent course of study covering four years.

Hon. Edwin P. Seaver, superintendent of public schools, city of Boston, writes that an impetus has been given to commercial studies in the public high schools. For many years bookkeeping has been taught, and very thoroughly taught, in the English high school for boys and to a less extent in the girls' high school. Certain commercial branches have been taught in the evening high school for upward of twenty years. Last year the so-called commercial branches were introduced into the day high schools and offered to all boys and girls who desired to take them. Special instructors in bookkeeping, phonography, and typewriting were employed. The result is that many high-school students are now pursuing these studies.

The educational commission of the city of Chicago, which was appointed a year ago by Mayor Harrison, and which has just submitted its report, recommends "that a commercial high school, with a full, liberal four years' course of study, be established in some central location." The commission discusses at some length the course of study and says: "If the commercial school is to accomplish the ends we have in mind, the curriculum must be not less broad than that of our public high schools. We feel strongly that a short and so-called 'practical' course would be predestined to failure and would be an injury rather than a help to what will prove in the near

Digitized by Google

future one of the most important developments in secondary education." The commission concludes this recommendation as follows:

Your commission is so fully persuaded of the importance of this action that we recommend that the first expansion of the school system shall take this form, and that at the earliest possible date a public high school be established with a course of study extending through at least four years, planned to afford a liberal training and at the same time to prepare its pupils for the various kinds of business activity and to qualify them for the highest positions in the commercial world. (See pp. 98, 107, 111, 205–217 of the report mentioned.)

Business High School, Washington, D. C.—For years the capital city has enjoyed the distinction of having the only business high school in the United States connected with a city system of schools and wholly supported by public funds. The Business High School was established in 1890, although the Central High School had had a business department since 1882. The report of the Business High School for 1890–91 shows that 310 students were enrolled the first year, 160 males and 150 females, and that the school had 9 teachers. The school has had a steady growth to the present time. The report for 1897–98 shows an enrollment of 601. There were 193 boys and 197 girls in the first year and 76 boys and 93 girls in the second year in the school in October, 1897. There were 89 graduates, the largest number for any year since the school was established. The number of teachers employed is 20. The average age of the students entering is 16.7 years. The requirements for admission are the same as for the other high schools of the city and presuppose the completion of the eight-year course of the elementary schools. The course of study for the Business High School is as follows:

First year.—English grammar and literature, business arithmetic, bookkeeping, penmanship, shorthand, typewriting or mechanical drawing.
Second year.—English grammar and literature, bookkeeping and business practice, commercial law and commercial geography, shorthand, typewriting, advanced mechanical drawing (optional).

In the report of the board of trustees of public schools of the District of Columbia for 1897–98 the "business course problem" is discussed at some length and a provisional course of four years is recommended. Besides all the subjects in the two years' course above mentioned, the four years' course would include Latin, French, general history, commercial history, political economy, algebra, geometry, physics, chemistry, and biology. (See pp. 21, 81, 84, 117–129, of the report of the board of trustees for 1897–98.)

Boston, Mass.—The commercial course of study for the high schools of Boston, adopted by the school committee September 24, 1897, extends through two years, and is as follows:

First year.—English language and literature, ancient history, phonography, penmanship and commercial forms, commercial arithmetic, and bookkeeping, botany, drawing, music, physical training.
Second year.—English language and literature, medieval history, modern history, phonography and typewriting, elements of mercantile law, bookkeeping, commercial geography, zoology, physiology and hygiene, drawing, music, physical training.

Philadelphia, Pa.—The course of study for the department of commerce in the Central High School covers four years and is classified under seven subjects, namely, English, languages other than English, mathematics, history, science, economics and political science, business technique. The course by years is as follows:

First year.—Composition and American literature, Latin, algebra, Greek and Roman history, physical geography, botany, zoology, Philadelphia and Philadelphia interests, penmanship and business forms, drawing.
Second year.—History of English literature, Latin, German, commercial arithmetic, geometry, English history, commercial geography, bookkeeping, stenography.
Third year.—Readings from English literature, German, French (or Spanish), modern European history, physics, chemistry, political economy, office practice, stenography, observation of business methods.
Fourth year.—Reviews and thesis writing, German, French (or Spanish), modern industrial and commercial history, industrial chemistry, transportation, banking and finance, statistics, political science, ethics of business, commercial law.

Digitized by Google

Pittsburg, Pa.—The commercial department of the Central High School has a course of one year's study. It includes bookkeeping, commercial geography, composition, commercial and higher arithmetic, commercial law, penmanship, office practice, typewriting, phonography, civil government, physiology, civics.

Albany, N. Y.—The High School has four four-year courses. In the technical course bookkeeping, stenography, and typewriting are prescribed. Other studies in this course have direct bearing upon education for business life.

Buffalo, N. Y.—There are six courses of study for high-school students, and in addition a number of optional studies, including bookkeeping and other commercial studies. There is no prescribed commercial course, but a good business training course may be selected from the prescribed and optional studies.

New Haven, Conn.—The Hillhouse High School has a commercial course covering three years of study, including algebra, German, bookkeeping, commercial arithmetic, penmanship, English and English and American literature, actual business methods, stenography, and typewriting.

Detroit, Mich.—The commercial course of the high schools of Detroit has been extended to cover four years, and the superintendent of schools urges that one of the school buildings be fitted up exclusively for a commercial high school.

Grand Rapids, Mich.—In the Central High School as many as ten courses of study are offered. The first of these is the English-commercial course, extending through four years. The announcement says: "This course is planned for pupils preparing specifically for business life, and does not prepare for college. It offers ample and thorough work in bookkeeping, commercial law, etc., besides a complete course in high-school mathematics and history, and instruction in the correct use of the English language. It will be noticed that this course offers in the eleventh and twelfth grades an option of two years of a foreign language."

St. Paul, Minn.—In the Mechanic Arts High School of St. Paul provision is made in the four-year general course for commercial studies; commercial arithmetic, bookkeeping, civil government, and commercial law being specified. The course includes the mathematics, English grammar and literature, and history of the regular high school course, and prescribes one foreign language for three years, either Latin, German, or French.

Richmond, Va.—The business course in the Richmond High School covers two years, the following studies being prescribed:

First year.—Arithmetic, algebra, general history, physical geography, English grammar, English composition, penmanship.

Second year.—Commercial arithmetic, bookkeeping, business forms, physics, physiology, algebra, civil government, English composition, commercial law, phonography and typewriting.

San Francisco, Cal.—One of the courses offered in the Polytechnic High School is the commercial course. It includes business arithmetic, bookkeeping, English, penmanship, stenography, typewriting, and the election of other branches of study.

THE COST OF HIGH SCHOOLS.

It is difficult to obtain an accurate estimate of the cost of commercial education in the public high schools, the separate cost of the high schools themselves not being reported except in a few instances. Where these schools belong to city systems of public schools the cost is included in the general financial statement of the system. It may be stated in general that the cost per pupil is from 50 to 100 per cent greater in the high school than in the elementary schools. In the city of Washington the cost per pupil in the first four grades of the elementary schools, estimated on average enrollment, was $12.42 for 1897–98; in the next four grades the estimated cost per pupil upon the same basis was $20.56, while the cost of each high school pupil, estimated on average enrollment, was $42.89. This figure may be taken as the cost per pupil in the Washington Business High School.

Of the 139 public high schools mentioned in the list in Table 8 only 37 report their total expenditure. The names of these schools, with the number of secondary

Digitized by Google

students and the estimated cost of each student enrolled, are given in the following table:

Place.	Name.	Number of pupils.	Expense per pupil.
Marianna, Ark	High School	170	$29.41
Benicia, Cal	do	33	62.78
Los Angeles, Cal	do	1,370	29.92
Stockton, Cal	do	267	55.03

Total		24,669	38.90

From the above table it will be seen that the 37 public high schools had an aggregate enrollment of 24,669 secondary students, and that the average cost per student enrolled was $38.90. All these schools have students in commercial courses and it may be assumed that their average cost is about the same as the general average for all high school students.

COMMERCIAL AND BUSINESS COLLEGES.

The number of so-called commercial and business colleges reporting to this office for 1897-98 was 337. These schools have 1,787 teachers and 70,950 students, as shown in Table 3. The number of students in the commercial course was 32,761; in the amanuensis course, 19,298; in the English course, 12,735, and in the course in telegraphy, 1,113, as shown in Table 4. In the commercial course there were 10,041 graduates and in the amanuensis course 8,372 graduates. The growth of these business schools may be illustrated by the following table, which shows the number of such institutions reporting to this office for the years mentioned, together with the number of teachers and the number of students for each year:

Year.	Schools.	Teachers.	Students.
1870	26	154	5,824
1875	128	577	25,802
1880	162	619	27,146
1885	232	1,099	43,706
1890	263	1,593	78,920
1895	462	2,201	96,135
1898	337	1,787	70,950

The names of business schools reporting in 1897-98 are printed in Table 9 and the statistics of each school given in detail.

The courses of study in five business colleges, which may be taken as representatives of the best schools in the list of 337, are given below:

Peirce School, Philadelphia, Pa.—This school, which was founded by its present principal, Thomas May Peirce, A. M., Ph. D., is now in its thirty-fourth year. The announcement for the year 1898–99 says:

Peirce School offers three full courses: Business, shorthand and typewriting, and English.

The business course includes bookkeeping, penmanship, commercial calculations and rapid reckoning, business correspondence, commercial law, commercial geography, mercantile forms and customs, banking, finance, economics, business ethics, and civics.

The shorthand course includes shorthand, typewriting, and English, which comprises a thorough review in spelling, defining and use of words, grammar and punctuation, synonyms, etymology, and business correspondence. Business forms and customs are taught, and lectures are given upon civics and business ethics.

The English course gives a practical training in arithmetic, spelling, business correspondence, grammar and composition, geography, penmanship, etc. This is an especially useful course for those who wish to review the common branches to prepare for civil-service examinations or for entrance to technical schools and colleges.

Packard's Business College, New York City.—This school was started in 1858. Students who are thoroughly prepared to enter a good high school may complete the commercial course in this business college in about one year. The course of study includes bookkeeping, penmanship, commercial arithmetic, commercial law, practical grammar, including correspondence and a critical study of English, shorthand, typewriting, business methods and practice, political economy, political history, civil government, commercial geography, parliamentary proceedings.

Duff's College, Pittsburg, Pa.—This school was established in 1840 as Duff's Mercantile College, and was conducted for nearly thirty years by its founder, Peter Duff. Since his death the school has been managed by his sons. Fifty dollars pays for a scholarship, unlimited as to time, for completing the full commercial course. The course of study is announced as follows: "Theory and practice of single and double entry, mercantile, private, and national banking, railroad, manufacturing, insurance, commercial calculations and arithmetical training, rapid practical penmanship, business forms, letter writing, orthography and language lessons, lectures on mercantile law, commercial ethics, political economy."

Bartlett Commercial College, Cincinnati, Ohio.—The full course in this school may be completed in one year by a student who enters with a good common-school education. The course includes bookkeeping, commercial arithmetic, business penmanship, mercantile forms and customs, correspondence, shorthand and typewriting.

Metropolitan Business College, Chicago, Ill.—This school has three departments—the commercial, the shorthand and typewriting, and the English training departments. The last named is designed for students who are deficient in any of the common-school branches. The commercial course is announced as follows: "Bookkeeping, commercial arithmetic, penmanship, business correspondence, commercial law, business forms and methods, detecting counterfeit money, banking, insurance, commission, real estate, transportation, brokerage, wholesale, retail, importing, and jobbing.

THE STATISTICAL TABLES.

The statistical tables and summaries which follow have been referred to in the preceding paragraphs. The summaries show the number of students in commercial courses in each of the five classes of institutions in each State of the United States. The totals are as follows for the year 1897–98:

In universities and colleges	5,869
In normal schools	5,721
In private high schools and academies	9,740
In public high schools	31,633
In commercial and business colleges	70,950
Total for United States	123,913

CHAPTER L.

EDUCATION OF THE COLORED RACE.

References to preceding Reports of the United States Bureau of Education in which this subject has been treated: In Annual Reports—1870, pp. 61, 337-339; 1871, pp. 6, 7, 61-70; 1872, pp. xvii, xviii; 1873, p. lxvi; 1875, p. xxiii; 1876, p. xvi; 1877, pp. xxxiii-xxxviii; 1878, pp. xxviii-xxxiv; 1879, pp. xxxix-xlv; 1880, p. lviii; 1881, p. lxxxii; 1882-83, pp. xlviii-lvi, 85; 1883-84, p. liv; 1884-85, p. lxvii; 1885-86, pp. 596, 650-656; 1886-87, pp. 790, 874-891; 1887-88, pp. 20, 21, 167, 169, 988-998; 1888-89, pp. 768, 1412-1439; 1889-90, pp. 620, 621, 624, 634, 1073-1102, 1388-1392, 1395-1485; 1890-91, pp. 620, 624, 792, 808, 915, 961-980, 1469; 1891-92, pp. 8, 686, 688, 713, 861-867, 1002, 1234-1237; 1892-93, pp. 15, 442, 1551-1572, 1976; 1893-94, pp. 1019-1061; 1894-95, pp. 1331-1424; 1895-96, pp. 2081-2115; 1896-97, pp. 2295-2333; also in Circulars of Information—No. 3, 1883, p. 63; No. 2, 1886, pp. 123-133; No. 3, 1888, p. 122; No. 5, 1888, pp. 53, 54, 59, 60, 80-86; No. 1, 1892, p. 71. Special Report on District of Columbia for 1869, pp. 193, 300, 301-400. Special report, New Orleans Exposition, 1884-85, pp. 468-470, 775-781.

In the sixteen former slave States and the District of Columbia, generally spoken of collectively as "the South," the negro children are educated in public schools separate from the schools for white children. The total enrollment in the public schools of the South for the year 1897-98 was 5,620,553, the number of white children being 4,113,811 and the number of colored children 1,506,742. Table 1 of this chapter shows that the estimated number of children in the Southern States and the District of Columbia between 5 and 18 years of age was 8,673,550. Of this number 5,828,980, or 67.35 per cent, were white children and 2,844,570, or 32.65 per cent, were children of the negro race. The same table shows that 70.58 per cent of the white school population was enrolled in the schools and 52.97 per cent of the colored school population. The average daily attendance in the schools of the South was 3,576,642, the number in the white schools being 2,659,809, or 64.66 per cent of the white enrollment, and the number in the colored schools 916,833, or 60.85 per cent of the colored enrollment.

The total expenditure for the public schools of the South for the year 1897-98 was $31,217,479, as shown in Table 2. Separate accounts of the expenditures for the colored schools are not kept by the State authorities, but it is estimated that the cost of public schools for the colored children was about $6,575,000. Since 1870 the amount of money expended for public schools in the South has reached $546,630,246. It is believed that nearly 20 per cent of this amount, or about $109,000,000, must have been expended for the education of the colored children. The total expenditure for each year and the aggregate for the 28 years, as well as the common-school enrollment of white and colored children for each year since 1876, are shown in Table 2.

SECONDARY AND HIGHER EDUCATION.

There are about 180 schools in the United States for the secondary and higher education of colored youth exclusively. It is very difficult to obtain detailed information concerning a number of these institutions. The presidents and principals of many of these colored schools very promptly send full statistical reports to this office every year; some send meager reports, in reluctant compliance with repeated requests for information, while a few fail to make any response whatever to inquiries from the United States Bureau of Education.

Digitized by Google

For the year 1897-98 only 161 of these institutions for the secondary and higher education of the negro reported to this office. Of this number 1 was in Illinois, 2 in Indiana, 1 in New Jersey, 2 in Ohio, and 3 in Pennsylvania, the remaining 152 being in the South. These schools are all to be found classified according to their grades in the lists of universities and colleges, normal schools, and public and private secondary schools, in other chapters of this Annual Report; but more complete statistics are given for each of these schools in detail in Tables 12 and 13, at the conclusion of this chapter, and summarized in Tables 3 to 8.

Table 3 shows that in the 161 institutions there were employed 1,808 teachers, 804 men and 1,004 women. The total enrollment in these schools was 42,328 students, 19,001 males and 23,327 females. In the collegiate grades there were 2,492 students, 1,912 males and 580 females. In the secondary grades there were 13,669 students, 5,989 males and 7,680 females. In the elementary grades there were 26,167 pupils, 11,100 males and 15,067 females.

The classification of students according to courses of study is given in Table 4 and part of Table 5. There were 1,711 students in classical courses, 1,200 in scientific courses, 9,724 in English courses, 244 in business courses, and 4,449 in normal courses.

As shown in Table 5, there were 167 graduates from collegiate courses, 859 from normal courses, and 853 from high-school courses.

Included in the total enrollment mentioned in Table 3, and mostly in the collegiate grades, are 1,285 students in professional courses, 1,105 men and 180 women. As shown in Table 6, there were 560 students and 63 graduates in theology, 116 students and 39 graduates in law, 342 students and 78 graduates in medicine, 43 students and 9 graduates in dentistry, 44 students and 11 graduates in pharmacy, and 180 students and 26 graduates in nurse training.

Of the 42,328 students in the 161 schools for the colored race, 14,400 were receiving industrial training—5,431 males and 8,969 females. It is shown in Table 7 that 1,260 of these were being trained in farm or garden work, 1,804 in carpentry, 107 in bricklaying, 94 in plastering, 130 in painting, 47 in tin or sheet-metal work, 274 in forging, 222 in machine-shop work, 219 in shoemaking, 685 in printing, 6,923 in sewing, 1,922 in cooking, and 2,414 in other industrial branches.

Table 8 shows that these colored schools received in benefactions or bequests in 1897-98 the aggregate of $399,392, an increase of $96,342 over the preceding year. These schools received from public funds $296,022, from tuition fees $197,586, from productive funds $134,010, and from sources not named $476,560. The aggregate income of these schools was $1,104,178. These schools had in their libraries 237,145 volumes, valued at $215,908. The value of grounds, buildings, furniture, and scientific apparatus was $7,987,439.

ILLITERACY OF THE NEGRO.

Tables 9, 10, and 11 are inserted in this chapter for purposes of comparison. Table 9 shows the number and per cent of all persons in the population 10 years of age and over who could not read and write in 1890, 1880, and 1870. Table 10 gives these statistics for the white population and Table 11 for the colored population.

CHAPTER LI.

SCHOOLS FOR THE DEFECTIVE CLASSES.

Schools for the blind.—The total number of schools reported was 36. The total number of instructors was 383—male, 137; female, 246: in music, 127; and in the industrial departments, 113. The total number of pupils reported was 3,744—male, 1,942; female, 1,802: in kindergarten departments, 467; in vocal music, 1,952; in instrumental music, 1,893. In the industrial department the total number of pupils was 2,131. The total number of volumes in the libraries was 89,641. The value of scientific apparatus was $83,815, and the value of grounds and buildings was $6,060,900. The total expenditure for support was $707,435.

Schools for the deaf.—The total number of schools for the deaf reporting to this Bureau is 105, with 1,100 instructors and 10,878 pupils. The 51 State public schools report 945 instructors—male, 332; female, 613; in articulation, 377; in aural development, 49; in industrial department, 260. The total number of pupils was 9,832, of which number 3,205 were taught by the combined system, 2,946 by the purely oral method, and 3,616 by the manual method; 670 were taught in the kindergartens. The number of graduates was 180. The libraries of these institutions contained 94,269 volumes. The value of the scientific apparatus was $13,845; of grounds and buildings, $11,175,933. The total expenditures for support was $2,208,704.

The private schools for the deaf reported 81 instructors—41 in articulation, 16 in aural development, and 34 in the industrial departments. The number of pupils reported was 483, of which number 249 were taught by the combined system, 138 by the purely oral method, and 78 by the manual method; 56 were taught in the kindergartens.

The public day schools for the deaf reported 74 instructors—59 in articulation, 26 in aural development, and 59 in the industrial departments. The number of pupils reported was 563, of which number 116 were taught by the combined system, 406 by the purely oral method, and 23 by the manual method. The number taught in the kindergartens was 36. The amount expended for support reported was $41,675.

Schools for the feeble-minded.—The number of schools reported to this Bureau was 29, with 259 instructors in the school departments, 180 in the industrial departments, and 610 in caring for the inmates. The total number of pupils reported was 9,232, of which number 943 were enrolled in the kindergartens and 1,749 in music.

The 19 State public schools report 213 instructors in the school departments, 135 in the industrial departments, and 556 assistants in caring for inmates. The number of inmates or pupils reported was 8,866. Of these, 815 were in kindergartens and 1,590 in music. The value of grounds and buildings was $4,922,537; the expenditures were $1,414,451.

Of the private institutions for the feeble-minded Connecticut had 1, Illinois 1, Maryland 1, Massachusetts 3, Michigan 1, and New Jersey 3, making a total of 10 schools, with 56 instructors in school departments, 45 in industrial departments, and 60 assistants in caring for inmates. There were in the schools 366 pupils, 128 of them in kindergartens and 159 in music.

CHAPTER LII.

REFORM SCHOOLS.

In the 87 reform schools represented in the Annual Report for 1897–98, there were 518 instructors and 23,501 pupils in the school departments and 18,080 pupils in the industrial departments. The total number of inmates was 25,308. The value of grounds and buildings was $18,631,147; the expenditures on buildings and grounds amounted to $569,555, and for support $3,546,767, making a total expenditure of $4,116,322. The number of assistants, not including instructors in the school departments, was 1,861. There were 19,771 white inmates and 3,267 colored inmates. There were reported 8,033 inmates of native parents and 5,771 of foreign-born parents. When admitted 2,718 could read only, and 2,370 could neither read nor write. The number committed to the institutions during the year was 12,773, and the number discharged was 12,003. When discharged from the schools all could read and write and a large number had received the equivalent of a common-school education.

The North Atlantic Division reports 35 schools, 240 instructors, 11,301 pupils in the school departments, and 8,504 in the industrial departments. The number of inmates reported was 11,595, of which number 9,754 were males and 1,841 females. The value of grounds and buildings was $9,430,916. The expenditures on grounds and buildings amounted to $139,627, for support $1,814,281, making a total expenditure of $1,953,902. The number of assistants, not including the teachers in the school departments, was 820.

The South Atlantic Division reports 12 schools, 54 instructors, 1,945 pupils in the school departments, and 1,185 in the industrial departments. Of the 1,955 inmates reported in the institutions, 1,730 were males and 225 females. The total value of grounds and buildings was $1,458,297. The amount expended for buildings and improvements was $41,916, and for support $210,891, making a total expenditure of $252,807. The number of assistants, not including teachers in the school departments, was 141.

The South Central Division reports 5 schools, 24 teachers, and 1,336 pupils in the school departments. The value of grounds and buildings was $497,000. The total amount expended was $154,285, for buildings and improvements $22,208, and for support $132,077. The total number of assistants, not including the teachers in the school departments, was 5.

The North Central Division reports 28 schools, 258 instructors, and 8,375 pupils in the school departments. The total number of inmates reported was 9,552, of which number 6,992 were males and 2,560 females. The value of grounds and buildings was $6,599,264. The amount expended was $1,588,705, for buildings and improvements $352,387, and for support $1,236,318. The number of assistants, not including teachers in the school departments, was 724.

The Western Division reports 7 schools, 12 instructors, 574 pupils in the school departments, and 574 in the industrial departments. The total number of inmates was 574—males 524, and females 50. The value of grounds and buildings was $654,670. The amount expended was $163,623, for buildings and improvements $13,423, and for support $153,200. The number of assistants in caring for inmates, not including teachers in the school departments, was 96.

CHAPTER LIII.

PUBLIC AND PRIVATE KINDERGARTENS.

The most difficult statistical work of this Bureau for 1897–98, and the most unsatisfactory in its results, was that of collecting information concerning kindergartens. This applies with special force to private kindergartens. This office obtained from many sources a list of more than 3,500 private kindergartens. When requests for statistics were sent to the individual kindergartens it was learned that at least 500 of them were no longer in existence. Every year hundreds of these schools are started by young women who have no special training or aptitude for the work. The result is failure for the individual and more or less discredit for the kindergarten movement in the community.

After repeated requests for information 1,519 private kindergartens reported statistics to this office. Detailed information from 1,479 other private kindergartens reported as still in existence could not be obtained. The 1,519 kindergartens reporting had 3,232 teachers and 47,853 pupils. Allowing proportionate numbers of teachers and pupils, it may be estimated that the 1,479 kindergartens not giving statistics had 3,173 teachers and 45,884 pupils. Taking this as a liberal estimate, the 2,998 private kindergartens had 6,405 teachers and 93,737 pupils in 1897–98.

Public kindergartens to the number of 1,365 were maintained in 189 cities in the United States. These kindergartens had 2,532 teachers and 95,867 pupils. The total number of children in public and private kindergartens, according to reports and estimates, was 189,604. (See Table 3 of this chapter, which summarizes the combined statistics of public and private kindergartens.) Estimating for private kindergartens whose location may be unknown to this office, it is not probable that the total number of children in all the kindergartens in the United States in 1897–98 exceeded 200,000.

The growth of the kindergarten movement in the last twenty-five years may be shown in the following table, which gives the number of public and private kindergartens, the number of teachers, and the number of pupils, as reported to this office for certain years beginning with 1873:

Year.	Kindergartens.	Teachers.	Pupils.	Year.	Kindergartens.	Teachers.	Pupils.
1873	42	73	1,252	1882	348	814	16,916
1874	55	125	1,636	1884	354	831	17,002
1875	95	216	2,809	1885	415	905	18,832
1876	130	364	4,090	1886	417	945	21,640

PUBLIC KINDERGARTENS.

The statistics in the above table prior to 1892 were never complete, even for the public kindergartens. Several cities failed to report for the first few years their experiments with the kindergarten. St. Louis was the first city to incorporate the kindergarten with its public school system. For the year ending June, 1874, there were 68 pupils in the public kindergartens of that city; 271 pupils in 1875; in 1876 there were 1,041; in 1877 the number had reached 3,333; in 1878 the number was 5,359, and in 1879 the kindergartens had 6,202 pupils.

The statistics of public kindergartens are summarized in the first six columns of Table 1 in this chapter. Of the 189 cities supporting kindergartens in connection with their public school systems 94 were in the North Atlantic Division and 68 in the North Central Division. In the first division 31 of the cities are in New York, 27 in Massachusetts, and 15 in Connecticut. In the North Central Division Michigan and Wisconsin each have 17 of the kindergarten cities.

In the 1,365 public kindergartens there were 2,532 teachers—hardly an average of 2 to the school. The 95,867 pupils would give an average of about 38 to the teacher. There were 2,783 more girls than boys in these kindergartens, or 46,542 boys and 49,325 girls.

In 1892 there were 137 cities reporting public kindergartens, as shown in Table 9. These cities had 459 kindergartens, 933 teachers, and 31,659 pupils.

Table 10 gives in detail the statistics of the public kindergartens in the 189 cities in 1898, as summarized in Table 1.

PRIVATE KINDERGARTENS.

The statistics of the 1,519 private kindergartens reporting to this office in 1897-98 are summarized in the last five columns of Table 1. There were 3,232 teachers, or an average of more than 2 to a school. There were 47,853 pupils, or scarcely 15 to a teacher. As already shown, the average number to a teacher in the public kindergartens was about 38, or 19 for each of the half day sessions.

The number of private kindergartens reporting to this office in 1892 was 852, with 1,602 teachers and 33,637 pupils, as shown in Table 9. The statistics of public kindergartens reported the same year will be found in the same table, while the combined statistics of public and private kindergartens for that year are given in the last three columns of Table 8.

The combined statistics of public and private kindergartens actually reporting for 1897-98 are summarized in Table 2. The same statistics combined with estimated figures for the 1,479 private kindergartens not reporting are given in Table 3.

Table 4 shows that of the 1,519 private kindergartens reporting 534 were mainly supported by kindergarten associations, 915 by tuition, and 70 by donations. Only 1,011 of the kindergartens reported their expenditures; these had 33,816 pupils and an aggregate expenditure of $519,252, or an average of $15.36 to the pupil.

Tables 5 to 8 summarize the statistics of public and private kindergartens from 1873 to 1892. These tables are compiled from returns made to this office and do not include estimates of schools not reporting.

Table 10 gives the detailed statistics of public kindergartens in the 189 cities whose returns are summarized in Table 1.

Table 11 is a list of the kindergarten associations reported to this office. A very large number of these associations failed to respond to requests from this office for information.

Table 12 is a list of training schools for kindergarten teachers and normal schools maintaining kindergarten training departments. Many of the training schools failed to respond to inquiries.

STATE PROVISION FOR KINDERGARTENS.

Kindergartens in connection with the public school systems are authorized by State law in Connecticut, Vermont, New York, Pennsylvania, Ohio, Indiana, Illinois, Iowa, Michigan, Wisconsin, Colorado, Washington, Oregon, California, Arizona, and the District of Columbia. Many cities in other States support kindergartens under general municipal powers granted by their charters of incorporation. By such authority kindergartens are supported in connection with the public school systems of certain cities in Massachusetts, Rhode Island, Maine, New Hampshire, New Jersey, Georgia, Kentucky, Alabama, Mississippi, Louisiana, Texas, Minnesota, Missouri, South Dakota, and Nebraska.

The following States assist the kindergarten movement by maintaining departments or classes for the training of kindergartners in the public normal schools: Alabama, California, Colorado, Connecticut, Florida, Indiana, Kansas, Louisiana, Massachusetts, Michigan, Missouri, Nebraska, New Jersey, New York, North Carolina, Pennsylvania, Virginia, Washington, and Wisconsin.

In general it may be stated that any city through powers inherent in its charter granted by the State may maintain public kindergartens as part of its system of schools, provided such kindergartens are supported wholly by local taxation. In most of the States the age limit for free attendance at the public schools is from 6 to 20, or 6 to 21. Manifestly, kindergartens in these States could not derive support from State school funds, where the children attending were below 6 years of age, without special legislative enactment.

In Massachusetts there is no age limit for free attendance at the public schools; in Connecticut the age limit is from 4 to 16; in Wisconsin from 4 to 20, and in Oregon from 4 to 20. It would seem that in these States legislative provision for public kindergartens receiving children 4 years of age and over would be unnecessary.

The public schools of Massachusetts are supported almost wholly by local taxation, and as there is no age limit for free attendance public kindergartens are not provided for in the State law. This State has a larger number of public kindergartens than any other except New York. There are 181 maintained in 27 cities, with 358 teachers and 10,977 pupils.

Public kindergartens are permitted by legislative enactment in the State of New York. (See Consolidated School Law of 1898, Title XV, "Miscellaneous provision.") Article 9, under the head of "Free kindergartens," reads as follows:

> The school authorities of any union, free, or common school district, located in any county having less than 1,000,000 inhabitants, may establish and maintain one or more free kindergarten schools. The moneys for the support of such schools shall be raised in like manner as for the support of the other public schools of such district. No child under the age of 4 years shall be admitted to the schools, and the local school authorities are hereby empowered to fix the highest age limit of children who may attend. All teachers employed in these schools shall be licensed in accordance with rules and regulations established by the superintendent of public instruction, and shall each share in the distribution of district quotas. The attendance of children under the age of 5 years who may be enrolled in the schools shall be reported separately and shall be counted in the distribution of public money.

In New York 31 cities have 218 public kindergartens, with 371 teachers and 15,817 pupils. Of the entire school revenue of this State the portion derived from local taxation is about 59 per cent, from State taxes 14 per cent, from permanent funds 1 per cent, and from other sources 26 per cent.

The Connecticut State law permits the establishment of public kindergartens for children between the ages of 3 and 7 years. Under this law 15 cities have 57 kindergartens, with 147 teachers and 3,083 pupils. In that State the portion of school revenue derived from local taxation is nearly 80 per cent, from State taxes nearly 11 per cent, from permanent funds about 5 per cent, and from other sources about 4 per cent.

Digitized by Google

New Jersey has no State law expressly providing for kindergartens, but local boards have organized them in 6 cities, where there are 46 kindergartens, with 64 teachers and 3,277 pupils. The State Normal School has a training course for kindergartners, using some of the organized kindergartens as model schools. The school-age limit in this State is from 5 to 20. Local taxation provides about 55 per cent of the school fund, State taxes 40 per cent, and permanent funds 5 per cent.

In Rhode Island kindergartens are not provided for by law, but they are maintained by five cities, in which there are 25 kindergartens, with 51 teachers and 1,511 pupils. The minimum age for attendance at the public common schools in this State is 5 years. More than 87 per cent of the entire school revenue of Rhode Island is derived from local taxation.

The Pennsylvania law allows the school directors to establish and maintain out of the public-school treasury kindergartens for children from 3 to 6 years of age. Under this provision two cities have 149 kindergartens, with 3,677 pupils. In this State over 59 per cent of the school revenue is derived from local taxes, 26 per cent from State taxes, 15 per cent from other sources.

In Wisconsin public kindergartens are expressly authorized by law. As the age limit in this State is from 4 to 20, and as local taxes provide more than three-fourths of the school revenue, there can be little controversy as to the means of support. In this State there are 17 cities maintaining 103 kindergartens, with 210 teachers and 11,735 pupils.

The Michigan school laws permit the establishment of kindergartens for children from 4 to 7. In that State 17 cities have 65 kindergartens, with 90 teachers and 4,013 pupils. More than 78 per cent of the public school revenue is derived from local taxation.

The Illinois legislature in 1895 passed the following act authorizing the establishment of kindergarten schools:

Be it enacted by the people of the State of Illinois, represented in the general assembly, That in addition to other grades or departments now established and maintained in the public schools of the State, any school district managed by a board of education or a board of directors is hereby empowered, when authorized by a majority of all the votes cast at an election for that purpose, such election to be called and held in accordance with the provisions of Article IX of an act entitled "An act to establish and maintain a system of free schools," approved and in force May 21, 1889, to establish, in connection with the public schools of such district, a kindergarten or kindergartens for the instruction of children between the ages of four and six years, to be paid for in the same manner as other grades and departments now established and maintained in the public schools of such district. No money accruing to such district from the school-tax fund of the State shall be used to defray the tuition or other expenses of such kindergarten, but the same shall be defrayed from the local tax and the special school revenue of said district.

All teachers in kindergartens established under this act shall hold a certificate issued as provided by law, certifying that the holder thereof has been examined upon kindergarten principles and is competent to teach the same.

Two cities in Illinois have 65 kindergartens, with 132 teachers and 5,671 pupils. The public schools of that State derive more than 86 per cent of their support from local taxation.

In Iowa independent districts are authorized to establish and maintain kindergartens. In this State 9 cities have 51 kindergartens, with 79 teachers and 2,675 pupils.

Indiana authorizes by law the establishment of kindergartens for children between the ages of 4 and 6, but they must be supported wholly by local taxation. In that State 8 cities have 26 kindergartens, with 43 teachers and 1,206 pupils. The public schools derive about 59 per cent of their support from local taxes, 26 per cent from State taxes, 9 per cent from permanent funds, and 6 per cent from other sources.

In Ohio kindergartens are authorized by the school law for children from 4 to 6 years but the support must be wholly local. In that State 7 cities support 27 kin-

Digitized by Google

dergartens, with 37 teachers and 1,740 pupils. More than 80 per cent of the support of the public schools is derived from local taxes.

The California school law recognizes kindergartens established by cities and towns in section 1617 of the code, which prescribes that trustees of school districts shall "exclude from schools children under 6 years of age; provided, that in cities and towns in which the kindergarten has been adopted, or may hereafter be adopted, as a part of the public primary schools, children may be admitted to such kindergarten classes at the age of 4 years."

There are 10 cities in California supporting 65 kindergartens, with 136 teachers and 4,580 pupils. The public schools of this State derive 45 per cent of their support from local taxes, 49 per cent from State taxes, 5 per cent from permanent funds, and 1 per cent from other sources.

In Colorado there are 4 cities which maintain 29 kindergartens, with 60 teachers and 1,504 pupils. There is no State school tax in this State. The schools derive over 80 per cent of their support from local taxes, about 3 per cent from permanent funds, and 17 per cent from other sources.

The Colorado law of 1893, authorizing the establishment of kindergartens, is as follows:

> The school board of any school district in the State shall have power to establish and maintain free kindergartens in connection with the public schools of said district for the instruction of children between three and six years of age residing in said district, and shall establish such courses of training, study, and discipline, and such rules and regulations governing such preparatory or kindergarten schools as said board may deem best: *Provided*, That nothing in this act shall be construed to change the law relating to the taking of the census of the school population or the apportionment of State and county school funds among the several counties and districts in this State: *Provided further*, That the cost of establishing and maintaining such kindergartens shall be paid from the special school fund of said districts, and the said kindergartens shall be a part of the public school system and governed as far as practicable in the same manner and by the same officers as is now, or hereafter may be, provided by law for the government of the other public schools of the State: *Provided further*, That teachers of kindergarten schools shall have a diploma from some reputable kindergarten teachers' institute or pass such examination on kindergarten work as the kindergarten department of the State Normal School may direct.

CHAPTER LIV.

NECROLOGY OF 1897.

AMERICAN.

ADAMS, WILLIAM TAYLOR (known as "Oliver Optic"), in Boston, Mass., Mar. 27; b. in Medway, Mass., July 30, 1822; his father was one of the early tavern keepers; was educated in the public schools of Boston; began teaching early in life and pursued that profession, with the exception of two years devoted to hotel business, until 1865. The remainder of his life was devoted to travels and writing books for young people.

AIKEN, HENRY OSGOOD, in Hanover, N. H., June 2; b. in Fitzwilliam, N. H., Aug. 16, 1864; fitted for college at Rutland (Vt.) High School and graduated at Dartmouth College in 1887; principal Rutland (Vt.) High School 1887–88; teacher of classics in St. Luke's School, Philadelphia, Pa., 1888–89; studied in Princeton Theological Seminary 1889–90; principal High School, Northfield, Vt., 1890–91; instructor in Latin in the Hill School, Pottstown, Pa., 1891–96; secretary of Y. M. C. A. and instructor in high school, Hanover, N. H., 1896 until decease.

ALLEN, FREDERICK DE FOREST, Ph. D., near Portsmouth, N. H., Aug. 5; b. in Oberlin, Ohio, May 25, 1844; graduated at Oberlin College 1863 and studied at the University of Leipsic; was professor of ancient languages, University of Tennessee, Knoxville, Tenn., 1866–68 and 1870–73; tutor in Harvard 1873–74; professor of ancient languages, University of Cincinnati, 1874–79; professor of Greek, Yale College, 1879–80; professor of classical philology in Harvard 1880–97. He was the editor and author of several Latin and Greek text-books.

ALLEN, HARRISON, M. D., in Philadelphia, Pa., Nov. 14; b. in that city Apr. 17, 1841; graduated at medical school of University of Pennsylvania in 1861; served through the war as a surgeon; was called to the chair of comparative anatomy and medical zoology in the medical school of his alma mater; was transferred in 1878 to the chair of physiology, which he occupied until his retirement as emeritus in 1895. In 1878 he became also professor of surgery and anatomy in the Philadelphia Dental College. He was president of the American Laryngological Association in 1886 and also of the American Anatomical Society in 1891-93. He was the author of several monographs and books on medical subjects.

ATKINS, JAMES HENRY, in Meriden, Conn., Oct. 25; b. there Apr. 25, 1828; graduated at Yale College 1849; taught in Plymouth, Conn., and was principal of the academy in his native town.

ATWATER, JOHN PHELPS, in Poughkeepsie, N. Y., May 23; b. in Carlisle, Pa., Mar. 4, 1813; graduated at Yale College in 1834 and at the Yale Medical School in 1837. He practiced his profession in Cincinnati, Ohio. Yale University received a bequest from him of a valuable piece of land in New Haven.

AUSTIN, SAMUEL, in Providence, R. I., Feb. 14; b. in Nantucket, Mass., June 15, 1816; received his education at the New England Yearly Meeting Boarding School and became an assistant teacher in the school; 1835–37 maintained a school in

Digitized by Google

Nantucket; 1837–44 instructor of chemistry and the natural sciences in the Friends' School, Providence, R. I.; up to 1868 conducted a private school—the Union Hall School—first for boys and later for both sexes; was the agent of the Rhode Island Educational Union; conducted the first evening school in Providence; introduced drawing as a separate study in the schools; devoted his closing years to education among the poor classes. He was a member of a large number of educational, religious, and philanthropic societies.

BABCOCK, JAMES FRANCIS, in Dorchester, Mass., July 20; b. in Boston, Mass., Feb. 23, 1844; graduated at the Lawrence Scientific School in 1862, making chemistry his specialty; was professor of chemistry in the Massachusetts College of Pharmacy 1869–74, and occupied the similar chair at the Boston University. He occupied several public positions, in which his scientific knowledge was valuable, and he also lectured widely.

BAKER, ERASMUS DARWIN, in Montgomery, Ala., Oct. 6; b. in Owasco, N. Y., June 18, 1826; attended Moravia Academy, New York; graduated at Amherst 1843; was principal of Genoa (N. Y.) Academy 1853; removed to Louisiana and taught in various places in that State; was instructor in a private family during the first years of the war; served in the Confederate Army; resumed teaching, and, with occasional employment as a civil engineer, followed that profession until his death.

BARTLETT, ENOCH NOYES, in Ventura, Cal., Aug. 13; b. in Bath, N. H., July 4, 1813; graduated at Oberlin College 1838 and from the Theological Seminary 1841. Most of his life was spent in ministerial work, but he taught at Mount Vernon, Ohio; Olivet, Mich., 1846–58, and was acting principal Oberlin College Academy, Ohio 1866–68.

BATEMAN, NEWTON, LL.D., in Galesburg, Ill., Oct. 21; b. in Fairfield, N. J., July 27, 1822; his early youth was spent at hard manual labor; worked his way through Illinois College and graduated in 1843; studied theology at Lane Theological Seminary; began his career as educator as principal of a private school in St. Louis, Mo. From 1847 till 1851 he was professor of mathematics in St. Charles College, Mo., and in the last year had charge of a public school at Jacksonville, Ill., having also to discharge the duties of principal of a high school, and later of school commissioner of the county. In 1858 he was elected State superintendent of public instruction. He was president of Knox College, Galesburg, Ill., from 1875 to 1892, when failing health compelled him to retire. He was a member of the State board of health for a number of years.

BEEBE, Rev. Dr. ALEXANDER, at Hamilton, N. Y., Feb. 20; aged 77 years. He became a member of the Colgate University faculty as early as 1850. The last chair occupied by him was that of homiletics.

BELL, ISAAC, in New York City, Sept. 30; b. there Aug. 4, 1814; went into business when 14 years old; was established in the South for a number of years, but returned to New York in the early sixties and entered upon a career of public benefaction. He was instrumental in the establishment of Bellevue Medical College and president of its trustees for a long time; was largely instrumental in establishing the Normal College, and became responsible for the school-ships *Mercury* and *St. Mary*. He was also a member of the department of education, and conspicuous among the members of the Union Defense Committee.

BERRY, MYRTA GAY HAMILTON, in Chicago, Ill., Mar. 19; b. in Clarksburg, Ind., Feb. 18, 1865; graduated at Oberlin Conservatory of Music 1887; taught in Knox Conservatory of Music 1887–88, and in Chicago 1889–93.

BLAKE, HENRY WALCOTT, in Springfield, Mass., Apr. 13; b. at Coventry, Conn., July 20, 1848; fitted for college at Monson Academy; graduated at Williams College in 1871; taught in North Carolina and at the Hampton (Va.) Institute. He, however, turned to newspaper work and had charge of the educational business of Milton Bradley in Springfield, giving especial attention to the Kindergarten News, published by that firm.

BRACE, SETH COLLINS, in Philadelphia, Pa., Jan. 25; b. in Newington, Conn., Aug. 3, 1811; graduated at Yale College 1832; taught in Lenox and Northampton, Mass., 1832–35; tutor at Yale 1835–38, at the same time a student of theology; was connected with editorship of the North American at intervals until 1845; professor of mathematics in Delaware College, Newark, Del., 1842–43; taught a young ladies' seminary in Pittsfield, Mass., 1847–51; supplied pulpits for an interval and was a private tutor in New Haven for six years.

BRITTAN, HARRIET G., in San Francisco, Cal., Apr. 30; b. in England about 1823. Her parents removed to Brooklyn, N. Y., in her childhood, and after acquiring a general education she spent two years teaching in Liberia under the auspices of the Missionary Society of the Episcopal Church; was a missionary in India fifteen years; 1880–93 she was superintendent of the large mission for the benefit of Eurasian children in Yokohama, Japan.

BRUSH, CHARLES BENJAMIN, in New York City, June 3; b. in that city Feb. 15, 1848; graduated as a civil engineer at the University of the City of New York; was appointed adjunct professor of civil engineering in his alma mater in 1874, became full professor and dean of engineer school in 1888. He was widely known in professional circles for his work in designing and constructing bridges and water-works. He was very influential as a member of the American Society of Civil Engineers.

BUNTEN, WILLIAM ELLINGWOOD, in Kingston, N. Y., Dec. 18; b. in Dunbarton, N. H., Dec. 21, 1833; fitted for college at Kimball Union Academy; graduated at Dartmouth College 1860; was a member of the bar; served two years in the war; taught ten years at Marblehead, Milton, and Waltham, Mass., and was principal of Ulster Academy, Kingston, N. Y., for fifteen years.

BURBECK, EDWARD CARLETON, in Denver, Colo., Mar. 27; b. in Hanover, N. H., July 18, 1846; fitted for college at Kimball Union Academy; graduated at Dartmouth College 1871; principal high school, Rockland, Mass., 1871–73; occupied a like position at Winchendon, Mass., 1873–74; Mount Pleasant Grammar School, Nashua, N. H., 1875–86; High School, Danvers, Mass., 1886–95. Ill health compelled him to go to Colorado, where he engaged in business.

BUTLER, CHARLES, LL. D., in New York City, Dec. 13; b. in Kinderhook Landing, Columbia County, N. Y.; was educated at Greenville (N. Y.) Academy; studied law and was admitted to the bar. He acquired wealth by early real estate investments in the regions that have since become the sites of Chicago and Toledo (Ohio), and by adjusting the debts of Michigan, Indiana, and Illinois, and by railroad enterprises in the West. He gave the ground on which is an industrial school in Toledo; was a founder and officer of Union Theological Seminary; since 1836 a member of the council of the University of the City of New York; a founder and officer also of the Protestant Half-Orphan Home and of the Westchester Temporary Home for Friendless Children. He gave $100,000 to Union Theological Seminary and the University of the City of New York.

CARRUTH, JAMES HARRISON, in Van Buren, Ark., Apr., 1896; b. in Phillipston, Worcester County, Mass., Feb. 10, 1807; entered Amherst College, but graduated at Yale College 1832; studied theology at Auburn and Yale Divinity School; taught three years between the two courses, and upon graduation from Divinity School taught eighteen years in Salem, Cherry Valley, and Watertown, N. Y.; 1863–66 was professor of natural sciences in Baker University in Kansas. He did ministerial work periodically, and for a short time about 1880 instructed in botany in Washburn College at Topeka. He published much, chiefly in connection with his work as State botanist.

CHAMBERLAIN, DAVID CHADWICK, in East Jaffrey, N. H., Oct. 24; b. in Jaffrey, N. H., Mar. 1, 1817; fitted at Melville (Jaffrey, N. H.) and Hancock academies; graduated at Amherst College 1844; taught in Melville Academy 1844–55, in Winchendon, Mass., 1855–66, and in succession for several years at Fitzwilliam and Pelham, N. H., and Ashburnham and Irving, Mass. He was occupied with other pursuits the rest of his life.

CHAMBERLAIN, JOSHUA METCALF, in Grinnell, Iowa, Nov. 12; b. in West Brookfield, Mass., Oct. 2, 1825; fitted at Thetford (Vt.) Academy; graduated at Dartmouth College 1855 and at Andover Theological Seminary 1858. His ministerial labors were mostly in Iowa, and he was a trustee of Iowa College from 1861, treasurer and financial agent 1868-87 and its librarian 1889-96. He was at different times editor of the "Grinnell (Iowa) Herald," of the "Grinnell Independent," and of "Congregational Iowa."

CHAMBERLIN, H. B., F. R. A. S., in England, in May; b. there in 1847; founder of the Chamberlin Observatory at Denver, Colo.

CHANDLER, GEORGE LANGDON, in Auburndale, Mass., Oct. 6; b. in Waterville, Me., Jan. 25, 1849; fitted for college in the Waterville Academy; attended Colby University, and graduated at Bowdoin College 1868. He taught successively at Dudley, Mass., Matawan, N. J., Kingston, Mass., and Mankato, Minn., 1873-79; was principal of Franklin (N. H.) high school, during which period he was a tutor of mathematics one year and an instructor of natural history another year at Bowdoin; 1879-88 was principal of a grammar school in Newton, Mass., and from the last date until his death he was teacher of physics and botany in the Newton high school, though for many years he had been superintendent and director of nature study in all the public schools of the city.

CLAGGETT, JAS. MILTON, in New York City, Jan. 7; b. in Northboro, Mass., Dec. 31, 1862; graduated at Yale College in 1884; established Maple Grove Academy in Eatontown, N. J., and conducted it until 1889; he then removed to New York and taught in the public schools.

COLBY, CHAS. EDWARD, in New York City, Oct. 15; b. in Lawrence, Mass., Oct. 18, 1855; studied in the common schools, one year in Germany, and graduated at Columbia College in 1877 as an engineer. Upon graduation became an assistant to Prof. Chas. F. Chandler, professor of analytical chemistry at Columbia College, and was associated with him until 1889, when the chair of organic chemistry was created for him.

COLGATE, SAMUEL, in Orange, N. J., Apr. 23; b. in New York City, Mar. 22, 1822; succeeded his father as head of the Colgate & Co., soap manufacturers; with a brother he erected Colgate Academy at cost of $60,000, and in recognition of their generosity to Madison University, in 1889, the name of the institution was changed to Colgate University. He was a large contributor to various charities. Among a large number of societies of the Baptist Church that shared in his benefactions was the Educational Society, which received $10,000.

COLLIER, PETER, Ph. D., M. D., in Ann Arbor, Mich., June 29, 1896; b. in Chittenango, N. Y., Aug. 17, 1835; graduated at Yale Sheffield 1860; was an assistant in chemistry 1862-66; became professor of chemistry, mineralogy, and metallurgy in the University of Vermont, also professor in the medical department and its dean from 1871. He served as one of the United States scientific commissioners to the Vienna Exposition in 1873; was chief chemist of Department of Agriculture at Washington for six years and later director of the New York State Agricultural Experiment Station at Geneva.

COPE, Prof. EDWARD DRINKER, in Philadelphia, Pa., Apr. 12; b. there July 28, 1840. His education was obtained at the Friends' Select School in Philadelphia and in Westtown Academy; later he was associated with a group of young naturalists who received instruction from Professor Baird while in the employ of the Smithsonian Institution; during 1863-64 he studied in Europe, and on his return accepted the chair of Natural Sciences in Haverford College. Under official—Federal or State—supervision he made geological surveys of Ohio, Kansas, Wyoming, Colorado, and nearly all the Territories, traversing from the Gulf of Mexico to the British line and from the Missouri River to the Pacific Ocean. He made great discoveries in his field of science. After 1878 he was an editor and part of the time owner of "The American Naturalist." From 1891 he occupied the chair of Geology and Palæontology in the University of Pennsyl-

Digitized by Google

vania; was curator and secretary of the Academy of Natural Sciences. He bequeathed his library and osteological collection to the school of biology and directed that his palæontological collections should be sold at his death and the proceeds devoted to the endowment of a professorship of vertebrate palæontology in the Academy of Natural Sciences. His writings are numerous and valuable.

CORSON, JULIET, in New York City, June 18; b. in Roxbury, Mass., Feb. 14, 1842; in her early life she had to struggle with poverty, but employment in a library helped her to drift into a successful career as a writer for magazines and periodicals. In 1876 she established the New York School of Cookery and was its superintendent until 1883. Her instructions were not restricted to any one class of society. She wrote several very useful books on cooking and other branches of domestic science. The title of "Mother of Cookery" was justly accorded to her.

COTHREN, CHARLES, in Red Bank, N. J., Oct. 28; b. in Farmington, Me., June 16, 1822; fitted for college at the academy at Farmington; graduated at Bowdoin College in 1849; taught three years in Connecticut and New Jersey; 1852–67, with his brother, he established and conducted Ocean Institute, near Long Branch, N. J.; taught again in Red Bank 1867–70, and spent the remainder of his life in business pursuits and performing useful public duties for his town.

COTTING, BENJAMIN E., A. M., M. D., in Roxbury, Mass., May 22; b. in Arlington (then West Cambridge) on Nov. 12, 1812; went first to the regular public schools and later was an inmate of Angiers' Private School, in Medford, one of the popular boarding schools of the day; graduated at Harvard College in 1834. John Lowell, jr., having bequeathed about $250,000 for the maintenance and support of public lectures to be delivered in Boston, Dr. Cotting became the assistant of Dr. Wyman in this work, and from 1842 until Apr., 1897, was curator of the fund and in reality developed the practical system for its application. He was also very prominent in his profession.

CRAWFORD, Rev. A. K., in Oakland, Cal., October 11; b. in Nova Scotia April 27, 1830; educated at Concord, N. H., and Wesleyan University, Connecticut; taught school in the University of the Pacific, and entered the ministry, still teaching and doing institute work in California.

CROCKER, Rev. J. N., in Saratoga, N. Y., June 20; b. in Cambridge, N. Y., May 13, 1827; graduated at Princeton Theological Seminary; preached at Carlisle and Charlton, N. Y.; was superintendent of schools for a number of years at Saratoga; returned to the ministry and from 1879 until his death occupied the superintendency for New York, having been appointed by the State Presbyterian Synod.

CROOKER, GEORGE RICHARD, in Madison, N. J., Feb. 20; b. in Philadelphia, Pa., Feb. 3, 1822; graduated at Dickinson College in 1840; spent two years West as a missionary; 1842–43 was classical and mathematical tutor of Dickinson College; 1843–46 principal Collegiate Grammar School; 1846–48 adjunct professor of ancient languages. He was engaged in the ministry in Philadelphia, Wilmington, New York, and Brooklyn, and in 1860–75 editor of The Methodist; from 1880 until his death he was professor of historical theology in Drew Theological Seminary. He was the founder of Children's Day in the Methodist Church and the children's fund for education of Methodist youth.

CROSBY, MINOTT SHERMAN, in Waterbury, Conn., Jan. 16; b. in Conway, Mass., June 23, 1829; fitted for college at Phillips (Andover) Academy and graduated at Amherst College in 1850; 1850–60 taught in public schools of several places in Connecticut and in private schools in Virginia and New York; 1860–71 was the principal of the Hartford (Conn.) Female Seminary; 1870–91 superintendent of schools and principal of high school, Waterbury, Conn. In 1891, on separation of the two offices, he retained the superintendency of schools and during the remainder of his life.

CURRIER, DAVID D., in Lawrence, Mass., Mar. 9; aged 92; b. in Wentworth, N. H.; was educated in the public schools of his native town and made teaching his life work.

DAHL, OLAUS, Ph. D., in Chicago, Ill., Mar. 10; b. in Nannestad, Norway, Sept. 15, 1859; came to the United States in childhood; graduated at Luther College, Decorah, Iowa, 1885, and at the Yale Divinity School in 1891; was the tutor in the Danish and Swedish languages in the academical department of Yale 1890–94, and from 1894 until his death was lecturer on Scandinavian literature in the University of Chicago.

DAMON, MEHITABLE C., in Lynn, Mass., Apr. 27; b. in Waltham, Mass., in 1820. She taught in Lynn from the time she was 15 years of age, with the exception of two or three years.

DANIELS, FRANK WILLIS, in Winchester, Mass., Dec. 8; b. in Franklin, N. H., Oct. 7, 1848; graduated at Dartmouth College 1868. He was engaged in mercantile pursuits. Dartmouth College was made his residuary legatee.

DAVIDSON, MILTON, at Newfane, Vt., Aug. 23; b. in Unity, N. H., Nov. 28, 1834; fitted at Kimball Union Academy, Meriden, N. H., and New London (N. H.) Academy; graduated at Dartmouth College 1862; taught in Vermont, New Hampshire, and New York 1864–68; Fairfax, Vt., 1868–70; principal Leland and Gray Seminary, Townsend, Vt., 1870–74. He was a banker the remainder of his life.

DAY, DAVID A., at sea Dec. 17; b. in Pennsylvania about 1847; was educated at the Susquehanna Lutheran University, Selinsgrove, Pa., and graduated in medicine; went to the Muhlenberg Mission, near Monrovia, Liberia, Africa, and labored twenty-three years, combining in his work the evangelical, educational, and industrial elements. He allotted small tracts of a 10,000-acre farm which he had acquired and brought to a high state of cultivation to the people of the mission, and made the mission one of the most successful on that continent.

DEARBORN, Prof. HEMAN ALLEN, in College Hill, Mass., May 4; b. in Weare, N. H., May 18, 1837. He attended the district schools and Francestown Academy, and began teaching at the age of 17, at the same time studying. He entered Tufts College in his junior year and graduated in 1857 as valedictorian of the first class to receive degrees from the college. He taught a school in Arlington for three years after his graduation and then became principal of the Clinton Liberal Institute. From 1864 he was connected with Tufts College as professor of Latin, and up to 1894 also as secretary of the faculty, and at the last date, when the chair of registrar was created, he filled that position, whose duties he had already performed for a number of years. Up to W. A. Start's appointment as treasurer of the college he had also acted as assistant. He founded a scholarship, known as the scholarship of the class of 1857, for the benefit of women students.

DENNETT, Mrs. CAROLYN I. (Works), in Fitchburg, Mass., Mar. 30; aged 40 years. She had been a teacher in West Fitchburg and an assistant public librarian for several years.

DOANE, THOMAS, in West Townsend, Vt., Oct. 22; b. in Orleans, Mass., Sept. 20, 1821; was well known as a very successful and skillful civil engineer, being connected with the construction of the Hoosac Tunnel and large railway construction in the West. While in Nebraska he promoted the agitation for the establishment of a college and secured for its site a square mile of ground at Crete, 20 miles southwest of Lincoln. For his services the institution was named Doane College. At his death he bequeathed to the college the reversion of an estate valued at $150,000 to $200,000.

DODD, Prof. CYRUS MORRIS, in Williamstown, Mass., Apr. 25; b. in Broadalbin, N. Y., Nov. 19, 1826; being dependent upon his own resources he was compelled to resort to teaching after one year in college. After an absence of seven years

Digitized by Google

teaching in Maryland and elsewhere he reentered college in the junior class and graduated at Williams in 1855. Upon leaving college he taught two years at Salem, N. J.; was then appointed professor of Latin in Jefferson College, where he served until 1866; in 1866–70 he was professor of Latin and mathematics in the University of Indiana. He was then called to the chair of mathematics in Williams College and remained there until his death.

DRISLER, Prof. HENRY, LL. D., in New York City, Nov. 30; b. on Staten Island, N. Y., Dec. 27, 1818; graduated at Columbia College in 1839 and became classical instructor in Columbia Grammar School; in 1843 was appointed tutor of Latin and Greek in Columbia, and in 1845 adjunct professor of those languages; in 1857 was made full professor of Latin and ten years later professor of Greek; in 1889 became dean of the faculty of arts, which office and title of Jay professor of Greek he retained until 1894 when he became professor emeritus. Twice he was acting president—in 1867, when President Barnard was absent as commissioner to the Paris Exposition, and in 1888, when the president resigned. With Dr. Anthon he prepared a series of classical text-books and reedited several lexicons. The trustees of the college established the Henry Drisler fellowship in classical philology and President Low created the Henry Drisler classical fund of $10,000 for the purchase of equipment for the departments of Latin and Greek as a memorial to him.

DUDLEY, JAS. FREDERICK, in New Orleans, La., Mar. 19; b. in Hampden, Me., Feb. 1, 1841; graduated at Bowdoin College in 1865; was principal of the academy at Hampden, Me., and later of the high school at Thomaston, Me. He went into insurance business, and at his death was a director and vice-president of the Ætna Insurance Company of Hartford, Conn.

DURYEE, Dr. WILLIAM RANKIN, in New Brunswick, N. J., Jan. 20; b. in Newark, N. J., Apr. 10, 1838; graduated at Rutgers College in 1856 and at the New Brunswick Theological Seminary in 1861; served during the war as chaplain and acting assistant surgeon. In 1864 he organized and was pastor of the Reformed Church at Lafayette, a suburb of Jersey City, until 1891, when he became professor of ethics and chaplain at Rutgers College. He was the author of a number of publications.

DUNNING, HOMER NORTHROP, in South Norwalk, Conn., Mar. 27; b. in Brookfield, Conn., July 17, 1827; graduated at Yale College 1848; was principal of the academy at Sag Harbor, Long Island, one year; then took full course at Union Theological Seminary. He retired from ministerial work in 1883, and until his death taught privately in South Norwalk and did literary work.

DWIGHT, JOSEPH MCLAREN BREED, in New Haven, Conn., June 28; b. in Norwich, Conn., Aug. 11, 1825; graduated at Yale in 1846; taught a couple of years in the Brainard Academy at Haddam, Conn.; was a tutor in Yale 1849 to 1854; studied theology first at Andover and removed to Yale Divinity School in 1856; 1856–59 was engaged in New Haven, Conn., in private teaching and preaching. He studied law in Columbia Law School, graduated, and was admitted to the bar. From 1863 to 1866 he was assistant instructor in municipal law in Columbia College. The remainder of his life was absorbed by private duties at New Haven, where he made his home.

DYER, MICAH, in Boston, Mass., Nov. 24; b. there Sept. 27, 1829; attended the old Eliot School, where he received the Franklin medal; studied also at Wilbraham Academy and Tilton Seminary, and graduated at Harvard Law School in 1850. He had a large practice and the management of a number of estates; was several times elected to the legislature; served a number of years as member of the Boston school board and chairman of the Eliot committee. He was the first president of the Female Medical College, in Boston, established in 1855. He was a member of a large number of charitable, benevolent, religious, patriotic, and philanthropic societies.

EMERY, CALEB, in Brookline, Mass., Dec. 1; b. in Sanford, Me., Mar. 18, 1813; fitted for college at Phillips Andover Academy, Mass.; graduated at Dartmouth College in 1842; studied at Andover Theological Seminary, but chose teaching as a profession; taught one year in a private school in Westboro, Mass.; one year in Nashua, N. H.; Pinkerton Academy, Derry, N. H., 1846–48; first principal of High School, Charlestown, Mass., 1848–50; Boston Latin School, 1850–55; Ladies' Private School, 1855–64; Charlestown (Mass.) High School, 1864–85. The remainder of his life was spent in retirement in Boston and Brookline.

EVANS, Dr. JOHN, in Denver, Colo., July 3; b. in Waynesville, Ohio, Mar. 9, 1814; graduated at the medical department of Cincinnati College in 1838; practiced first at Ottawa, Ill., but soon removed to Attica, Ind., where he was instrumental in the erection of the first insane asylum in Indiana. He was superintendent of this institution till 1848, when he became a member of the faculty of Rush Medical College at Chicago. Early investments in real estate in Chicago gave him wealth and he founded Northwestern University in Evanston, Ill. He became interested in railroad investments; was governor of Colorado Territory; organized the military by which General Sibley's Texas Rangers were repelled in invading the State. President Johnson removed Governor Evans, but on admission of Colorado to statehood he was returned as United States Senator. He founded the University of Denver, giving $200,000 for its construction and a subsequent large endowment; erected Evans Chapel, and aided nearly every Methodist congregation and educational institution in the State.

EVANS, Dr. THOMAS WILLIAMS, in Paris, France, Nov. 14; b. in Philadelphia, Pa., Dec. 23, 1823; early in life took up the work of a goldsmith and dental-plate maker, which led him to dentistry. In 1848 he went to Paris to engage in the profession of dentistry and remained there until his death. His practice brought him wealth. Out of an estate valued at $8,000,000 to $12,000,000 he bequeathed all but $250,000 for founding a museum and institute in Philadelphia, Pa.

FAIRBANKS, LORENZO SAYLES, in Boston, Mass., May 22; b. in Pepperell, Mass., Mar. 16, 1825; fitted for college at Leland and Gray Seminary, Townshend, Vt., and Black River Academy, Ludlow, Vt.; graduated at Dartmouth College in 1852; studied law and settled in Davenport, Iowa; was principal of a commercial school, Philadelphia, Pa., 1860–63; principal and proprietor Quaker City Business College, Philadelphia, 1863–68. He returned to the practice of his profession in Boston.

FENN, AUGUSTUS HALL, in W. Winsted, Conn., Sept. 12; b. in Plymouth, Conn., Jan. 18, 1844. Served in the war until he lost an arm; resigned and studied law. In 1887 he was appointed a judge of the superior court of Connecticut, and in 1893 became a judge of the supreme court of errors. For many years he was a lecturer on law at the Yale Law School.

FINZER, NICHOLAS, in Louisville, Ky., July 25, 1896; b. in canton of Berne, Switzerland, Jan. 1, 1848; came to Louisville very early in life and was educated in the common schools. With a brother went into the tobacco business in a very small way, but the business prospered and assumed large proportions, and he at length became the head of the company and officer in many others as well. He was the father of the Louisville public night schools, being a member of the school board for a number of years. He also succeeded in having a resolution passed providing for an annual picnic for the school children and for an advanced course for night scholars; he was instrumental in the organization of a club to secure courses in instruction in literature, history, rhetoric, and composition. He expended annually hundreds of dollars in prizes for the schools.

FOLSOM, Prof. E. G., in Penn Yan, N. Y., June 16; b. in Wayne, Ohio, sixty-six years ago. He began teaching penmanship in Cleveland, Ohio, when 20 years of age; graduated at Oberlin College 1857; opened the first business college in Cleveland and remained there several years; in 1862 took charge of the business college in

Digitized by Google

Albany, N. Y., and was interested in others in important cities of the State. He was President of the Association of Business Educators of America.

FORD, CHAS. HENRY, in Chicago, Ill., Jan. 8; b. in Abeiah, Syria, where his father was a missionary; his early youth was spent in Athens, Pa.; he was fitted for college by Professor Phillips, of Boston, and graduated at Williams College in 1877; taught four years in the State Normal School, Kirksville, Mo.; removed to Chicago, and after teaching a year at the Cook County Normal School became, and remained until his death, principal of the Calhoun School.

FOSTER, Prof. JOHN, in Boston, Mass., in October; b. in Hebron, Washington County, N. Y., eighty-three years ago; graduated at Union College in 1835; in 1836 he was made a member of the faculty of his alma mater, and for nearly half a century he instructed her sons in natural philosophy. In 1883 he became emeritus professor.

FOSTER, JOHN, in Boston, Mass., Apr. 9; b. in Hudson, N. H., Dec. 30, 1817; was soon established in the grocery business and acquired wealth. He made a large contribution toward erecting one of the recent buildings of the Massachusetts Institute of Technology, and at his death made it his beneficiary to the extent of $10,000. He left $121,000 to various charitable, religious, and educational societies and institutions.

FOWLER, STEPHEN, in Litchfield, N. H., May 3; b. in Windsor, Vt., Mar. 3, 1812; graduated at Dartmouth College in 1835; taught in the South 1835–43; founded a school for boys in Detroit, Mich., and conducted it several years. He went into business later.

FOYE, JAMES CLARK, in Chicago, Ill., Oct., 1896; b. in Great Falls, N. H., Mar. 1, 1841; graduated at Williams College in 1863; was a teacher of natural sciences in Cincinnati Wesleyan Female College; principal for a short time of the Linden Hill Academy, New Carlisle, Ohio, and afterwards president of Jonesboro Female College in Tennessee; 1867–93, was professor of chemistry and physics at Lawrence University. At the opening of Armour Institute, in Chicago, he was elected to the chair of chemistry and remained there until his death.

FRENCH, GEORGE FRANKLIN, in Minneapolis, Minn., July 13; b. in Dover, N. H., Oct. 30, 1837; graduated at Harvard College in 1859 and at its medical school in 1862; served through the war as a surgeon; settled in Portland, Me., for practice and in 1875 was appointed instructor in physiology and lecturer on dermatology in Portland Medical School. Having removed to Minneapolis, in 1881 was appointed lecturer on obstetrics in St. Paul Medical School; 1882–85, held the same chair in the Minneapolis Hospital College, and in 1886 became professor of gynæcology in the same institution. In 1887 he was president of the State examination board, and in 1890 held a like position in the Minnesota Academy of Medicine.

FRENCH, JOHN RAYMOND, LL. D., in Syracuse, N. Y., Apr. 26; b. in Pulaski, Oswego County, N. Y., Apr. 21, 1825; graduated at Union College in 1849; soon became professor of mathematics in Falley Seminary, Fulton, N. Y., and subsequently principal; 1854–59, principal Mexico Academy; studied law and practiced five years. In 1864 he became professor of mathematics at Genesee College, and when that institution was removed to Syracuse, in 1871, he was elected dean of the College of Liberal Arts, retaining also the chair of mathematics till within a short time of his death. For nearly three years he was vice-chancellor of the university.

GOODE, WILLIAM HENRY, in Staunton, Va., Feb. 2; b. in Dinwiddie County, Va., Mar. 9, 1814; graduated at Hampden Sidney College 1839 and at Yale Medical College 1842; he was assistant for a number of years to Prof. John W. Draper in chemistry at the University of the City of New York.

GOULD, Prof. BENJAMIN APTHORP, in Cambridge, Mass., Nov. 26; b. in Boston in 1824; graduated at Harvard in 1839; studied astronomy and other sciences abroad. He did much to arouse interest in astronomy throughout this country; main-

Digitized by Google

tained at his own expense the astronomical journal published in the United States; organized the Dudley Observatory in Albany, and did a large work in the science in South America.

GREATOREX, Mrs. ELIZA, in Paris, France, Feb.; b. at Manor Hamilton, Ireland, Dec. 25, 1819; her husband was the noted singer of that name; she was the first woman elected an associate of the National Academy, and she was also the only woman who had membership of the Artists' Fund Society of New York. Her paintings were much admired, but pen and ink work was her specialty.

GREEN, TRAILL, LL. D., in Easton, Pa., Apr. 29; b. there May 25, 1813; graduated in medicine at the University of Pennsylvania in 1835 and settled in Easton for practice; was elected professor of general and applied chemistry at Lafayette College in 1837 and of natural sciences at Marshall College, Mercersburg, in 1841. He returned to Lafayette College in 1847; organized the Pardee Scientific Department there and was its dean till within a few years of his death. He built and gave to the college the Astronomical Observatory; was the first president of the American Academy of Medicine, and president of the Pennsylvania Medical Society in 1868.

GREGORY, EMILY L., Ph. D., in May; was a graduate of Cornell and studied at Zurich; she was head of the department of botany in Barnard College and was the author of several text-books on her subject.

GREGORY, HENRY DUVALL, LL. D., in Philadelphia, Pa., Feb. 14; b. there Sept. 18, 1819; graduated at the University of Pennsylvania in 1838; spent several years as an assistant teacher in the University Grammar School and as teacher of Latin in Haverford College; 1845–72, conducted a classical school in Philadelphia; 1875–83, was professor at Blair Presbyterian Academy at Blairstown, N. J.; 1883, until his health made his retirement necessary in 1892, he was vice-president of Girard College.

GRIGGS, JOSEPH FRANKLIN, in Pittsburg, Pa., Apr. 1; b. in Sutton, Mass.; prepared for college at Wesleyan, Wilbraham, and Leicester academies; graduated at Yale College 1846; studied a while at Andover Theological Seminary; taught select schools in Sutton and Holden, Mass., 1847–48, and in the Men's Winter Schools, Worcester, Mass., 1848–49; conducted a classical school for boys in Allegheny and Pittsburg, Pa., 1849–55, when it was merged into the Wesleyan University of Pennsylvania. He was then professor of ancient languages in the university until 1864; then professor of the Greek language and literature until 1880; afterwards secretary and treasurer of the board of trustees until disabled by sickness in 1892.

HALE, GEORGE SILSBEE, A. M., in Bar Harbor, Me., July 27; b. in Keene, N. H., Sept. 24, 1825; attended school in Keene, Concord, and Walpole, N. H., Phillips Exeter Academy, and graduated at Harvard in 1844; attended the Cambridge Law School; taught school in Virginia and was admitted to the practice of law. He attained the highest rank at the bar; was interested in a great many charitable and philanthropic movements, and for years was the president of the board of trustees of Phillips Exeter Academy.

HALLOCK, Dr. LOUIS, in New York City, Mar. 3; b. there June 30, 1803; graduated at College of Physicians and Surgeons in 1825; became a homeopath, and in 1844 assisted in the founding of the American Institute of Homeopathy; he was a trustee of the New York Homeopathic Medical College and Hospital.

HARDY, GEORGE E., in Roselle, N. J., Apr. 15; b. in New York City in 1859; graduated at the College of the City of New York in 1878; began teaching in the public schools of the city; was principal of Grammar School No. 80 a number of years; was elected president of the State Teachers' Association; from 1894 till his death was professor of the English language and literature in the College of the City of New York. He was favorably known as a writer and lecturer on educational topics; was a founder of the Catholic Summer School of America; was the author of Five Hundred Books for the Young, an unfinished history of England, and a history of English literature for schools.

HARMAN, HENRY M., D. D., LL. D., in Baltimore, Md., July 2; b. in Arundel County, Md., Mar. 22, 1822; graduated at Dickinson College, 1849; became professor of ancient languages and literature in Dickinson College in 1870, and was professor emeritus at the time of his death.

HARRIS, HENRY HERBERT, D. D., LL. D., in Lynchburg, Va., Feb. 4; b. in Louisa County, Va., Dec. 17, 1837; graduated at University of Virginia in 1860; was an instructor in Albemarle Female Institute; served through the civil war in the Confederate Army; was largely instrumental in the reopening of Richmond College; after the war was professor of Greek there, 1866–96, and chairman of its faculty four years; 1896 until his death he was one of the faculty of the Southern Baptist Theological Seminary at Louisville, Ky. His first preaching was to a colored congregation; was pastor of a small church in the suburbs of Richmond; was at different times editor of the Educational Journal, of Virginia, Foreign Mission Journal, and The Religious Herald, of Richmond.

HART, CHARLES THEODORE, in Berkeley, Cal., Feb. 18; b. at Mystic Bridge, Conn., Jan. 15, 1827; graduated at Yale College, 1847; went to Sacramento, Cal., and established and conducted for a number of years the first school there. He also practiced law.

HARWOOD, CHAS. ELLIOTT, in Orleans, Mass., Mar. 22; b. in Enfield, Mass., June 16, 1842; fitted for college at Williston Seminary; graduated at Amherst College in 1865 and at Andover Theological Seminary in 1869; taught in Lawrence Academy, Falmouth, Mass., and 1871–80, while pastor at Orleans, Mass., was also superintendent of the town schools. He traveled abroad, and ended his life as a home missionary among the islands of the Maine coast.

HASKELL, ROBERT CHANDLER, in Lansingburg, N. Y., May 12; b. in Weathersfield, Vt., Sept. 6, 1834; graduated at Yale College, 1858; was professor of mathematics in Oahu College, Honolulu, nearly two years, but was obliged by the death of a brother to take up his business of manufacturing floor oilcloths in Lansingburg, N. Y. He was a school trustee for nearly thirty years, and in more than one instance employed at his own expense instructors in order to insure the high standard of efficiency at which he was aiming.

HESING, WASHINGTON, in Chicago, Ill., Dec. 18; b. in Cincinnati, Ohio, May 14, 1849; graduated at Yale College, 1870, and studied in Germany. He succeeded his father in the proprietorship of the Illinois Staats-Zeitung, and was connected with the paper until his death; was a member of the Chicago board of education, 1872; a member of the county board of education, 1880, and its president in 1882. In 1890, during the controversy on the school question, he gave his influence to the liberal side. He was postmaster of Chicago in 1894, and the unsuccessful independent candidate for mayor in the spring of 1897.

HEWIT, AUGUSTINE FRANCIS, D. D. (whose baptismal name was Nathaniel Augustus), in New York City, July 3; b. in Fairfield, Conn., of Presbyterian parentage, Nov. 27, 1820; fitted for college at Phillips Andover Academy; graduated at Amherst College in 1839; became a Congregational minister, then an Episcopal minister, and, finally, a Roman Catholic. He was one of the chief authorities on church history, theology, and philosophy in this country; was the superior of the Paulists and lecturer in the Catholic University of America.

HINCKLEY, EDWARD STRONG, in Norwich, Conn., Aug. 10 (1896); b. in Lebanon, Conn., Nov. 12, 1834; graduated at Yale College in 1858; taught and studied law in Norwich, Conn., 1858–60; principal academy, Lebanon, Conn., 1860–61; served through the war; was for many years principal of the Lebanon Academy.

HITCHCOCK, OSCAR BLAKESLEE, at Shelter Island, New York, July 7; b. in Windham, N. Y., May 24, 1828; fitted for college at Delhi (N. Y.) Academy, Wesleyan Academy, Wilbraham, Mass., and Amenia (N. Y.) Seminary; graduated at Union College, 1852; studied at Yale Divinity School, Poughkeepsie Law School; graduated at Andover Theological Seminary, 1856; served through the war as a chaplain, and resided at Windham, N. Y., without charge, preaching and lectur-

Digitized by Google

ing occasionally, being occupied principally with the care of his father's estate. He left $30,000 and his library to Union College.

HOAR, Judge EBENEZER ROCKWOOD, Jan. 31; b. in Concord, Mass., Feb. 21, 1826; a brother of Senator George F. Hoar. He was a member of the State senate, 1846; judge court common pleas, 1849–55; judge of the supreme judicial court, 1859–69; overseer of Harvard College for nearly twenty-five years; Attorney-General of the United States, 1869–70; a member of the Joint High Commission of United States, Great Britain, and Ireland in 1871. He was also a member of the Forty-third Congress and Presidential elector at large in 1876.

HOFFMANN, CHARLES FREDERICK, D. D., LL. D., D. C. L., on Jekyll Island, near Brunswick, Ga., Mar. 4; b. in New York City in 1834; graduated at Trinity College in 1851; took a three years' course at General Theological Seminary. He did mission work at Boonton, N. J., held charges at Burlington, N. J., and Garrisons, N. Y., and from 1874 until his death was rector of All Angels, New York City. He inherited large wealth from his father and gave liberally. His gifts to education were to St. Stephen's College at Annandale, N. Y., $200,000; an endowment to Hobart College at Geneva, N. Y.; a library building for the A. T. Porter Institute at Charleston, S. C., and $40,000 to the University of the South at Suwanee, Tenn.

HOLLISTER, ARTHUR NELSON, in Hartford, Conn., Jan. 18; b. in Andover, Conn., Dec. 28, 1835; graduated at Yale College, 1858; he taught eight years in Hartford, Conn., in the sixties, and again from 1878 to 1883.

HOLMES, Prof. GEORGE FREDERICK, in Charlottesville, Va., Nov. 4; b. in Demerara, British Guiana, in 1820; was educated at Durham University, England, and came to the United States in 1838; taught school in Virginia, Georgia, and South Carolina, and in 1842 was admitted to the bar of the last State by special act of the legislature before he was naturalized. He was a professor in Richmond College, 1845–46; president of University of Mississippi, 1846–47; professor of history, international law, and political economy in William and Mary College, 1847–57; professor of history and literature in the University of Virginia, 1857, until his death. At one time he was assistant editor of the Southern Review, and he was author of a series of text-books for use in Southern schools and colleges.

HOLMES, SAMUEL, in Montclair, N. J., Dec. 9; b. in Waterbury, Conn., in 1824; a member of the prominent missionary societies and for many years treasurer, secretary, or vice-president of the American Educational Society. To the latter society he gave $5,000; to Yale four perpetual scholarships for students from Waterbury, Conn., and $25,000 for the founding of a professorship at Yale Divinity School.

HOSFORD, Mrs. ABIGAIL ALLEN, in Olivet, Mich., Apr. 24; b. in Mansfield, Mass., Apr. 10, 1824; graduated at Oberlin College in 1846; was principal of ladies' department and teacher, Olivet College, 1848–58. Her husband was Prof. Oramel Hosford of the same institution.

HOVEY, Gen. CHARLES EDWARD, in Washington, D. C., Nov. 7; b. in Thetford, Vt., Apr. 26, 1827; fitted for college at Thetford Academy and graduated at Dartmouth College in 1852; principal of the high school, Framingham, Mass., 1852–54; in charge of a private school in Peoria, Ill., one year; later superintendent of the city public schools, and president of the State Teachers' Association. The organization of the Illinois Normal University was largely due to his efforts, and he was its president, 1857–61. His service in the war began as colonel of the Thirty-third Illinois Infantry, and he was brevetted major-general for gallantry. He practiced law in Washington the remainder of his life.

HOWARD, CATHARINE LATHROP, in Springfield, Mass., Dec. 3; b. there Feb. 24, 1833; was educated in the public schools, and Miss Harding's class and Miss Campbell's school. In 1860 in Louis Agassiz's school at Cambridge, Mass. For twenty-seven years she conducted the Howard School for Girls in Springfield.

HUBBARD, GARDINER GREENE, LL. D., in Washington, D. C., Dec. 11; b. in Boston, Mass., Aug. 25, 1822; graduated at Dartmouth College in 1841, and studied law at the Harvard law school. He acquired large wealth, was a promoter of the Bell Telephone. He was the founder and trustee, until his death, of the Clarke School for the Deaf and Dumb in Northampton, Mass.; a trustee of Columbian University, and gave the money for a course of lectures at his alma mater.

HUBBARD, Mrs. MELISSA J., in Glenullin, N. Dak., Apr. 20; b. in Goshen, Mass., Feb. 19, 1833; prepared for college at Oberlin Preparatory, and graduated at Oberlin College in 1859; taught in Oberlin, 1859–62; in Sheboygan Falls, Wis., 1862–65; in Oberlin, 1865–85; in Glenullin, 1885–96.

HUBBARD, NEWTON S., in Brookline, Mass., Feb. 14; b. in Brimfield, Mass., Dec. 19, 1816; was educated in the public schools of his native town, and at Monson, Westfield, and Amherst academies; he started as a teacher but engaged later in farming. He traveled extensively and was very progressive. From the founding of the Hitchcock Free High School until his death he was a trustee, and from his twenty-first year he was a member of the school committee of Brimfield.

HYDE, HENRY DWIGHT, in Boston, Mass., Apr. 17; b. in Southbridge Mass., Apr. 27, 1838; fitted for college at Leicester Academy and Williston Seminary; graduated at Amherst College 1861; he became a lawyer of wide prominence; was assistant United States district attorney in 1867; was the donor (1870) to Amherst College of the Hyde prize for excellence in oratory for seniors, and a trustee of the college from 1877 until his death; a trustee also of Mount Holyoke College, 1880–93.

JACKSON, Dr. SAMUEL HAHNEMANN, in Jamaica Plain; Boston, Mass., Feb. 27; b. in Plymouth, Mass., June, 1854; was educated in the public schools of Plymouth, and graduated at the Pulte Medical School, Cincinnati, Ohio; was for several years professor of medicine in the Boston University Medical School.

JERMAIN, JAMES BARCLAY, LL. D., in Albany, N. Y., July 13; b. there Aug. 13, 1809; fitted for college at Washington Academy, Cambridge, N. Y.; entered Middlebury College but graduated at Amherst College in 1831; was admitted to the bar in 1836. He inherited large wealth from his father, and his life was chiefly spent in the care of the estate and in philanthropic works. Besides liberal gifts to other causes, he gave to education $50,000 for the founding of a professorship of natural theology at Williams College, and $30,000 for the founding of a professorship of political economy and international law at Middlebury College.

JONES, WILLIAM ALLEN, in Bakersville, N. C., Mar. 13; b. in Raleigh, N. C., June 18, 1831; graduated at Oberlin College 1857 and was a teacher for many years.

JUMP, Dr. JULIA CHAPIN, in Oberlin, Ohio, Mar. 15; b. in Vernon, N. Y., Jan. 20, 1832; graduated at Oberlin College in 1865; taught in the public schools of Oberlin, 1865–70, and in Cleveland, Ohio, 1870–82; was a graduate of the Homeopathic Hospital College of Cleveland, and from 1884 was engaged in the practice of her profession.

KEYS, EMERSON WILLARD, in Brooklyn, N. Y., Oct. 17; b. in Jamestown, N. Y., June 30, 1828; began teaching in his native county when 16 years of age; graduated at the normal school at Albany, N. Y., in 1848; taught in several seminaries and academies until 1856; was deputy superintendent of public instruction of New York City eight years and aided in the organization of teachers' institutes; was occupied variously until 1882, and from that time until his death was chief clerk of the Brooklyn department of public instruction. He published many special reports, treatises, and other papers on educational topics, and the New York Code of Public Instruction.

KIMBALL, ALONZO SMITH, Ph. D., in Worcester, Mass., Dec. 2; b. in Center Harbor, N. H., Dec. 21, 1843; fitted for college at New Hampton (N. H.) Academy; graduated at Amherst College in 1866; principal high school, Webster, Mass., 1866–70;

teacher in Highland Military Academy, Worcester, Mass., and at the same time a student of physics in Worcester Polytechnic Institute, 1870–71; 1871–72 he was instructor of mathematics and chemistry in the last-named institution; established the department of physics there and was professor of that subject 1872–89, and was then made professor of electrical engineering also. He lectured on physics in Mount Holyoke College from 1885 to 1895, and was a trustee of that institution from 1888 until his death.

KIMBALL, Rev. JOHN, San Francisco, Cal., July 2, 1897; b. in Barton, Vt., Oct. 10, 1831; fitted for college at St. Johnsbury, Vt.; graduated at Dartmouth College 1856, and Union Theological Seminary (N. Y.) 1859; after a year's mission work in New York City, went by overland stage to California; was ordained in Sacramento 1861; pastor of churches at Grass Valley and San Francisco; 1863–64 in the service of the United States Christian Commission of the Army in the East and became chaplain of Garner Hospital, Washington, D. C.; was selected by Gen. John Eaton, then assistant commissioner of the Freedmen's Bureau for Washington and the surrounding country, as superintendent of the colored schools for Washington, Alexandria, etc., and so remained afterwards with General Howard until 1869. He did much by his skill and fidelity to put the schools on a right basis. He then returned to California; was temporary pastor of several churches and became superintendent of work among the Chinese from 1869 to 1873; from 1879 to 1897 he was associated with S. S. Smith in editing and publishing The Pacific as its managing editor, giving his services without compensation.

KNUCKY, Prof. ALBERT E., in St. George, Utah, Dec. 23; b. in Galena, Ill., about thirty-four years ago; taught in Nevada and California several years; in Utah, at Corinne, as principal of the city schools; a teacher in the public schools of Ogden; principal of Twenty-first Ward School and the Wasatch Building in Salt Lake City up to a short time before his death.

LAMBERT, THOS. SCOTT, M. D., in Stamford, Conn., Mar. 21; b. near Boston, Mass., May 22, 1819; attended Williams College and graduated in medicine at Castleton, Vt. He spent a large part of his life lecturing on anatomy and physiology and on educational topics; was the author of a text-book on anatomy.

LAMPSON, WILLIAM, in Leroy, N. Y., Feb. 14; b. there Feb. 28, 1840; graduated at Yale College in 1862 and at Columbia Law School in 1867; his time was occupied in the management of the large estate he inherited, the main part of which was bequeathed to Yale University.

LANE, GEORGE MARTIN, Ph. D., LL. D., in Cambridge, Mass., June 30; b. in Charlestown, Mass., Dec. 24, 1823; graduated at Harvard College in 1846; taught there a year and then studied at the University of Berlin and Göttingen. In 1851 he was appointed professor of Latin at Harvard; in 1869 was elected Pope professor; resigned in 1894 and was elected emeritus. To him was largely due the introduction of the Latin system of pronunciation which is now almost universal in the colleges and preparatory schools of this country.

LANGSTON, JOHN MERCER, LL. D., in Washington, D. C., Nov. 15; b. in slavery in Louisa County, Va., Dec. 14, 1829; received his early education in the schools of Cincinnati, Ohio; graduated at Oberlin College in 1849 and at the theological department in 1852; being unable to gain admission to any regular law school on account of his color, he studied for the profession privately and was admitted to the bar in 1855; practiced in the Ohio courts fifteen years and was a member of the board of education of Oberlin for a number of years; was inspector-general of the Freedmen's Bureau 1868–70; dean of the law department of Howard University 1869–76; a member of the board of health of the District of Columbia and its attorney for seven years. During 1877–85 he was minister resident and consul-general to Hayti and chargé d'affaires in Santo Domingo; on his return was three years president of the Virginia Normal and Collegiate Institute; elected to Congress in 1889. He was vice-president of Howard University and one time acting president.

LEAKE, FREDERICK, in Williamstown, Mass., May 23; b. in Albany, N. Y., Nov. 28, 1816; was educated at Albany Academy; made a considerable fortune in the banking business and devoted much time to the study of history and French literature; he was at the head of the French department at Williams College 1881–87, giving his services gratuitously.

LEONARD, STEPHEN CORNELIUS, in Orange, N. J., Feb. 11; b. in New Haven, Conn., Nov. 11, 1819; graduated at Oberlin College in 1840 and at the Theological Seminary in 1844; spent most of his life in ministerial duties; was instructor in ecclesiastical history, Oberlin Theological Seminary, 1866–70.

LINDSLEY, JOHN BERRIEN, D. D., M. D., in Nashville, Tenn., Dec. 7; b. in Princeton, N. J., Oct. 24, 1822; graduated at University of Nashville in 1839; studied medicine at the University of Louisville and graduated at the University of Pennsylvania in 1843; studied theology and was ordained in 1846; was a pupil of Gerard Troost 1838–50, succeeding his teacher as professor of chemistry in the University of Nashville. He was also chancellor of the university from 1853 to 1873, retaining his chair in chemistry until 1870. He gave $10,000 toward the erection of the main edifice of the university and its completion was largely due to his energy; was instrumental in organizing the medical department of the university in 1850, and was its first dean. For twenty-three years he gave his salary to the needs of the university; was the organizer of the Montgomery Bell Academy in accordance with the designs of the founder in 1867; participated in the founding of the Tennessee College of Pharmacy, in which he was professor of materia medica from 1876 until his death. He also occupied the chair of chemistry and State medicine in the University of Tennessee from 1880. He was a member of the Nashville board of education 1856–60; superintendent of city schools in 1860, and also secretary of the State board of education from its inception in 1875.

LOCKWOOD, WILLIAM ELLISON, in Redlands, Cal., June 23; b. in North Stamford, Conn., May 26, 1863; graduated at Yale College in 1883 and at the medical school in 1885; was an assistant in chemistry in the medical college; later an assistant in physiology, and then demonstrator in physiology. His health compelled him to remove to California, and he went into the business of raising oranges, at the same time serving as trustee of the school board of Redlands.

LORD, NATHAN LYNDS, in Rochester, Ind., Apr. 20; b. in Leyden, N. Y., Aug. 23, 1815; was fitted for college in the academies at Remsen and Lowville, N. Y., and graduated at Amherst College in 1837; taught for a number of years in Fredonia, Piermont, and Constableville, N. Y.; the rest of his life was occupied in pastoral work.

LUNT, ORRINGTON, in Evanston, Ill., Apr. 5; b. in Bowdoinham, Me., in 1815; was a founder of the Northwestern University and of its theological department. He was a member of the executive committee of the university from its incorporation and first vice-president of its trustees from 1875. He gave the institution $200,000.

LUSK, WILLIAM THOMPSON, A. M., LL. D., in New York City, June 12; b. in Norwich, Conn., May 23, 1838; studied at Yale, but left before graduation and studied medicine in Heidelberg and Berlin; served in the army 1861–63; graduated at the Bellevue Hospital Medical College in 1864, and studied further in Edinburgh, Paris, Prague, and Vienna. He was professor of physiology in the Long Island Hospital College 1868–71; lectured in Harvard Medical School 1870–71; professor of obstetrics and diseases of women and children and of clinical midwifery in Bellevue Hospital Medical College from 1871, and president of the college from 1890.

LYMAN, THEODORE, in Nahant, Mass., Sept. 10; b. in Waltham, Mass., Aug. 23, 1833; graduated at Harvard in 1855 and at the Lawrence Scientific School in 1858, and then went abroad for study; served in the civil war on the staff of Gen. George G. Meade; was fish commissioner of Massachusetts 1865–82; served in Congress in 1883; was an overseer of Harvard 1880–87; president of Boston Farm School

Digitized by Google

and trustee of the national Peabody education fund; for a time trustee of the Peabody Museum of Archæology, and later its president; was an assistant in the Museum of Comparative Zoology in Cambridge. To the last institution he left a collection of scientific books, and to Harvard $10,000. His publications were very numerous.

McCLELLAN, GEORGE BOARDMAN, in Jacksonville, Fla., Oct. 30; b. in King and Queen County, Va., July 27, 1833; graduated at Yale College in 1858; was teacher of an academy for boys in Crawfordsville, Miss., 1858–61; served in the Confederate Army; again taught in Crawfordsville, 1865–66; in Columbus, Miss., 1867–68; after briefer engagements elsewhere, was an assistant in the Central High School, St. Louis, teaching Greek and Latin, 1873-78; went to Jacksonville, Fla., in 1879, and established a select private school for boys; taught in Mayport, Fla., 1883–85. He retired at this time on account of ill health.

MACDOWELL, WILLIAM ALLEN, in Uniontown, Pa., Jan. 18; b. in Allensville, Pa., July 15, 1828; graduated at Yale College in 1858; taught both before entering college and after graduation; served through the civil war; was associate principal of Tuscarora Academy at Academia, Pa., in 1868–70; was later a lawyer and editor.

McILVAINE, JOSHUA HALL, D. D., in Princeton, N. J., Jan. 30; b. in Lewes, Del., Mar. 4, 1815; graduated at Princeton College in 1837 and at the theological seminary in 1840; was occupied with ministerial duties until 1860 in Little Falls, Utica, and Rochester, N. Y.; was professor of belles-lettres at Princeton 1860–70; founded the Evelyn College for young women in 1887, and was its president until his death. He lectured before several institutions and was author of several publications.

McKEE, Mrs. OREILLE ELIZABETH BURGNER, in Portland, Mich., July 29; b. in Flat Rock, Ohio, Apr. 22, 1862; graduated at Oberlin College in 1883; taught in Chicago 1883–85, and in the public schools of Oberlin 1885–87.

MALLORY, GEORGE SCOVIL, S. T. D., LL. D., in New York City, Mar. 2; b. in Watertown, Conn., June 5, 1838; graduated at Trinity College in 1858, and at Berkeley Divinity School in 1862; was professor of ancient languages at Trinity College 1862–64, and Brownell professor of English 1864–72. In the last year he was elected a trustee and became treasurer of Trinity College. From 1866 he was an editor and part owner of The Churchman.

MAYER, Prof. ALFRED MARSHALL, Ph. D., in Maplewood, N. J., July 13; b. in Baltimore, Md., Nov. 13, 1836; left college in the middle of his course to follow the mechanical inclination of his mind, studying in the meanwhile physics and chemistry; was professor of physics and chemistry in the University of Maryland 1856–59; held the same position in Westminster College, Fulton, Mo., 1859–61; studied in the University of Paris 1863–65; was professor of physics and chemistry in Pennsylvania College, Gettysburg, Pa., nearly two years; from there went to Lehigh University, having charge of the astronomical department until 1871, and also superintending the erection of the observatory there. From 1871 until his death he occupied the chair of physics in Stevens Institute of Technology, Hoboken, N. J. He was the author of a large number of monographs and contributions to periodicals, as well as several books on scientific subjects. He was widely known on account of his experiments and observations in the realms of science.

MERRILL, Dr. WILLIAM T., in Hampton, N. H., Jan. 22; b. in Hampton Falls, N. H., in 1824; was very successful in the practice of medicine; was for a number of years president and treasurer of the Hampton school board, and trustee from 1861 of Hampton Academy; was also founder of the town's public library.

MINTON, Dr. BENJAMIN WOODBURY, in Toledo, Ohio, Jan. 28; b. in Tontogany, Ohio, Apr. 7, 1857; began teaching early, thus earning the money necessary for a higher education; graduated at Oberlin College in 1887; was principal of Loventhal Academy, Lebanon, Ky., 1887-90; studied medicine and practiced his profession.

INDEX.

A.

Abbott, Jacob and Charles, arithmetic by, 849.
Academy of Sciences and Arts of the United States, proposed, 597–598.
Adams, C. K., report on University of Wisconsin, 1984.
Adams, Daniel, arithmetic by, 815.
Adams, Frederick A., arithmetic by, 851.
Adams, H. B., on summer schools in England, Scotland, France, and Switzerland, 83–131.
Adams, Henry, quoted on Howard in eighteenth century, 609 *note*.
Adams, J. S., secretary of board of education, Vermont, 413–416.
Adams, William T., death and sketch, 2581.
Addington, Stephen, arithmetic by, 817.
Addis, W., on agricultural and mechanical colleges, 1969–1990.
Admission of foreign students to French universities, 749–776.
Agricultural academies, foreign, statistics, 1744, 1750.
Agricultural and mechanical colleges, statistics, 1969–1990.
Agricultural institutions in Europe, 223.
Agricultural schools in Argentine Republic, 1212.
Agriculture, methods of instruction in, 1575–1621.
Aikin, Henry O., death and sketch, 2581.
Aix, technical education in, 736.
Alabama, Bible reading in schools, 1553.
College presidents, 1264, 1270, 1271, 1272.
Dental laws, 1243, 1244.
Laws as to text-books, 894.
State and city school officers, 1255, 1256.
Statistics of agricultural and mechanical colleges, 1969, 1984, 1986, 1987, 1989, 1990; of city schools, 2348–2355, 2356, 2370, 2383, 2396, 2410; of colleges and universities, 1805–1847, 1848, 1868, 1890, 1898; of colored schools, 2481–2488, 2498; of commercial schools, 2452–2461, 2462; of defective classes, 2510–2512, 2513, 2515–2517, 2519; of dental schools, 1919, 1948; of kindergartens, 2542–2551, 2555, 2571; of law schools, 1917, 1930; of medical schools, 1918, 1936; of normal schools, 1994–2010, 2011, 2018, 2030; of nurse-training schools, 1920, 1957; of pharmacy schools, 1920, 1952; of secondary schools, 2053–2097, 2098, 2254, 2336; of State school system, lxiv–xcvii; of theological schools, 1916, 1922.
Teachers' certificates, 1662–1663.
Alaska, education in, 1753–1771.
Reindeer introduced, 1773–1796.
Alexander, Caleb, arithmetic by, 817.
Alfieri di Sostegno, A., death and sketch, 2608.
Algebra in secondary schools, 2046–2052, 2056, 2062, 2072, 2078, 2088.
Allen, Frederick D., death and sketch, 2581.
Allen, Harrison, death and sketch, 2581.
Allen, Horace N., schools of Korea, 1642–1644.
Alliance Française, organization and objects, 125–128.
Allyn, Robert, commissioner of schools, Rhode Island, 405.
Alsace-Lorraine, statistics of elementary education, 2612.
American Academy of Arts and Sciences, French influence in organization of, 596.
American Accomptant, account of, 811, 812.
American Arithmetics, notes on the history of, 789–868.
American Institute of Sacred Literature, 1513.
American Pharmaceutical Association, report on metric system, 1913–1914.
American Philosophical Society, English influence in organization of, 596.
American professor, An, arithmetic by, 851.
American students in German universities, 610–613.
American tutor's assistant, account of, 819.
Amherst College, astronomy in, 882.
Anacharsis of Lucian, translation from, 571–589.
Anderson, John J., arithmetic by, 851.
Anhalt, statistics of elementary education, 2612.
Ann Arbor, Bible chairs in, 1569–1571.
Anthropometrical and psycho-physical measurements of Washington school children, MacDonald on (with special index), 935–1204.
Appleton, W., religion in common schools of New England, 372.
Arabians develop arithmetic, 793.
Argentine Republic, Hilder on education in, 1205–1218.
Statistics of elementary education, 2616.
Aristotle, power in German universities, 39–40.
Arithmetic, historical sketch of, 797–802.
Arithmetics, American, notes on history of, 789–868.
Arizona, college presidents, 1264, 1272.
Corporal punishment, 1701.
Dental laws, 1243, 1244.
Laws as to text-books, 894.
State and city school officers, 1255, 1256.
Statistics of agricultural and mechanical college, 1986, 1989; of city schools, 2348–2355, 2410; of colleges and universities, 1805–1847, 1848, 1868; of colored schools, 2485–2488; of commercial schools, 2452–2461, 2462; of defective classes, 2510–2512, 2515–2517; of kindergartens, 2542–2550; of manual training, 2422, 2427, 2437; of normal schools, 1894–2010, 2011, 2018; of secondary schools, 2053–2097, 2099, 2256, 2336; of Territorial school system, lxiv–xcvii.
Teachers' certificates, 1663.
Arkansas, Bible reading in schools, 1553.
College presidents, 1264, 1270, 1272.
Dental laws, 1243, 1244.
Laws as to text-books, 894–895.
State and city school officers, 1255, 1256.
Statistics of agricultural and mechanical colleges, 1969, 1986, 1987, 1989, 1990; of city schools, 2348–2355, 2356, 2370, 2383, 2396, 2407, 2410; of colleges and universities, 1805–1847, 1848, 1858, 1890; of colored schools, 2481–2488, 2498; of commercial schools, 2452–2461, 2462; of defective classes, 2510–2512, 2513, 2515–2517, 2519; of kindergartens, 2542–2550, 2555, 2571; of law schools, 1917, 1930; of medical schools, 1918, 1936; of normal schools, 1994–2010, 2011, 2018, 2030; of secondary schools, 2053–2097, 2099, 2256, 2336; of State school system, lxiv–xcvii.
Teachers' certificates, 1664.
Armstrong, John, arithmetic by, 826.
Arnold, Edwin, arithmetic by, 856, 857.
Arnold, H. D., medical inspection of schools in Boston, 1494–1499.
Artificial production of nitrates upon a world scale, for agricultural purposes, 1721–1725.
Arts and trade school, in Uruguay, 1222.
Astronomy, the teaching of, 869–892; in primary schools, 869–871; in secondary schools, 871–879, 2046–2052, 2057, 2062, 2073, 2078, 2089; in universities and colleges, 880–889.
Athletic gymnastics, 1715–1721.
Atkins, James H., death and sketch, 2581.
Attendance, statistics of, 2337, 2356–2374.

Digitized by Google

Atwater, John P., death and sketch, 2581.
Average city school system, discussed, 2343.
Aumale, Henri E. P. L., death and sketch, 2608.
Austin, Samuel, death and sketch, 2581.
Austin, Mrs. Sarah, translates Cousin's report on Prussian schools, 623.
Australia, New Zealand, and Tasmania, systems of public education, 189–214.

Florida—Continued.
Statistics of agricultural and mechanical colleges, 1970, 1986, 1987, 1989, 1990; of city schools, 2348–2355, 2357, 2371, 2384, 2397, 2411; of colleges and universities, 1805–1847, 1850, 1870; of colored schools, 2481–2488, 2498; of commercial schools, 2452–2461, 2462; of defective classes, 2510–2512, 2513, 2515–2517, 2519; of kindergartens, 2542, 2550, 2557, 2572; of normal schools, 1994–2010, 2011, 2018, 2060; of nurse training schools, 1920, 1956; of reform schools, 2530–2531; of secondary schools, 2053–2097, 2108, 2264, 2336; of State school system, lxiv–xcvii.
Teachers' certificates, 1666–1667.
Follen, Charles, and the introduction of German at Harvard, 614–615.
Folsom, E. G., death and sketch, 2588.
Ford, Charles H., death and sketch, 2589.
Foreign influence on education in the United States, notes on, 591–629.
Foreign students, admission to French universities, 749–757
Foreign universities, and other institutions of learning, 1741–1751.
Foreign universities, list, 1741–1751.
Foreigners in universities of Europe, 1702–1708.
Forestry, New York, State College of, founder, 1799.
Forestry academies in Europe, 223; statistics, 1744, 1750.
Forseman, C. A., Bible reading in schools, 1559.
Foster, John, death and sketch, 2589.
Foster, Michael, university education, 1447–1452.
Four apple twigs, 1592–1598.
Fourton, M de, death, 2609.
Fowle, William B., arithmetic by, 828, 835.
Fowler, Abijah and Joseph, arithmetic by, 834.
Fowler, Stephen, death and sketch, 2589.
Foye, James Clark, death and sketch, 2589.
France, education in, 693–788.
Instruction in agriculture in rural schools, 1614–1620.
Statistics of elementary education, 2012.
Summer schools in, 125–128.
Francis, I, educational retrogression under, 57.
Francke, A. H., influence on German school system, 45, 49, 50, 53.
Franklin, B., visits Germany, 604–607.
Freier, F., death, 2609.
French, Frances Graham, the status of woman from the educational and industrial standpoint, 631–672.
French, George F., death and sketch, 2589.
French, John R., death and sketch, 2580.
French, advanced course in, 1425; elementary course in, 1421–1424; intermediate course in, 1424–1425.
In secondary schools, 2046–2052, 2055, 2062, 2071, 2078, 2087.
French alliance, organization and work of, for summer schools, 125–128.
French education, influence on Germany, 41.
French influence on education in United States, 594–603.
French officers in American Revolutionary army, 594.
French textile schools, 292–293.
French travelers, influence on education in United States, 594–595.
French universities, admission of foreign students to, 749–756.
Fresenius, Carl R., death and sketch, 2609.
Friedrich II and German school system, 5255.
Friedrich Wilhelm I and German school system, 45, 50, 51, 52, 56, 58.
Friedrich Wilhelm University, American students at, 612, 613.
Friends, statistics of education, 1819; of secondary schools, 2050, 2083.
Friends' mission, Alaska, 1768–1769.
Frissell, H. B., report on Hampton Institute, 1984.
Frost, John, arithmetic by, 836.

G.

Gabriel, C., death, 2609.
Gardeners' schools in Russia, 1623–1632.
Gardens, school, in Europe, 234–280.
Gault, F. B., report on University of Idaho, 1971.
Geddes, Patrick, and the Edinburgh Summer School, 110.
Geology, in secondary schools, 2046, 2052, 2058, 2063, 2074, 2079, 2090.
Geometry, in secondary schools, 2046–2052, 2056, 2062, 2072, 2078, 2088.
Georgia, Bible reading in schools, 1552, 1561.
College presidents, 1264, 1270, 1271, 1273, 1277.
Dental laws, 1243–1245.
Laws as to text-books, 896.
Laws for incorporation of educational institutions, 1467.
State and city school officers, 1255, 1257.
Statistics of Agricultural and Mechanical College, 1970, 1986, 1987, 1989, 1990; of city schools, 2348, 2355, 2357, 2371, 2384, 2397, 2407, 2411; of colleges and universities, 1845, 1847, 1850, 1870, 1890, 1898; of colored schools, 2481–2488, 2499; of commercial schools, 2452–2461, 2464; of defective classes, 2510–2512, 2513, 2515–2517, 2519; of dental schools, 1919, 1948; of kindergartens, 2542–2551, 2557, 2573; of law schools, 1917, 1939; of medical schools, 1918, 1919, 1936, 1942; of normal schools, 1994–2010, 2011, 2018, 2060; of nurse training schools, 1920, 1958; of pharmacy schools, 1920, 1952; of reform schools, 2530, 2532; of secondary schools, 2053, 2097, 2109–2112, 2264, 2336; of State school system, lxiv–xcvii; of theological schools, 1916, 1922.
Teachers' certificates, 1667.
Geography at the Edinburgh Summer School, 112–114.
Gera, Germany, commercial education, 1646–1647.
German, advanced course in, 1420–1421; elementary course in, 1409–1419; intermediate course in, 1419–1420.
In secondary schools, 2046–2052, 2056, 2062, 2072, 2078, 2088.
German and United Evangelical students, statistics of education, 1819.
German influence, on education in the United States, 603–629.
German language, study of, 42.
German literature, its introduction in England, 603–604.
German school system, its history, 3–82.
German studies of malarial disease, 1654–1656.
German textile schools, 271–272, 290.
German universities, evolution, 15–18
Power of Aristotle in, 39–40.
Germans, emigration of, to the United States considered, 593 *note*.
Germany, education of women in, 637–641.
Medical, 649.
Measurements of children in, 1124, 1132.
Relation with England in 18th century, 603.
School games in, 537–539.
Statistics of elementary education, 2012.
Supplementary and industrial education in, 1710.
Weaving schools, 1646–1647.
"Germany," the, of Madame de Staël introduces Germany to English-speaking world, 608–610, 624–625.
Ghika, Prince Ion, death, 2609.
Girard College, Bache reports on European school systems in organization of, 621–622.
Girault, A. N., translates Arnold's Arithmetic into French, 857.
Girton College, account of, 94.
Glenn, G. R., Bible reading in schools, 1553.
Gohr, Reinhold, death, 2609.
Goode, William H., death and sketch, 2589.
Goodell, Henry H., report on Massachusetts Agricultural and Mechanical College, 1973.
Goodrich, S. G., arithmetic by, 834.
Gorst, J., on elementary schools, 147.
Göttingen University visited by Franklin, 604–607.
Gough, John, arithmetic by, 814, 818.
Goulbourn, Edward M., death and sketch, 2606.
Gould, Benjamin A., death and sketch, 2589.
Gowing, Fred, Bible reading in schools, 1540–1541.
